Cylindrical Proximity Sensor E2E/E2E2

A New Series of Easy-to-use and Tough E2E/E2E2 Models

Long-size E2E2 Proximity Sensor Conforms to CENELEC

- Ideal for a variety of applications.
- With a metal connector that can be tightened securely and a cable protector.
- With an easy-to-see indicator, deeper mounting holes, and tightening flats for wrenches.
- New 3-dia. size (sensing distance: 0.6 mm) added to the lineup.

Ordering Information

<u>E2E</u>

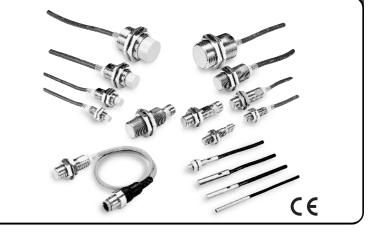

DC 2-wire/Pre-wired Models

Self-diagnostic	Size		Sensing distance	Model		
output function				NO	NC	
Yes	Shielded	M12	3 mm	E2E-X3D1S (See note 1.)		
		M18	7 mm	E2E-X7D1S (See note 1.)		
		M30	10 mm	E2E-X10D1S (See note 1.)		
	Unshielded	M12	8 mm	E2E-X8MD1S (See note 1.)		
	<u> </u>	M18	14 mm	E2E-X14MD1S (See note 1.)		
		M30	20 mm	E2E-X20MD1S (See note 1.)		
No	Shielded	M8	2 mm	E2E-X2D1-N (See notes 2 and 3.)	E2E-X2D2-N (See note 3.)	
		M12	3 mm	E2E-X3D1-N (See notes 1, 2 and 3.)	E2E-X3D2-N (See note 3.)	
		M18	7 mm	E2E-X7D1-N (See notes 1, 2 and 3.)	E2E-X7D2-N (See note 3.)	
		M30	10 mm	E2E-X10D1-N (See notes 1, 2 and 3.)	E2E-X10D2-N	
	Unshielded	M8	4 mm	E2E-X4MD1 (See notes 2 and 3.)	E2E-X4MD2	
		M12	8 mm	E2E-X8MD1 (See notes 1, 2 and 3.)	E2E-X8MD2	
		M18	14 mm	E2E-X14MD1 (See notes 1, 2 and 3.)	E2E-X14MD2	
		M30	20 mm	E2E-X20MD1 (See notes 1, 2 and 3.	E2E-X20MD2	

Note 1. In addition to the above models, E2E-X 15 models (e.g., E2E-X3D15-N), which are different in frequency from the above models, are available.

2. E2E models with a robotics cable are available as well. The model number of a model with a robotics cable has the suffix "-R" (e.g., E2E-X3D1-R).

3. Cables with a length of 5 m are also available. Specify the cable length at the end of the model number (e.g., E2E-X3D1-N 5M).

DC 2-wire/Connector Models

Connector	Self-diagnostic	Size		Sensing	Model		
	output function			distance	NO	NC	
M12	Yes	Shielded	M12	3 mm	E2E-X3D1S-M1		
			M18	7 mm	E2E-X7D1S-M1		
			M30	10 mm	E2E-X10D1S-M1		
		Unshielded	M12	8 mm	E2E-X8MD1S-M1		
			M18	14 mm	E2E-X14MD1S-M1		
			M30	20 mm	E2E-X20MD1S-M1		
	No	Shielded	M8	2 mm	E2E-X2D1-M1G	E2E-X2D2-M1G	
			M12	3 mm	E2E-X3D1-M1G (See note.)	E2E-X3D2-M1G	
			M18	7 mm	E2E-X7D1-M1G (See note.)	E2E-X7D2-M1G	
			M30	10 mm	E2E-X10D1-M1G (See note.)	E2E-X10D2-M1G	
		Unshielded	M8	4 mm	E2E-X4MD1-M1G	E2E-X4MD2-M1G	
			M12	8 mm	E2E-X8MD1-M1G (See note.)	E2E-X8MD2-M1G	
			M18	14 mm	E2E-X14MD1-M1G (See note.)	E2E-X14MD2-M1G	
			M30	20 mm	E2E-X20MD1-M1G (See note.)	E2E-X20MD2-M1G	
M8		Shielded	M8	2 mm	E2E-X2D1-M3G	E2E-X2D2-M3G	
		Unshielded	1	4 mm	E2E-X4MD1-M3G	E2E-X4MD2-M3G	

Note: In addition to the above models, E2E-X D15-M1G models (e.g., E2E-X3D15-M1G), which are different in frequency from the above models, are available.

