## Mounting brackets

Four types of mounting brackets provide vertical or vertical and horizontal adjustment even after mounting, making beam adjustment easier.

### Standard fixed bracket

You can slide the F3SG-R up and down to make vertical adjustments after mounting on a safety fence.

### Standard adjustable bracket (sold separately)

This bracket provides vertical as well as horizontal adjustment of  $\pm 15^\circ$ .

### Top/bottom adjustable bracket (sold separately)

Use this bracket at the top and bottom of the F3SG-R to make horizontal adjustment of  $\pm 22.5^\circ$ .

### Top/bottom adjustable bracket (for user-made mounting part) (sold separately)

The wall mounting bracket is not provided so that you can design your own wall mounting part.

## Optical synchronization – No sync lines required

Optical synchronization eliminates the need of wiring for synchronization between the emitter and receiver. The resulting flexible wiring reduces disconnection risk and avoids noise sources.

### Optical synchronization

#### Start-up

The top or bottom beam of the emitter starts synchronizing with the corresponding beam of the receiver.

#### After sync

Once synchronization is done, the emitter is kept synchronized with the receiver while at least one beam is unblocked.

## Smartclick cable connection for fast set-up

No torque-control required: the Smartclick connectors connect cables with just a 1/8th turn of the M12 waterproof connector.

\* Smartclick is a registered trademark of OMRON Corporation.

## Simple wiring thanks to reduced wiring connectors

Simple wiring makes installation faster. Fewer cables reduce disconnection risk and noise trouble.

## Data logging for quick troubleshooting

The error logs stored in the F3SG-RA can be downloaded to a PC that is connected with the F3SG-RA using the dedicated interface unit. The Configuration Tool SD Manager2 can be used to analyze errors to identify causes and solutions. The data on light intensity, power-ON time, and switching frequency can also be collected regularly for predictive maintenance.

## Bluetooth® allows to check status without stopping the line

The SD Manager2 can be used to check the status of the safety light curtain wirelessly after pairing the safety light curtain with PC via Bluetooth®, which reduces maintenance time.

