Solid-state Counter
H7CN

All Required Counter Functions Incorporated in a Compact DIN-sized (48 × 48) Housing

- In addition to Up and Down models, a reversible (Up-Down) counter is also available
- Maximum counting speed of 5,000 cps, never before attained by a small-size preset counter
- Power supply freely selectable within a range of 100 to 240 VAC. Also, power supply for the DC-operated models is selectable within a range of 12 to 48 V
- Models with memory backup function against power failure available

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Ordering Information

Classification	Preset Counter								Totalizing Counter
Input signal system (Count & reset inputs)	Contact, Transistor								Contact/Transistor
Mounting method	Flush mounting, surface mounting								
Display	7-segment LEDs (10 mm high), Up indicator								7-segment LEDs (10 mm high)
Number of digits	4 digits (0 to 9,999)								
Backup power for memory protection	No		Yes (100 to 240 VAC only)		No				Yes
Control output	Contact (SPST-NO)		Contact (SPDT)		Contact (SPST-NO)		Transistor (open-collector)		---
Operating mode	Up counting	Down counting	Up counting	Down counting	Reversible counting, command input	Reversible counting, individual input	Up counting	Down counting	Up counting
Max. counting speed — 30 cps	H7CN-XLN	H7CN-YLN	H7CN-XLNM	H7CN-YLNM	H7CN-ALN	H7CN-BLN	---	---	H7CN-TXL
Max. counting speed — 5 kcps (see note 1.)	H7CN-XHN	H7CN-YHN	H7CN-XHNM	H7CN-YHNM	H7CN-AHN	H7CN-BHN	H7CN-XHNS	H7CN-YHNS	H7CN-TXH

Note: 1. Only the transistor input signal is available when the maximum counting speed is 5,000 cps
     2. Specify the power supply voltage when ordering.

■ Accessories (Order Separately)

Protective Cover	Hard	Y92A-48B
	Soft	Y92A-48D
Flush Mounting Adapter	Y92F-30	

Sockets

Applicable Counter	Track Mounted Socket	Back Connecting Socket
H7CN-□□	P2CF-08(-E)	P3G-08
H7CN-□□M	P2CF-11(-E)	P3GA-11

Specifications

■ Ratings

Supply voltage	24, 100 to 240 VAC 50/60 Hz 12 to 48 VDC (contains 20% ripple max.) (see note 1)
Operating voltage range	85% to 110% of rated voltage
Power consumption (see note 2)	Approx. 12 VA/2.5 W (at 240 VAC, 50Hz) Approx. 2.5 W (at 48 VDC)
Count and reset input	Impedance by short-circuiting contacts: 1 kΩ max. Residual voltage: 2 V max. Impedance by opening contacts: 100 kΩ min.

Max. counting speeds of count input	30 cps (contact and transistor inputs)
	      Minimum pulse width: 16.7 ms (ON/OFF ratio: 1:1)
	5.000 cps (transistor inputs)
	      Minimum pulse width: 0.1 ms (ON/OFF ratio: 1:1)

Reset system	Power-OFF reset
	      Reset time: 0.5 s
	      Reset time following power application 0.05 s
	External reset & manual reset
	      Reset time: 0.02 s
	      Reset time following signal application: 0.05 s

Control output	Contact (SPDT) output:
	      3 A, 250 VAC, cosφ = 1 (resistive load)
	Transistor (open collector) output:
	      30 VDC MAX. 100 mA max.

Case color	Light gray (Munsell 5Y7/1)

Note: 1. The memory backup function is not available for this DC supply voltage range.