DC 2-wire/Pre-wired Connector Models

Size	Size		Operation mode	Polarity	Model
Shielded	M12	3 mm	NO	Yes	E2E-X3D1-M1GJ
				No	E2E-X3D1-M1J-T
	M18	7 mm		Yes	E2E-X7D1-M1GJ
				No	E2E-X7D1-M1J-T
	M30	10 mm		Yes	E2E-X10D1-M1GJ
				No	E2E-X10D1-M1J-T
Unshielded	M12	8 mm		Yes	E2E-X8MD1-M1GJ
	M18	14 mm			E2E-X14MD1-M1GJ
	M30	20 mm			E2E-X20MD1-M1GJ

Note 1. A model with no polarity has a residual voltage of 5 V, which must be taken into consideration together with the interface condition (the PLC's ON voltage, for example) when connecting the Proximity Sensor to a load.

2. The standard cable length is 300 mm. Models are also available with 500 mm and 1 m cables.

Connector Pin Assignments of DC 2-wire Model

The connector pin assignments of each new E2E DC 2-wire conforms to IEC947-5-2 Table III. The following E2E models with conventional connector pin assignments are available as well.

Size		Operation mode	Model	Size		Operation mode	Model
Shielded	M8	NO	E2E-X2D1-M1	Unshielded	M8	NO	E2E-X4MD1-M1
		NC	E2E-X2D2-M1			NC	E2E-X4MD2-M1

			which the cottin							

Note 1. Use the E2E within the range in which the setting indicator (green LED) is ON (except D2 models).

2. The response speed is an average value. Measurement conditions are as follows: standard sensing object, a distance of twice the standard sensing object, and a set distance of half the sensing distance.

3. The residual voltage of each E2E model with the model number suffix "-M1J-T" is 5 V. When connecting an E2E model with the suffix "-M1J-T" to a device, make sure that the device can withstand the residual voltage.

E2E

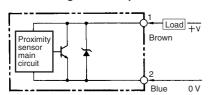

E2E-X D DC 2-wire Models

E2E-X D1 Without Diagnostic Output

- Note: 1. The load can be connected to either the +V or 0 V side. 2. The pin numbers in the above diagram
 - are for the -M \square G(J). For the -M1, pin 4 is +V and pin 3 is 0 V.

E2E-XD2 Without Diagnostic Output

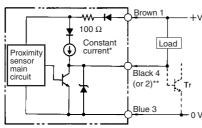

Note: 1. The load can be connected to either the +V or 0 V side.

2. The pin numbers in the above diagram are for the -MDG. For -M1 models, pin 2 is +V and pin 3 is 0 V.

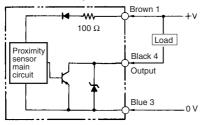

DC 3-wire Models

E2E-X E NPN Output

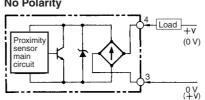

* Constant current output is 1.5 to 3 mA. ** Pin 4 is an NO contact, and pin 2 is an NC contact.

E2E-C/XCD NPN Open-collector Output

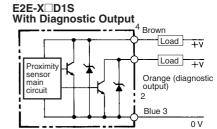

* E2E-CR6 has no 100-Ω resistance.

E2E-X D1-M1J-T No Polarity

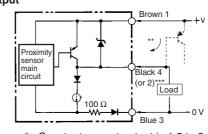

- Note: 1. The load can be connected to either the +V or 0 V side.
 - 2. The E2E-X D1-M1J-T has no polarity. Therefore, terminals 3 and 4 have no polarity.

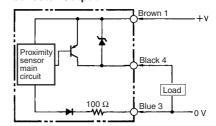

Note: Connect both the loads to the +V side of the control output and diagnostic output.

E2E-X PNP Output

- Constant current output is 1.5 to 3 mA. **
- When connecting to a Tr circuit. ***
- Pin 4 is an NO contact, and pin 2 is an NC contact.

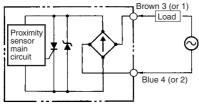

E2E-C/X B PNP Open-collector Output

E2E-CR6 has no 100- Ω resistance.

23

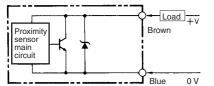

E2E-X Y AC 2-wire Models

Note: For connector models, the connection between pins 3 and 4 uses an NO contact, and the connection between pins 1 and 2 uses an NC contact.

