## omron.

## General Purpose Relay

■ Designed small, 2- and 3-pole types break 5 A loads and 4-pole type, 3 A load

- High reliability, long life

■ Ultra-high sensitivity with quick response
■ High vibration/shock resistance

- 3- and 4-pole types have an arc barrier
- UL and CSA approved
- Withstands dielectric strength of $2,000 \mathrm{~V}$

■ Relays with high-capacity, LED indicator, diode surge suppression, push-to-test button, or RC circuit are available

- Changes due to aging are negligible because of use of special magnetic mate-
 rials, thus ensuring long continuous holding time
■ Little change in characteristics such as contact follow, contact pressure, etc., throughout long life

## Ordering Information

To Order: Select the part number and add the desired coil voltage rating (e.g., MY4-DC6).

Note: 1. The rated current and coil resistance are measured at a coil temperature of $23^{\circ} \mathrm{C}\left(73^{\circ} \mathrm{F}\right)$ with tolerances of $+15 \%,-20 \%$ for AC rated current, and $\pm 15 \%$ for DC rated coil resistance.
2. The AC coil resistance and inductance are reference values at 60 Hz .
3. The performance characteristics are measured at a coil temperature of $23^{\circ} \mathrm{C}\left(73^{\circ} \mathrm{F}\right)$.
4. Because the coil is designed for low power consumption, connect a bleeder (if necessary after confirming the leakage current), when the coil is driven by an SCR.
5. For AC type latching coils, the rated current values are half-wave rectified current values measured with a DC ammeter.

## RELAY OPTIONS

## LED Indicator

Specifications and dimensions same as the standard type with the following exception. Because an LED indicator is employed as the operation indicator, the rated current is approximately 3.8 mA higher in the DC types and 0.5 to 5 mA higher in the AC types than in the standard type.
Ambient operating temperature: $-55^{\circ}$ to $60^{\circ} \mathrm{C}\left(-67^{\circ}\right.$ to $\left.140^{\circ} \mathrm{F}\right)$.

AC coil rating type

Note: 1. In MY2N and MY3N, only the contact circuit is different from the illustration below. The coil terminals 10 and 11 of MY3N become (-) and (+), respectively.
2. Pay special attention to the polarities when using the DC type.
3. The AC coil-type is provided with a self-diagnostic function that detects a breakage in the coil.

## RC Circuit

Specifications and dimensions same as the standard type with the following exceptions.
The panel cutout dimensions are the same as those of the standard type.
However, the height is higher by 17.02 mm ( 0.67 in ).

Terminal arrangement/ Internal connections
(Bottom view)

Note: 1. The above dimensioned drawing shows the 4 -pole type. The dimensions of the 2 - and 3 -pole types are identical to the 4 pole type.
2. Available on AC versions only.
3. Terminal arrangement/internal connections: MY2-Y is the same as the standard type; MY2N-Y is the same as the LED indicator type.

## Mounting holes

When mounting the relay, use the connecting socket PYC-P2 shown in "ACCESSORIES" section. The mounting hole dimensions shown here are applicable to the relay with mounting stud.

Note: The dimension drawings show the 4-pole type. The dimensions of the 2- and 3-pole types are identical to the 4-pole type.

## Diode Surge Suppression

Specifications and dimensions same as the standard type with the following exceptions.

Terminal arrangement/internal connections: MY2(N)$D(2)$ is the same as the MY4(N)-D(2) with the exception of the contact configuration.

Ambient operating temperature: $-55^{\circ}$ to $60^{\circ} \mathrm{C}\left(-67^{\circ}\right.$ to $140^{\circ} \mathrm{F}$ ).

Note: 1. Pay special attention to the polarities when using the DC type.
2. The release time is somewhat longer, but satisfies the standard specifications of 25 ms .
3. The reverse-breakdown voltage of the diode is 1,000 VDC.
4. Available on DC versions only.

## Connecting sockets

Use the standard MY4 (4PDT) sockets with the terminal arrangements listed below.

Note: 1. R is a resistor for ampere-turn compensation, and is incorporated in the relays rated at 50 VAC or above.
2. Pay attention to the polarity of the set and reset coils, as incorrect connection of positive and negative terminals will result in malfunctioning of the relay.

## HINTS ON CORRECT USE

When using the relay rated at 120 VAC at a supply voltage of 240 VAC, be sure to connect external resistors Rs and Rr to the relay.