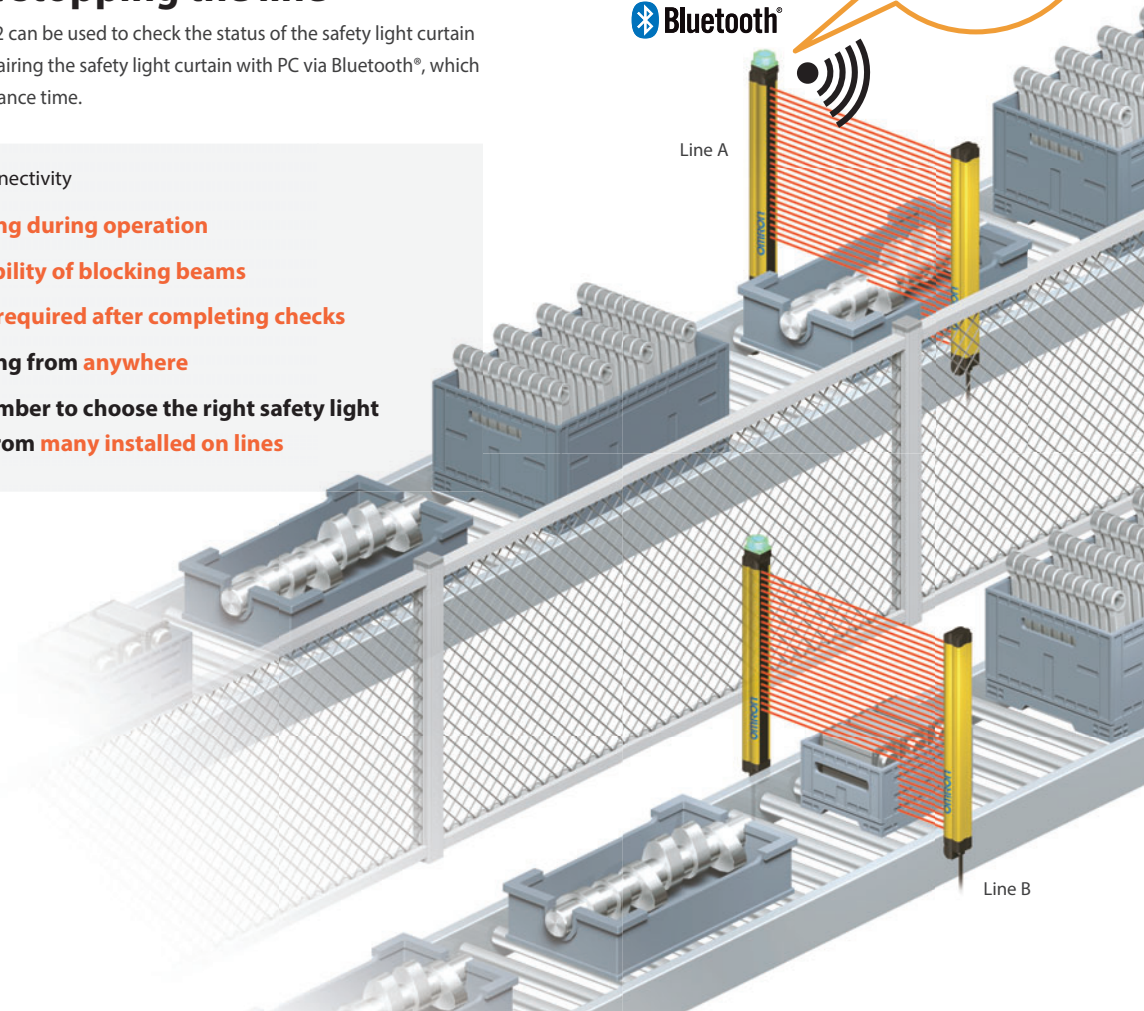

Wireless connectivity

- **Monitoring during operation**
- **No possibility of blocking beams**
- **No work required after completing checks**
- **Monitoring from anywhere**

## PNP/NPN selection

The F3SG-RA is designed to be used in a variety of environments around the world, conforming to international standards.

PNP or NPN can be selected with the DIP switch. The same cables are used

The F3SG-R conforms to major international standards including Chinese GB standards

## Global production and delivery

Omron enhanced the global production bases and local services in Japan, China, United States, and Europe to deliver Omron products quickly and reliably. Our sales network of approximately 150 offices in 40 countries and regions supports our customers.

## Troubleshooting in eight languages\*

You can find causes and solutions of errors that occur during operation on the troubleshooting webpage in eight languages. Operators across the world can check the error details in their local languages, which will help them minimize time to troubleshoot.

# Increase productivity by detecting workpieces correctly

## Muting

The F3SG-RA provides the advanced Muting function that disables beams which detect the presence of a workpiece or the position of a machine or robot. Workpieces can go in and out of a danger zone without stopping the machine.

**Conventional Muting** Muting secured safety, but the set-up was time consuming.

**F3SG-R** Two auto-configuration functions significantly reduce the adjustment time even under difficult conditions where failure is likely to occur.

Adjustment time reduced by **80%\***

\* Compared to the previous model (Omron survey as of March 2017)

### Multiple-beam sensor technology for vibrating workpieces

#### Smart muting actuator F3W-MA

The smart muting actuator extends the functions of the F3SG-R in applications where a workpiece is vibrating forward and backward. This prevents unexpected machine downtime and significantly reduces adjustment time.

### Automatic partial muting for workpieces with various heights

#### Dynamic Muting

When workpieces with various heights are conveyed on the same line, the dynamic muting function automatically sets the appropriate beams, based on the height of the object.

\* Partial muting: A function that allows specified beams (e.g., beams blocked by a workpiece) to be disabled, keeping others active, even during muting.