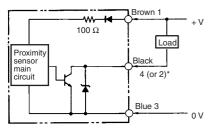

E2E2

E2E2-X D DC 2-wire Models

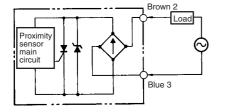

Note: The load can be connected to either the +V or 0 V side.

E2E2-X C DC 3-wire Models

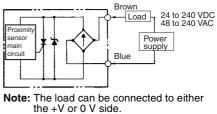

* Pin 4 is an NO contact, and pin 2 is an NC contact.

Precautions

Mounting

Do not tighten the nut with excessive force. A washer must be used with the nut.

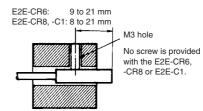

Note: The table below shows the tightening torques for part A and part B nuts. In the previous examples, the nut is on the sensor head side (part B) and hence the tightening torque for part B applies. If this nut is in part A, the tightening torque for part A applies instead.

Part B Part A

Model		Part A		Part B
		Length	Length Torque	
M5		1 N⋅m		
M8	Shielded	9 mm	9 N∙m	12 N·m
	Unshielded	3 mm		
M12		30 N⋅m		
M18		70 N·m		
M30		180 N·m		

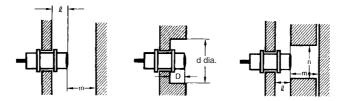

Refer to the following to mount the E2E-CR6, -CR8 and E2E-C1 non-screw models.

Tighten the screw to a torque of 0.2 N·m maximum to secure the E2E-CR6, -CR8 and a torque of 0.4 N·m maximum to secure the E2E-C1.

Influence of Surrounding Metal

When mounting the E2E within a metal panel, ensure that the clearances given in the following table are maintained. Failure to maintain these distances may cause deterioration in the performance of the sensor.

Note: Values in parentheses apply to Sensors operating at different frequencies.

This product is not designed or rated for ensuring safety of persons. Do not use it for such purposes.

■ Precautions for Safe Use

The colors in parentheses are previous wire colors.

Precautions for Correct Use

Installation

Power Reset Time

The Proximity Sensor is ready to operate within 100 ms after power is supplied. If power supplies are connected to the Proximity Sensor and load respectively, be sure to supply power to the Proximity Sensor before supplying power to the load.

Power OFF

The Proximity Sensor may output a pulse signal when it is turned OFF. Therefore, it is recommended to turn OFF the load before turning OFF the Proximity Sensor.

Power Supply Transformer

When using a DC power supply, make sure that the DC power supply has an insulated transformer. Do not use a DC power supply with an auto-transformer.

Sensing Object

Metal Coating:

The sensing distances of the Proximity Sensor vary with the metal coating on sensing objects.

35

Wiring High-tension Lines

Wiring through Metal Conduit

If there is a power or high-tension line near the cable of the Proximity Sensor, wire the cable through an independent metal conduit to prevent against Proximity Sensor damage or malfunctioning.

Cable Tractive Force

Do not pull on cables with tractive forces exceeding the following.

Diameter	Tractive force	
4 dia. max.	30 N max.	
4 dia. min.	50 N max.	

Mounting

The Proximity Sensor must not be subjected to excessive shock with a hammer when it is installed, otherwise the Proximity Sensor may be damaged or lose its water-resistivity.

Connecting Load to AC/DC 2-wire Sensor

Refer to the following before using AC or DC 2-wire Proximity Sensors.

Surge Protection

Although the Proximity Sensor has a surge absorption circuit, if there is any machine that has a large surge current (e.g., a motor or welding machine) near the Proximity Sensor, connect a surge absorber to the machine.

Leakage Current

When the Proximity Sensor is OFF, the Proximity Sensor has leakage current. Refer to page 17 and page 20 Leakage Current Characteristics. In this case, the load is imposed with a small voltage and the load may not be reset. Before using the Proximity Sensor, make sure that this voltage is less than the load reset voltage. The AC 2-wire Proximity Sensor cannot be connected to any card-lift-off relay (e.g., the G2A) because contact vibration of the relay will be caused by the leakage current and the life of the relay will be shortened.

Loads with Large Inrush Currents (E2E-X T))

Connecting a load that has a large inrush current (e.g., a lamp or motor) may result in a malfunction due to the inrush current causing a load short-circuit.

Countermeasures Against Leakage Current

AC 2-wire Models

Connect a bleeder resistor as the bypass for the leakage current so that the current flowing into the load will be less than the load reset current.

