

# **Distance-settable Photoelectric Sensor**

# E3AS-L Series

# Background suppression sensor for enhanced detection low-reflectivity objects

- Equipped with Omron's proprietary light emitting element for stable detection of low-reflective workpieces
- Teaching method allows anyone to set optimal threshold values
- Manufactured using Omron's proprietary laser sealing method (IP67/IP69K/IP67G \*)
- Antifouling coating prevents contamination on the sensing surface
- IO-Link reduced time required for startups and changeovers
- \* Only for sensor units.

For the most recent information on models that have been certified for safety standards, refer to your Omron website.

The IP67G is the degree of protection which is defined according to the JIS (Japanese Industrial Standards).
 The IP67 indicates the same level of protection as defined by the IEC, and the G indicates that a device has resistance to oil.

#### **NPN Output**

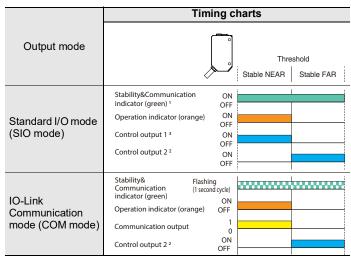

- 1. Turns off when there is insufficient margin for incident light. In that case, place the workpiece closer to ensure sufficient receiving light intensity.
- 2. The initial value of control output 2 is reverse of control output 1.

#### **PNP Output**

- 1. Standard I/O mode is used as PNP ON/OFF output.
- 2. IO-Link Communication mode is used for communications with the IO-Link Master. C/Q performs IO-Link communications. Sensor output DO performs ON/OFF output.

- Turns off when there is insufficient margin for incident light. In that case, place the workpiece closer to ensure sufficient receiving light intensity.
- 2. The initial value of control output 2 is reverse of control output 1.
- The timer function of the control output 2 can be set up by the IO-Link communications. (It is able to select ON delay, OFF delay, or one-shot function and select a timer time of 1 to 9,999 ms (T).)

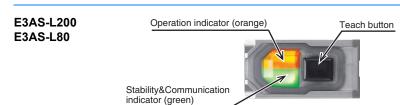

Please contact your Omron sales representative regarding the IO-Link setup file (IODD file).

**Note:** Shown above are the factory settings. Refer to the index list for the default settings at time of shipment from factory. PNP/COM output logic can be reversed by IO-Link communication.

The operation indicator (orange) lights up when control output 1 is ON or communication output is 1.

#### **Nomenclature**

Note: The indicators work differently depending on sensor status.

### **Safety Precautions**

Be sure to read the precautions for all models in the website at: http://www.ia.omron.com/.

#### **Warning Indications**

<u> </u>	Warning level Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.
	Caution level Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

#### **Meaning of Product Safety Symbols**

General prohibition Indicates the instructions of unspecified prohibited action
Caution, fire Indicates the possibility of fires under specific conditions
General Caution Indicates unspecified general alert
Caution, explosion Indicates the possibility of explosion under specific conditions

#### **⚠ WARNING**

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purpose.

Do not use the product with voltage in excess of the rated voltage.

Excess voltage may result in malfunction or fire.

#### **⚠** CAUTION

Its component may be damaged and/or degree of protection may be degraded.

Please do not apply high pressure water intensively at one place during cleaning.

#### Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

- Do not reverse the power supply connection or connect to an AC current.
- 2) Do not short the load.
- (3) Be sure that before making supply the supply voltage is less than the maximum rated supply voltage (30 VDC).
- (4) Do not use the product in environments subject to flammable or explosive gases.
- (5) Do not use the product under a chemical or an oil environment without prior evaluation.
- (6) Do not attempt to modify the product.

#### **Precautions for Correct Use**

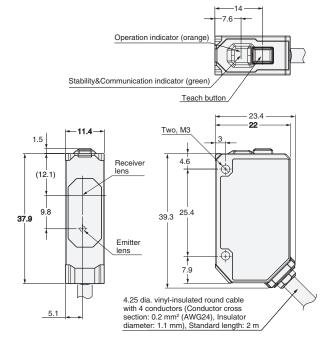

- (1) Do not hit the product using a hammer for installation.
- (2) The product must be installed with the specified torque or less. For M8 connector, the proper tightening torque is from 0.3 to 0.4 N·m. For M12 connector, the proper tightening torque is from 0.39 to 0.49 N·m. In case of M12 smartclick connector, manually tighten the connector.
- (3) Do not use the product in any atmosphere or environment that exceeds the ratings.
- (4) Output pulses may occur when the power supply is turned OFF. We recommend that you turn OFF the power supply to the load or load line first.
- (5) Use an extension cable less than 100 m long for Standard I/O mode and less than 20 m for IO-Link Communication mode.
- (6) Do not pull on the cable with excessive strength.
- (7) Please wait for at least 100 ms after turning on the product's power until it is available for use.
- (8) Though this is type IP67, do not use in the water, rain or outdoors.
- (9) If the Sensor wiring is placed in the same conduits or ducts as high-voltage or high-power lines, inductive noise may cause malfunction or damage. Wire the cables separately or use a shielded cable.
- (10) Do not use the product in locations subject to direct sunlight.
- (11) Do not use the product where humidity is high and dew condensation may occur.
- (12) Do not use the product where corrosive gases may exist.
- (13) If high-pressure washing water and so on hits the teach button, it might lead to malfunctioning. So, consider use of the key lock function.
- (14) Do not apply high-pressure washing water directly to the sensor's light emitting / receiving surface from a short distance. As the antifouling feature may be impaired, keep a sufficient distance from the light emitting / receiving surface.
- (15) Do not use the product at a location subject to shock or vibration.
- (16) To use a commercially available switching regulator, FG (frame ground) must be grounded.
- (17) Do not use organic solvents (e.g. paint thinner and alcohol) for cleaning. Otherwise optical properties and protective structure may deteriorate.
- (18) Be sure to check the influence caused by surrounding environments such as background objects and LED lighting before using the product.
- (19) Please dispose in accordance with applicable regulations.