Easy configuration and maintenance

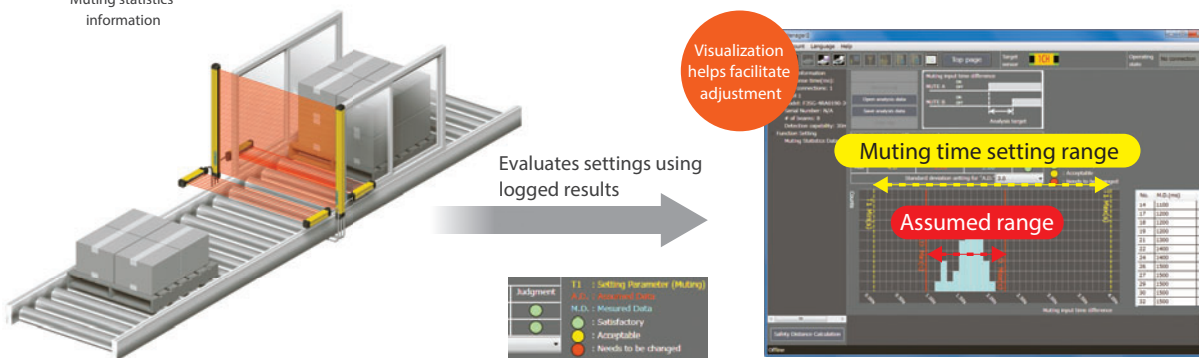

# Easy to use | Configuration Tool SD Manager2

## Minimizing setting and detection errors

Muting statistics information

The Configuration Tool SD Manager2 visualizes the installation positions and settings by logging the muting sensor operating conditions of the F3SG-R. It helps ensure reliable, first-time-right configuration.

### Examples of logging

**Judgment** ● Low risk of intermittent stop, but not safe

**Judgment** ● OK in a test run, but intermittent stop may occur during long-term operations

**Judgment** ● Test run result is out of setting range. Muting sequence error occurred

## From configuration and adjustment to maintenance

The SD Manager2 helps you to make and change settings.

**F3SG-RR**

**IP67G**

# Robust design for reliable use even in cutting oil environments

## Four times longer\* cutting oil resistance

The F3SG-RR has the ability to protect from cutting oil (IP67G) for four times longer than the previous model.

Previous model F3S-A/B **F3SG-RR**

\* Compared to the previous model (Omron survey as of March 2017)

### Unique construction

#### No gaps

The optical surface is completely covered with rubber, and the metal parts placed on the rubber are compressed and deformed to seal tightly. This construction does not use double-sided tape that oil can penetrate, preventing cutting oil from getting inside.

Patented

#### No dead space

The F3SG-R perfectly fits to machines without wasting space. Thanks to the Cascade Connection function and perfect fit installation, you can series-connect light curtains to fit various protective heights, reducing inventories.

#### The detection zone completely covers the joint

25-mm dia.

Example of 25 mm detection capability

\*1. Up to three sets of F3SG-R (up to 255 beams in total) can be series-connected.  
\*2. Protect cascading cables from cutting oil.

Reduced wiring and fast response

# Simple ON/OFF detection

## Easy version for cost-efficiency

The Easy type inherits the robust but slim housing and basic safety features of the Advanced type. Simple ON/OFF detection reduces errors, preventing productivity from dropping.

Simple safety functions to reduce errors and save costs

Reduced to just 4 wires

Fastest response time of 5 ms

## Easier to build safety circuits

Only four wires are required for the minimum configuration, which is as simple as wiring a photoelectric sensor. Simple connection with a safety controller makes it easy to build a safety circuit.

Industry's fastest class\*

## Fastest response time of 5 ms

The Easy type that allows the distance between the light curtain and hazard source to be reduced is ideal for the use in a small machine.

Configure functions with the DIP Switches before wiring.

#### Wiring Example

S1: Test Switch (Connect the line to 0 V if this switch is not required)

S2: Lockout/Interlock Reset Switch, Override Switch or Override Cancel Switch

\*1. Also used as Override input line.

\*2. Make sure to connect an override cancel switch to the Reset line when using the override function. Otherwise the override state may not be released by the override cancel switch, resulting in serious injury.

\*3. Refer to page 30 for more information.