     2. On power application, an inrush current of approximately 10 times the normal current flows through the Counter.
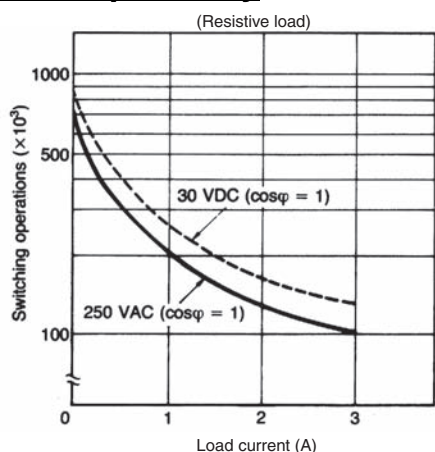

■ Characteristics

Item	Preset Counter	Totalizing Counter
Insulation resistance	100 MΩ min. (at 500 VDC) (between current-carrying terminal and exposed non-current-carrying metal parts, and between non-continuous contacts)	100 MΩ min. (at 500 VDC) (between current-carrying terminal and exposed non-current-carrying metal parts)
Dielectric strength	2,000 VAC, 50/60 Hz for 1 min (between current-carrying terminal and exposed non-current carrying metal parts and between non-continuous contacts)	2,000 VAC, 50/60 Hz for 1 min (between current-carrying terminal and exposed non-current carrying metal parts)
Impulse withstand voltage	6 kV (between power terminals) 6 kV (between current-carrying terminal and exposed non-current-carrying metal parts)	
Noise immunity	±2 kV (between power terminals), ±500 V (between input terminals), square-wave noise by noise simulator	
Static immunity	Malfunction: 8 kV	
Vibration resistance	Destruction: 10 to 55 Hz, 0.75-mm single amplitude Malfunction: 10 to 55 Hz, 0.5-mm single amplitude	
Shock resistance	Destruction: 300 m/s^2 (approx. 30G) Malfunction: 100 m/s^2 (approx. 10G)	
Ambient temperature	Operating: −10°C to 55°C (with no icing) Storage: −25°C to 65°C (with no icing)	
Ambient humidity	35% to 85%	
Life expectancy	Mechanical: 10 million operations min. Electrical: 100,000 operations min. (3 A at 250 VAC, resistive load)	---
Weight	Approx. 110 g	

■ Applicable Standards

■ Protective Cover

The Protective Cover shields the front panel, particularly the count value setting section from dust, dirt and water, and prevent malfunctioning of the Counter due to static electricity.

Note: 1. The Hard Protective Cover prevents the set count value from being altered due to accidental contact with the push-type thumbwheel switch.

2. The Soft Protective Cover allows the set value to be set by depressing the thumbwheel switches through it.
It may be, however, difficult to make setting changes of the Counter with the Y92A-48B Protective Cover attached, which must be taken into consideration before using the Y92A-48B Protective Cover.

Power input

Note: 1. Terminal 2 is a negative terminal and terminal 7 is a positive terminal if DC power is supplied.

2. Common terminal 1 is internally connected to terminal 2 if the Counter is a model that operates with DC.

Note: 1. Terminal 2 is a negative terminal and terminal 7 is a positive terminal if DC power is supplied.

2. Common terminal 1 is internally connected to terminal 2 if the Counter is a model that operates with DC.

Connections

■ Power Supply Connection

For Models with No Backup Function

AC Power Supply

100 to 240 VAC

DC Power Supply

12 to 48 VDC

For Models with Backup Function
100 to 240 VAC

Note: 1. Make sure that the fluctuation of the supply voltage is within the permissible range.

2. Pay attention to the polarity of the DC power supply and do not make a wiring mistake.
■ Input Connection

The CP1 and CP2 reset inputs of the H7CN will be active when input to the H7CN is short-circuited.
Transistor Input (NPN)

*Operate with transistor ON

+V (30 V max.)
Sensor
*Operate with transistor ON

Contact Input

*Operate with contact ON

* Refer to the following for the signal
  levels of the transistor input.

Note: 1. H level with transistor
  ON.Residual voltage: 2 V
  max.ON impedance: 1 kΩ max.

2. L level with transistor OFF.OFF
  impedance: 100 kΩ min.

* Sensors with voltage output can be
  connected to the H7CN as shown in
  the above circuit diagram. When
  transistor is OFF, make sure that the
  voltage between the input common
  and CP1 or CP2 terminals are 4 V
  min. for AC models and 6 V min. for
  DC models.

