Low Signal Relay

## World's Standard Model G6A!

- Resistant to electromagnetic interference, enables high-density mounting.
- Impulse withstand voltage of $\mathbf{1 , 5 0 0 V}$ meets FCC requirements.
- Gold-clad twin-contacts provide short contact bounce in addition to its high contact reliability.
- A variety of products that cover a wide range of use.

## RoHS Compliant

## Model Number Legend

## G6A $\frac{\square}{1}-\frac{\square}{2} \frac{\square}{3} \frac{\square}{4} \frac{\square}{5}-\frac{\square-}{6} \frac{\square}{7}$

1. Relay Function

None : Single-side stable
U : Single-winding latching
K : Double-winding latching
2. Contact Form

2: DPDT (2c)
3. Contact Type

7: Bifurcated crossbar Ag (Au-Alloy)
4. Protective Structure

4: Fully sealed
5. Terminal Shape

P: PCB Terminals
6. Classification

None : Standard
ST : Stand-off 0.64 mm
15 : High-sensitivity ( 150 mW )
40 : Low-sensitivity
(Single-side Stable: 400 mW Double-winding Latching: 360 mW )

## 7. Approved Standards

None : Standard
US : UL/C-UL

## ■Ordering Information

oUL/C-UL Certified Models

| Relay Function | Classification | Contact form | Model | Rated coil voltage (VDC) | Minimum packing unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Single-side Stable Type | Standard | DPDT (2c) | G6A-274P-ST-US | 3, 4.5, 5, 6, 9, 12, 24 | 25 pcs/tube |
|  |  |  |  | 48 |  |
|  | Low-sensitivity |  | G6A-274P-ST40-US | 3, 5, 6, 9, 12, 24 |  |
|  |  |  |  | 48 |  |
|  | High-sensitivity |  | G6A-274P-ST15-US | 3, 5, 6, 9, 12, 24 |  |
|  |  |  | G6A-274P-ST15-US | 48 |  |
| Single-winding Latching Type | Standard |  | G6AU-274P-ST-US | 3, 4.5, 5, 6, 9, 12, 24 |  |
|  |  |  |  | 48 |  |
| Double-winding Latching Type | Standard |  | G6AK-274P-ST-US | 3, 4.5, 5, 6, 9, 12, 24 |  |
|  |  |  |  | 48 |  |
|  | Low-sensitivity |  | G6AK-274P-ST40-US | 3, 5, 6, 9, 12, 24 |  |
|  |  |  |  | 48 |  |

Note: When ordering, add the rated coil voltage to the model number.
Example: G6A-274P-ST-US DC3
L_ Rated coil voltage
However, the notation of the coil voltage on the product case as well as on the packing will be marked as $\square \square$ VDC.

Ratings

## ■Characteristics

| Item Classification |  | Single-side Stable | Single-winding Latching | Double-winding Latching |
| :---: | :---: | :---: | :---: | :---: |
| Contact resistance *1 |  | $50 \mathrm{~m} \Omega$ max. |  |  |
| Operate (set) time |  | 5 ms max. | 5 ms max . |  |
| Release (reset) time |  | 3 ms max . | 5 ms max . |  |
| Min. set/reset signal width |  | - | 10 ms |  |
| Insulation resistance *2 |  | 1,000 $\mathrm{M} \Omega \mathrm{min}$. (at 500 VDC ); except for set-reset |  |  |
| Dielectric strength | Between coil and contacts | 1,000 VAC, 50/60 Hz for 1 min |  |  |
|  | Between contacts of the same polarity | 1,000 VAC, 50/60 Hz for 1 min |  |  |
|  | Between contacts of different polarity | 1,000 VAC, $50 / 60 \mathrm{~Hz}$ for 1 min |  |  |
|  | Between set and reset coils | - | - | 250 VAC, $50 / 60 \mathrm{~Hz}$ for 1 min |
| Impulse withstand voltage |  | $1,500 \mathrm{~V}(10 \times 160 \mu \mathrm{~s})$ (conforms to FCC Part 68) |  |  |
| Vibration resistance | - Destruction | 10 to 55 to $10 \mathrm{~Hz}, 2.5 \mathrm{~mm}$ single amplitude ( 5 mm double amplitude) |  |  |
|  | Malfunction | 10 to 55 to $10 \mathrm{~Hz}, 1.65 \mathrm{~mm}$ single amplitude ( 3.3 mm double amplitude) |  |  |
| Shock resistance | Destruction | $1,000 \mathrm{~m} / \mathrm{s}^{2}$ |  |  |
|  | Malfunction | $500 \mathrm{~m} / \mathrm{s}^{2}$ | $300 \mathrm{~m} / \mathrm{s}^{2}$ |  |
| Durability | Mechanical | 100,000,000 operations min. (at 36,000 operations/hr) |  |  |
|  | Electrical | 500,000 operations min. (at 1,800 operations/hr) |  |  |
| Failure rate (P level) *3 |  | $10 \mu \mathrm{~A}$ at 10 m VDC |  |  |
| Ambient operating temperature |  | $-40^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ (with no icing or no condenstion) |  |  |
| Ambient operating humidity |  | 5\% to 85\% |  |  |
| Weight |  | Approx. 3.5 g |  |  |