\*4. The safety controller and the F3SG-RA must share the power supply or be connected to the common terminal of the power supply.

\*5. Refer to *Smart Muting Actuator F3W-MA Series User's Manual* for more information.

\*6. The functions are configurable with DIP Switch. Refer to *Safety Light Curtain F3SG-R Series User's Manual* for more information on setting the functions by the DIP Switch.

\*7. When connecting to the PLC, the output mode must be changed with the Configuration Tool according to your application.

**Note:** Functional earth connection is unnecessary when you use the F3SG-RA in a general industrial environment where noise control or stable power supply is considered. However, when you use the F3SG-RA in an environment where there may be excessive noise from surroundings or stable power supply may be interfered, it is recommended the F3SG-RA be connected to functional earth. The wiring examples in later examples do not indicate functional earth. To use functional earth, wire an earth cable according to the example above. Refer to *Safety Light Curtain F3SG-R Series User's Manual* for more information.

- S3: Lockout/Interlock Reset Switch or Override Switch
- S4, S5: Muting sensor
- KM1, KM2: Safety relay with forcibly guided contacts (G7SA) or magnetic contactor
- M: Motor

- \*1. Also used as Override input line.
- \*2. Make sure to connect an override cancel switch to the Reset line when using the override function. Otherwise the override state may not be released by the override cancel switch, resulting in serious injury.
- \*3. The functions are configurable with DIP Switch. Refer to *Safety Light Curtain F3SG-R Series User's Manual* for more information on setting the functions by the DIP Switch.
- \*4. When connecting to the PLC, the output mode must be changed with the Configuration Tool according to your application.

# Connections (Basic Wiring Diagram)

## Short Mode

\*1.Refer to page 82 for more information.

\*2.The safety controller and the F3SG-RE must share the power supply or be connected to the common terminal of the power supply.

**Note:** Functional earth connection is unnecessary when you use the F3SG-RE in a general industrial environment where noise control or stable power supply is considered. However, when you use the F3SG-RE in an environment where there may be excessive noise from surroundings or stable power supply may be interfered, it is recommended the F3SG-RE be connected to functional earth. The wiring examples in later examples do not indicate functional earth. To use functional earth, wire an earth cable according to the example above. Refer to *Safety Light Curtain F3SG-R Series User's Manual* for more information.