* Make sure that the contact can switch
  0.5 mA at 5 V with ease.

■ Output (Load) Connection

Contact Output

Load
250 VAC max.

Transistor Output

Load
30 VDC max.
*Diode to absorb counter-electromotive force

Delay Time

The delay time, which is the period between the moment a pulse
input signal that coincides with the preset value is ON and the
moment the corresponding control output signal is ON, varies with
the counting speed and type of output as shown in the following
table.

Control output	Max. counting speed	Delay time
Contact output	30 Hz (cps)	12.5 to 15.0 ms
	5 kHz (cps)	4.0 to 5.5 ms
Transistor output	5 kHz (cps)	0.05 to 0.25 ms

Safety Precautions

● **Be sure to read the precautions for all Counters in the website at: http://www.ia.omron.com/.**

Warning Indications

⚠ CAUTION	Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

⚠	Used to warn of the risk of electric shock under specific conditions.
🚫	Used for general prohibitions for which there is no specific symbol.
❗	Used for general mandatory action precautions for which there is no specified symbol.

⚠ CAUTION

Do not touch the terminals while power is being supplied. Doing so may occasionally result in minor injury due to electric shock.

Do not use the product where subject to flammable or explosive gas. Otherwise, minor injury from explosion may occasionally occur.

Never disassemble, modify or repair the product or touch any of the internal parts. Minor electric shock, fire, or malfunction may occasionally occur.
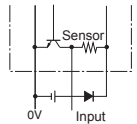

The life expectancy of output relays varies considerably with the output load and switching conditions. Always consider the application conditions and use the output relays within their rated load and electrical life expectancy. If the output relays are used past their life expectancy, contact fusing or burning may occasionally occur. Also, never exceed the rated load current. When using a heater, surely use a thermo switch in the load circuit.

Tighten the screws to between 0.74 and 0.90 N·m. Loose screws may occasionally result in fire.

Do not allow pieces of metal, wire clippings, or fine metallic shavings from installation to enter the product. Doing so may occasionally result in electric shock, fire, or malfunction.

### Precautions for Safe Use

- Make sure the proper product is specified for the application.
- For correct use, do not subject the product to the following conditions.
  - Dramatic temperature fluctuations
  - High humidity or where condensation may occur
  - Severe vibration and shock
  - Where excessive dust, corrosive gas, or direct sunlight may be present
- This product is not waterproof or oil resistance. Do not use the product in any of the places subject to splashing liquid or oil atmosphere.
- Use and store the product within the rated ranges given for the product model you are using. If necessary, use forced cooling. If the product is stored below −10°C, allow it to warm up for three hours at room temperature before turning ON the power supply.
- Do not cover the vent holes on the products and the area around the product in order to ensure thermal dissipation.
- Wiring all terminals correctly.
- Do not wire the terminals which are not used.
- Use specified size crimped terminals (M3.5, thickness 7.2mm max.) for wiring with a gage of AWG 24 to AWG 18 (equal to a cross section area of 0.205 to 0.823mm2). (The wiring stripping length is 5 to 6mm.) Up to two wires of same size and type, or two crimped terminals can be inserted into a single terminal.
- Use this product within the rated power supply voltage and control output.
- Use a switch, relay, or other contact to turn the power supply ON instantaneously. If the voltage is applied gradually, the power may not be reset or output malfunctions may occur.
- Do not apply the supply voltage directly from external to transistor output.
- Interlock the power to the product with a relay so that the product will not be left in an output on condition for long periods. Leaving the product in an output-on condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.
- A constant reading system is used in the present counter, so settings can be changed while power is being supplied, but the output will turn ON if the set value is set to the current measurement value.
- When changing the set count while power is being supplied, an inadequate push of the thumb wheel switches will display two numbers in one display window, causing the operating count to drift widely. Therefore, press the thumb wheel switches surely.
- Internal circuit voltage (5 V) is output to the no-voltage input terminals, which may cause some connected devices to malfunction or fail. Check the specifications of the input device (e.g., rated output voltage or whether a power supply circuit diode is built in). To prevent power supply devices from being subjected to charging accidents, connect a diode as in the diagram figure when using a power supply voltage of 5 V or less to operate input devices that do not have a diode built into the power supply circuit.
- Check that the LED indicators are operating normally. Depending on the operating environment, the indicators and plastic parts may deteriorate faster than expected, causing the indicators to fail. Periodically perform inspections and replacements.
- Use tools when separating parts for disposal.
- When disposing of the product, observer all local ordinances as they apply.