As shown in the following diagram, connect the bleeder resistor so that the current flowing into the Proximity Sensor will be 10 mA minimum and the residual voltage imposed on the load will be less than the load reset voltage.

Refer to the following to calculate the bleeder resistance and the allowable power of the bleeder resistor.

 $R \le V_{s}/(10 - I) (k\Omega)$

 $P > V_S^2/R (mW)$

36

Environment

Water Resistivity

Do not use the Proximity Sensor underwater, outdoors, or in the rain.

Operating Environment

Be sure to use the Proximity Sensor within its operating ambient temperature range and do not use the Proximity Sensor outdoors so that its reliability and life expectancy can be maintained. Although the Proximity Sensor is water resistive, a cover to protect the Proximity Sensor from water or water soluble machining oil is recommended so that its reliability and life expectancy can be maintained.

Do not use the Proximity Sensor in an environment with chemical gas (e.g., strong alkaline or acid gasses including nitric, chromic, and concentrated sulfuric acid gases).

- P: The allowable power of the bleeder resistor. (The actual power capacity of the bleeder resistor must be at least a few times as large as the allowable power of the bleeder resistor.)
- I: Load current (mA)

The following resistors are recommended. 100 VAC (supply voltage): A resistor with a resistance of 10 k Ω maximum and an allowable power of 3 W minimum 200 VAC (supply voltage): A resistor with a resistance of 20 k Ω maximum and an allowable power of 10 W minimum If these resistors generate excessive heat, use a resistor with a resistance of 10 k Ω maximum and an allowable power of 5 W minimum at 100 VAC and a resistor with a resistance of 20 k Ω maximum and an allowable power of 10 W minimum at 200 VAC instead.

DC 2-wire Models

Connect a bleeder resistor as the bypass for the leakage current so that the current flowing into the load will be less than the load reset current.

Refer to the following to calculate the bleeder resistance and the allowable power of the bleeder resistor.

 $\mathsf{R} \le \mathsf{V}_{\mathsf{S}}/(\mathsf{i}_{\mathsf{R}} - \mathsf{i}_{\mathsf{OFF}}) \ (\mathsf{k}\Omega)$

 $P > V_s^2/R (mW)$

- P: The allowable power of the bleeder resistor. (The actual power capacity of the bleeder resistor must be at least a few times as large as the allowable power of the bleeder resistor.)
- i_R: Leakage current of Sensors (mA)
- i_{OFF}: Release current of load (mA)

The following resistors are recommended.

12 VDC (supply voltage): A resistor with a resistance of 15 k Ω maximum and an allowable power of 450 mW minimum 24 VDC (supply voltage): A resistor with a resistance of 30 k Ω maximum and an allowable power of 0.1 W minimum

Connection to a PLC

Required Conditions

Connection to a PLC is possible if the specifications of the PLC and the Proximity Sensor satisfy the following conditions. (The meanings of the symbols are given below.)

- 1. The ON voltage of the PLC and the residual voltage of the Proximity Sensor must satisfy the following. $V_{ON} \le V_{CC} - V_{R}$
- 2. The OFF current of the PLC and the leakage current of the Proximity Sensor must satisfy the following.

I_{OFF ≥} I_{leak} (If the OFF current is not listed in the specifications, take it to be <u>1.3 mA</u>.)

3. The ON current of the PLC and the control output (I_{OUT}) of the Proximity Sensor must satisfy the following.

 $I_{OUT(min)} \le I_{ON} \le I_{OUT(max)}$ The ON current of the PLC will vary, however, with the power supply voltage and the input impedance used as shown in the following equation.

 $I_{ON} = (V_{CC} - V_{R} - V_{PC})/R_{IN}$

Example

In this example, the above conditions are checked for when the PLC model is the C200H-ID212, the Proximity Sensor model is the E2E-X7D1-N, and the power supply voltage is 24 V.

- **1.** V_{ON} (14.4 V) $\leq V_{CC}$ (20.4 V) V_{R} (3 V) = 17.4 V: OK
- **2.** I_{OFF} (1.3 mA) $\ge I_{leak}$ (0.8 mA): OK
- **3.** $I_{ON} = [V_{CC} (20.4 \text{ V}) V_{R} (3 \text{ V}) V_{PC} (4 \text{ V})]/R_{IN} (3 \text{ k}\Omega)$ ≈ 4.5 mA Therefore, $I_{\text{OUT}(\text{min})}$ (3 mA) $\leq I_{\text{ON}}$ (4.5 mA): OK