## Long Mode

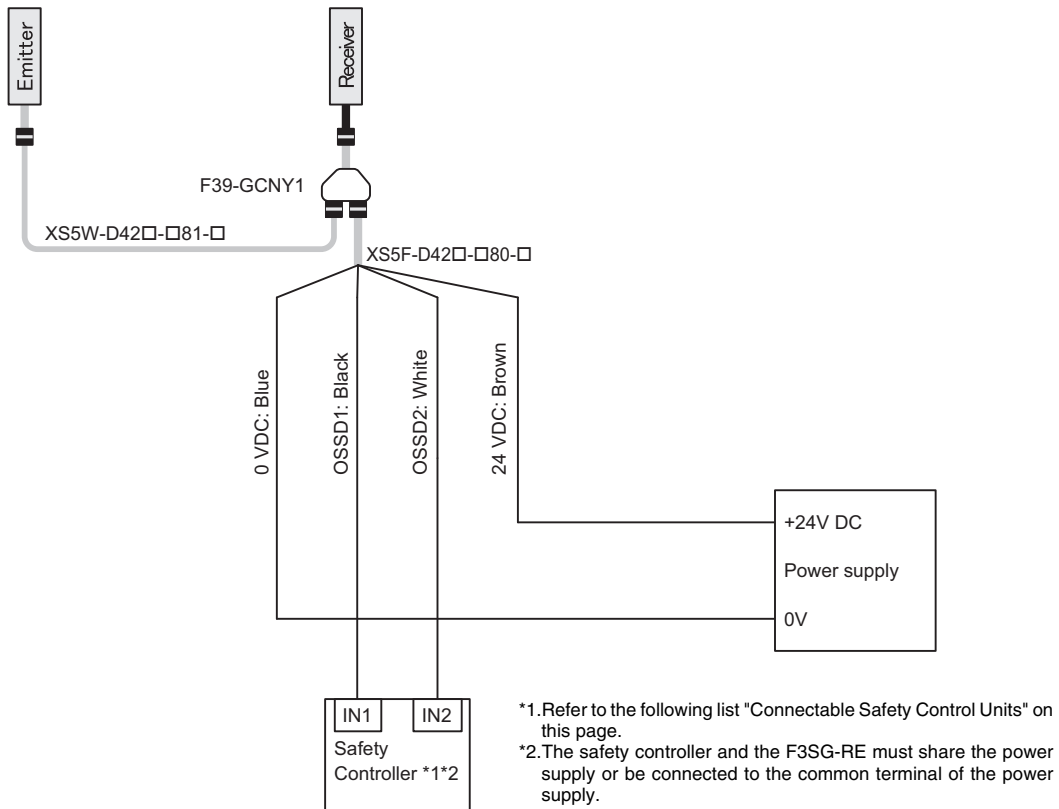

\*1.Refer to page 82 for more information.

\*2.The safety controller and the F3SG-RE must share the power supply or be connected to the common terminal of the power supply.

**Note:** For the functional earth connection, refer to the Short Mode example.

## Standalone F3SG-RE with Y-Joint Plug/Socket Connector

- Note:** 1. When using the reduced wiring connector system F39-GCNY1, the Operating Range Selection is fixed to Long Mode.  
 2. For the functional earth connection, refer to the Short Mode example.

E1: 24VDC power supply (S8VS)

**Note:** Functional earth connection is unnecessary when you use the F3SG-RA-01TS in a general industrial environment where noise control or stable power supply is considered. However, when you use the F3SG-RA-01TS in an environment where there may be excessive noise from surroundings or stable power supply may be interfered, it is recommended the F3SG-RA-01TS be connected to functional earth. The wiring examples in later examples do not indicate functional earth. To use functional earth, wire an earth cable according to the example above. Refer to *Safety Light Curtain F3SG-4RA□□□□-25-01TS Series User's Manual* for more information.

