CSM_ES1B_DS_E_3_4

Achieve Low-cost Measurements with an Infrared Thermosensor.

- The ES1B has an electromotive output as high as that of a thermocouple, thus connecting directly to the thermocouple input terminal of the Temperature Controller is possible.
- Four temperature ranges are available to cover a wide range of temperature measurement needs, including those in the food processing, packaging, molding, and electronics industries.
- High-accuracy temperature measurement is ensured by a high-speed response of 300 ms (for a 63% response) and an indication reproducibility of $\pm 1\%$ PV.
- Unlike thermocouples, the Thermosensor does not deteriorate. Therefore, stable, real-time temperature control can be maintained.

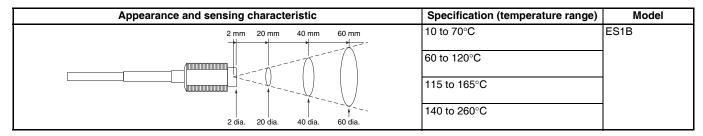

Refer to Safety Precautions for All Temperature Controllers.

When your order, specify the temperature range.

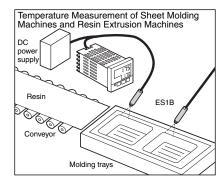

I List of Models

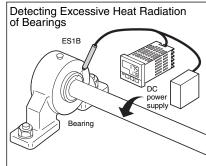

Application Examples

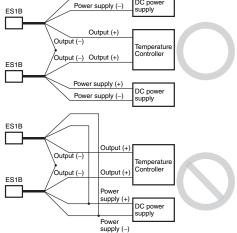

Note: 1. Either a 12 VDC or 24 VDC power supply is required for the ES1B.

2. To measure the difference in temperature between two points, use two isolated power supplies.

Do not use the Infrared Thermosensor in locations where the ambient temperature changes rapidly. To use the Infrared Thermosensor in locations subject to rapid changes in temperature due to radiant heat or movement of hot air, use a heat shield or other method to reduce rapid changes in temperature as much as possible.

- Note: 1. Based on characteristics of K-type thermocouple and radiation rate of 0.98.
 - 2. The accuracy is given as the change in temperature from any reference temperature of the sensing object. For example, if the reference temperature is 50°C, the accuracy at 55°C would be ±2% PV or ±2°C, whichever is larger and the accuracy at 60°C would be ±4% PV or ±4°C, whichever is larger.
 - 3. EN 61326-1 : Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)