V_{ON}: ON voltage of PLC (14.4 V) ION current of PLC (typ. 7 mA) IOFF current of PLC (1.3 mA) R_{IN} : Input impedance of PLC (3 k Ω) V_{PC}: Internal residual voltage of PLC (4 V) V_B: Output residual voltage of Proximity Sensor (3 V) Ileak: Leakage current of Proximity Sensor (0.8 mA) Iour: Control output of Proximity Sensor (3 to 100 mA) V_{CC}: Power supply voltage (PLC: 20.4 to 26.4 V) Values in parentheses are for the following PLC model and Proximity Sensor model. PLC: C200H-ID212 Proximity Sensor: E2E-X7D1-N

Precautions for AC/DC 2-wire Proximity Sensors in Operation

Connection

Model	Connection type	Method	Description				
DC 2-wire	AND (serial connection)	Correct	The Sensors connected together must satisfy the following conditions.				
			$V_S - N \times V_R \ge$ Load operating voltage N: No. of Sensors V_R : Residual voltage of each Sensor V_S : Supply voltage				
			If each Proximity Sensor is not supplied with the rated voltage and current, the indicator will not be lit properly or unnecessary pulses may be output for approximately 1 ms.				
	OR (parallel connection)	Correct	The Sensors connected together must satisfy the following conditions.				
			N x i ≤ Load reset current N: No. of Sensors i: Leakage current of each Sensor				
			If the MY Relay, which operates at 24 VDC, is used as a load for example, a maximum of four Proximity Sensors can be connected to the load.				
AC 2-wire	AND (serial connection)		If 100 or 200 VAC is imposed on the Proximity Sensors, V_L (i.e., the voltage imposed on the load) will be obtained from the following.				
			$V_L = V_S -$ (residual voltage x No. of Proximity Sensors) (V)				
			Therefore, if V_L is lower than the load operating voltage, the load will not operate.				
			A maximum of three Proximity Sensors can be connected in series provided that the supply voltage is 100 V minimum.				

37

Model	Connection type	Method	Description				
AC 2-wire	OR (parallel connection)	Incorrect	In principle, more than two Proximity Sensors cannot be connected in parallel.				
			Provided that Proximity Sensor A does not operate with Proximity Sensor B simultaneously and there is no need to keep the load operating continuously, the Proximity Sensors can be connected in parallel. In this case, however, due to the total leakage current of the Proximity Sensors, the load may not reset properly. It is not possible to keep the load operating continuously with Proximity Sensors A and B in simultaneous operation to sense sensing objects due to the following reason.				
		A B B X, X, X					
			When Proximity Sensor A is ON, the voltage imposed on Proximity Sensor A will drop to approximately 10 V and the load current flows into Proximity Sensor A, and when one of the sensing objects is close to Proximity Sensor B, Proximity Sensor B will not operate because the voltage imposed on Proximity Sensor B is 10 V, which is too low. When Proximity Sensor B is 10 V, which is too low. When Proximity Sensor B will reach the supply voltage and Proximity Sensor B will reach the supply voltage and Proximity Sensor B will be ON. Then, Proximity Sensor A as well as Proximity Sensor B will be OFF for approximately 10 ms, which resets the load for an instant. To prevent the instantaneous resetting of the load, use a relay as shown on the left.				
DC 3-wire	AND (serial connection)	Correct	The Sensors connected together must satisfy the following conditions.				
			$ \begin{split} &i_L + (N-1) \; x \; i \leq Upper-limit \; of \; control \; output \; of \; each \\ &Sensor \\ &V_S - N \; x \; V_R \geq Load \; operating \; voltage \\ &N: \; No. \; of \; Sensors \\ &V_R: \; Residual \; voltage \; of \; each \; Sensor \\ &V_S: \; Supply \; voltage \\ &i: \; Current \; consumption \; of \; the \; Sensor \\ &i_L: \; Load \; current \\ \end{split} $				
			If the MY Relay, which operates at 24 VDC, is used as a load for example, a maximum of two Proximity Sensors can be connected to the load.

F (mm)	$12.5^{+0.5}_{0}$ dia.	$18.5^{+0.5}_{0}$ dia.	$30.5^{+0.5}_{0}$ dia.		

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS, OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.

- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- . Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

ERRORS AND OMISSIONS

The information in this catalog has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

COPYRIGHT AND COPY PERMISSION

This catalog shall not be copied for sales or promotions without permission.

This catalog is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this catalog in any manner, for any other purpose. If copying or transmitting this catalog to another, please copy or transmit it in its entirety.