## Connections (Basic Wiring Diagram)

### Standalone F3SG-RA-02TS

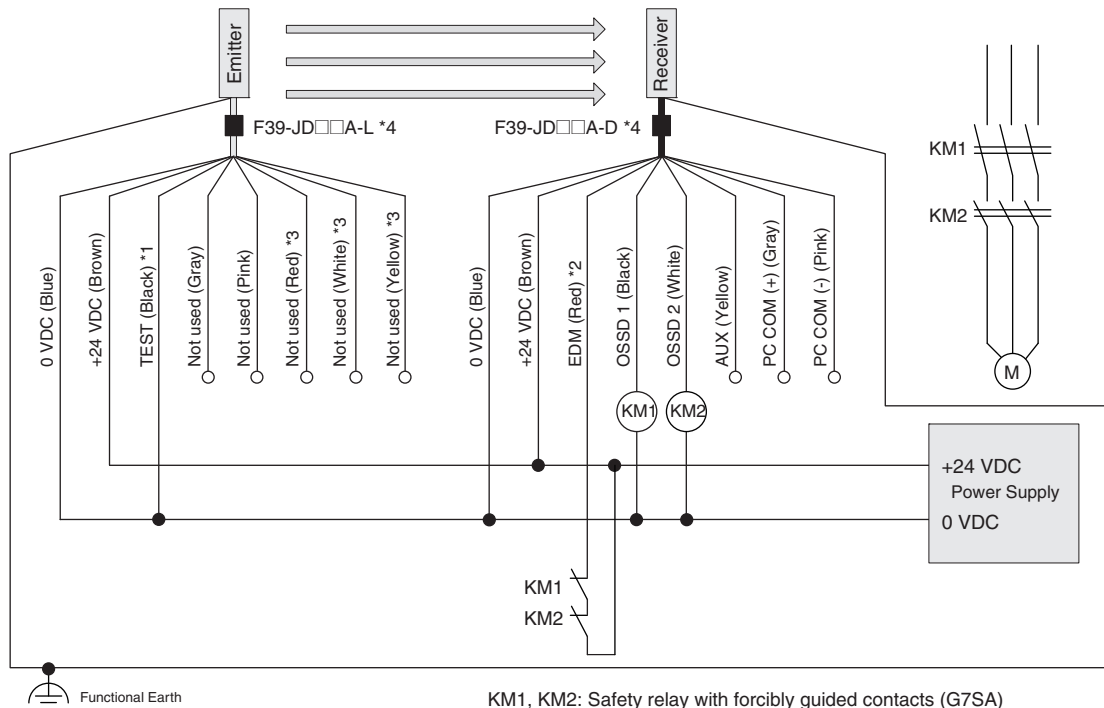

#### EDM used and External Test in 24V Active not used

The following is the example of External Device Monitoring used and External Test in 24 V Active not used.

#### Settings

	Function
Receiver	EDM
Emitter	External Test: 24 V Active (End Cap: Black) (factory default setting)

#### Wiring Example

KM1, KM2: Safety relay with forcibly guided contacts (G7SA)  
M: Motor

- \*1. Connect the line to 24 V via a test switch (N.O. contact) if External Test is used.
- \*2. Connect a lockout reset switch (N.C. contact) to this line in series with the KM1 and KM2 if Lockout Reset is used.
- \*3. The F39-JD□□RA-L Single-Ended Cable for Emitter (Oil-Resistant Cable) does not have the red, white and yellow wires.
- \*4. For the F39-JD□□A-□ Single-Ended Cable, connect the shield line to 0 V.

**Note:** Functional earth connection is unnecessary when you use the F3SG-RA-02TS in a general industrial environment where noise control or stable power supply is considered. However, when you use the F3SG-RA-02TS in an environment where there may be excessive noise from surroundings or stable power supply may be interfered, it is recommended the F3SG-RA-02TS be connected to functional earth.

The wiring examples in later examples do not indicate functional earth. To use functional earth, wire an earth cable according to the example above. Refer to *Safety Light Curtain F3SG-RA-02TS Series User's Manual* for more information.

## Sensor Mounting Brackets

Appearance	Specification	Application	Remarks	Model
	Standard Fixed Bracket	Bracket to mount the F3W-MA. Side mounting and backside mounting possible.	Two brackets per set	<b>F39-LGF</b>
	Standard Adjustable Bracket	Bracket to mount the F3W-MA. Beam alignment after mounting possible. The angle adjustment range is $\pm 15^\circ$ . Side mounting and backside mounting possible.	Two brackets per set	<b>F39-LGA</b>
	F3W-MA Bracket	Bracket to fix the F3W-MA to the F3SG-RA. F39-LGMAL: L-shaped configuration F39-LGMAT: T-shaped configuration Beam alignment after mounting possible. When using the F3W-MA Bracket, it is necessary to add an extra Standard Adjustable Bracket (F39-LGA) to the F3SG-RA. * Please also purchase Standard Adjustable Bracket (F39-LGA).	Two brackets per set	<b>F39-LGMAL</b>
				<b>F39-LGMAT</b>

**Note:** When mounting an F3W-MA0300P in the L-shaped configuration, the shock resistance becomes as follows.

Shock resistance: 50 m/s<sup>2</sup>, 1000 shocks for all 3 axes

For mounting an F3W-MA0300P under a shock environment exceeding this, the F3W-MA Bracket cannot be used. Use a Standard Adjustable Bracket (F39-LGA).

\* When using F39-LGMA□, there are some restrictions on the brackets to mount the F3SG-RA. This bracket is not usable together with F39-LGF. When using together with the F39-LGA, the protective height of the F3SG-RA must be 270 mm or longer. When using together with F39-LGTB, the protective height of the F3SG-RA must be 400 mm or longer. An extra F39-LGA is required for reinforcement, depending on the mounting position of the F39-LGMA□. Refer to "Dimensions" on page 159 for details.