[^1]*1. The contact resistance was measured with 10 mA at 1 VDC with a voltage drop method.
*2. The insulation resistance was measured with a 500 VDC megohmmeter applied to the same parts as those used for checking the dielectric strength (except between the set and reset coil).
*3. This value was measured at a switching frequency of 60 operations $/ \mathrm{min}$ and the criterion of contact resistance is $50 \Omega$. This value may vary, depending on switching frequency, operating conditions, expected reliability level of the relay, etc. It is always recommended to double-check relay suitability under actual load conditions.

## IEngineering Data

## -Maximum Switching Power

-Ambient Temperature vs. Maximum Coil Voltage

Note: "Maximum voltage" is the maximum voltage that can be applied to the Relay coil.

## OShock Malfunction

## G6A-274P

-Durability

-Ambient Temperature vs. Must Operate or Must Release Voltage

Test Conditions: Shock is applied in $\pm X, \pm Y$, and $\pm Z$ directions three times each with and without energizing the Relays to check the number of contact malfunctions.

## -Electrical Durability Test *1

## -Contact Reliability Test *1, *2

*1. The tests were conducted at an ambient temperature of $23^{\circ} \mathrm{C}$.
*2. The contact resistance data are periodically measured reference values and are not values from each monitoring operation. Contact resistance values will vary according to the switching frequency and operating environment, so be sure to check operation under the actual operating conditions before use.

## OMutual Magnetic Interference

## -High-frequency Characteristics

- Measurement Conditions

Terminals which were not being measured were terminated with $50 \Omega$.
Measuring impedance: $50 \Omega$
Note: The high-frequency characteristics data were measured using a dedicated circuit board and actual values will vary depending on the usage conditions. Check the characteristics of the actual equipment being used.

OHigh-frequency Characteristics (Isolation) *1, *2

OHigh-frequency Characteristics (Insertion Loss) *1, *2

OHigh-frequency Characteristics
(Return Loss, V.SWR) *1, *2

*1. The tests were conducted at an ambient temperature of $23^{\circ} \mathrm{C}$.
*2. High-frequency characteristics depend on the PCB to which the Relay is mounted. Always check these characteristics, including durability, in the actual machine before use.

## Precautions

-Please refer to "РСВ Relays Common Precautions" for correct use.

## Correct Use

-Long-term Continuously ON Contacts
Using the Relay in a circuit where the Relay will be ON continuously for long periods (without switching) can lead to unstable contacts because the heat generated by the coil itself will affect the insulation, causing a film to develop on the contact surfaces. We recommend using a latching relay (magnetic-holding relay) in this kind of circuit. If a single-side stable model must be used in this kind of circuit, we recommend using a fail-safe circuit design that provides protection against contact failure or coil burnout.

## -Relay Handling

When washing the product after soldering the Relay to a PCB, use a water-based solvent or alcohol-based solvent, and keep the solvent temperature to less than $40^{\circ} \mathrm{C}$. Do not put the Relay in a cold cleaning bath immediately after soldering.

## -Double-switching load in two poles

Double-switching in two poles as shown in the figure below, one pole and two pole interval may become MBB (Make Before Break) mechanically according to the timing of the point of contact switching (By the short-circuit mode), and the malfunction might be caused.
In such a circuit, direct electric switching should be avoided, and concern for contact to be carried after the contact of Relay absolutely switches in condition of no load.

[^2]Note: Do not use this document to operate the Unit.