Precautions for Correct Use

- Inrush current will be carried when turning on the power. If the capacity of the power for the product is insufficient, the product cannot start. Use a power supply, breakers, contacts which sufficient capacity.
  100 to 240 VAC specifications Approx. 0.8 A for 264 VAC
  12 to 48 VDC specifications Approx. 0.4 A for 52.8 VDC
- Since 50 ms after the power is turned ON is required as the raise time of the internal circuit voltage, note that the product may not operate in response to any input signal during this period.
- Since 50 ms after the power is turned OFF (or momentary power failures) is required as the fall time of the internal circuit voltage, note that the product may respond to input signals during this period.
- Models without power failure memory backup will operate as shown in the following figure if the power supply is momentarily interrupted.
0.5 s min.	Displays and outputs will be reset.
0.01 s max.	The status before the power interruption will be held.
0.01 to 0.5 s	Operation will be unstable, i.e., one of the above operations will be performed.

Note: Use a Counter with power failure backup memory (models ending with -M) if holding the status before the power failure is required when the power is interrupted.

- All number display digits on the Counter will be OFF when the signal is input for a external or manual reset. When the reset signal is completed, the numeric display will show the reset value.
- Model H7CN 12-48 VDC specification use transformerless power supply which the power terminals and input terminals are not insulated. When use this specification, the internal parts of the product may be occasionally burnt (damaged) if the wiring is not correct. Pay attention to check the wiring before use.

Power Failure Backup Memory

- The product memorizes the status just before occurring the electric failure memory with non-volatile memory. The rewriting lifespan of the non-volatile memory is 1,000,000 or more. The non-volatile memory rewrites the setting condition into the initial setting one when the power OFF and reset input.

■ Self-diagnostic Function

When an error has occurred, the bellow error codes are shown.

7 segment display	Count UP display	Description	Output
E 1	OFF	CPU error	OFF
E2	OFF	Memory error (RAM)	OFF
E3	OFF	Memory error (non-volatile memory)*	OFF

* Including the case when the rewriting lifespan of the nonvolatile memory is reached.

Recovery method

As an action, turn the power OFF then back ON again. If the display restored to normal, then a probable cause can be external noise affecting the system. Check for external noise. In the case of E3, if the display remains the same even when turn power ON again, input reset. After that, if it still remains the same, the product must be repaired.

■ Changes in Specifications

The Counter was upgraded in November 2005. The major changes are described below.

- **Backup Battery Connection to Counters with Memory Backup**
  Previously, an external backup battery was required for Counters with memory backup, but the Counter has been upgraded so that the external battery is no longer necessary.

⚠ Conformance to EN/IEC Standards

- When conforming to EMC standards, refer to the information provided in datasheet for cable selection and other conditions.
- This is a class A product. In residential areas it may cause radio interference, in which case the user may be required to take adequate measures to reduce interference.
- 100-240 VAC types: There is basic insulation between the power supply terminals and input terminals, and between power supply terminals and output terminals, and between input and output terminals.
  12-48 VDC types: No insulation is provided between the power supply and input terminals. There is basic insulation between power supply terminals and output terminals, and between input and output terminals.
- If double or reinforced insulation is required, use the double or reinforced insulation defined in IEC 60664 that is suitable for the maximum applied voltage for the clearance, solid insulation, and other factors.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

In the interest of product improvement, specifications are subject to change without notice.
