# General Purpose Relay

- Ideally suited for high-inrush fluid pump controls: pool/spa, water processing, emergency, chemical industry, etc.
- High-capacity, high-withstand voltage relay with no contact chattering for momentary voltage drops up to 50% of rated voltage.
- UL Class B construction standard.
- Wide-range AC-activated coil that handles 100 to 120 VAC at either 50 or 60 Hz.
- Miniature hinge for maximum switching capacity, particularly for inductive loads.
- Flame resistant materials (UL94V-0-qualifying) used for all insulation material.
- Quick-connect, screw, and PCB terminals available.
- Standard models are UL, CSA, and TUV approved; VDE/IEC 950 versions are now available. Meet pollution degree 3, Material Group II & III.

# **Ordering Information**

To Order: Select the part number and add the desired coil voltage rating (e.g., G7L-1A-T-CB-AC100/120).

### DC

| Rated voltage | Rated current | Resistance | Must operate | Must release | Max. voltage | Power         |
|---------------|---------------|------------|--------------|--------------|--------------|---------------|
| (V)           | (mA)          | (Ω)        |              | consumption  |              |               |
| 6             | 317           | 18.90      | 75% max.     | 15% min.     | 110% max.    | Approx.1.90 W |
| 12            | 158           | 75         |              |              |              |               |
| 24            | 79            | 303        |              |              |              |               |
| 48            | 40            | 1,220      |              |              |              |               |
| 100           | 19            | 5,260      |              |              |              |               |

Note: 1. The rated current and coil resistance are measured at a coil temperature of  $23^{\circ}$ C ( $73^{\circ}$ F) with tolerances of +15%/-20% for AC rated current and ±15% for DC coil resistance.

2. Performance characteristic data are measured at a coil temperature of 23°C (73°F).

# ■ Characteristics

| Contact resistance        |                           | 50 m $\Omega$ max.  |
|---------------------------|---------------------------|---|
| Operate time              |                           | 30 ms max.  |
| Release time              |                           | 30 ms max.  |
| Max. operating Mechanical |                           | 1,800 operations/hour   |
| frequency                 | Electrical                | 1,800 operations/hour (under rated load)  |
| Insulation resistance     | ce                        | 1,000 MΩ min. (at 500 VDC)  |
| Dielectric strength       |                           | 4,000 VAC, min./5,000 VAC typical, 50/60 Hz for 1 minute between coil and contacts      |
|                           |                           | 2,000 VAC, 50/60 Hz for 1 minute between contacts of same pole                          |
|                           |                           | 2,000 VAC, 50/60 Hz for 1 minute between contacts of different poles (DPST-NO type)     |
| Impulse withstand         | voltage                   | Between coil and contact: 10,000 V min./12,000 V typ. (impulse wave used: 1.20 x 50 µs) |
| Vibration                 | Mechanical<br>durability  | 10 to 55 Hz; 1.50 mm (0.06 in) double amplitude   |
|                           | Malfunction<br>durability | 10 to 55 Hz; 1.50 mm (0.06 in) double amplitude   |
| Shock                     | Mechanical<br>durability  | 1,000 m/s² (approx. 100 G)  |
|                           | Malfunction durability    | 1,000 m/s² (approx.10 G)  |
| Life expectancy           | Mechanical                | 1,000,000 operations min. (at 1,800 operations/hour)                                    |
|                           | Electrical                | 100,000 operations min. (at 1,800 operations/hour under rated load 250,000 ops typical) |
| Ambient temperature       |                           | -20° to 60°C (-4° to 140°F)   |
| Humidity                  |                           | 35% to 85% RH   |
| Weight                    |                           | Quick-connect terminal type: approx. 90 g (3.17 oz)                                     |
|                           |                           | PCB terminal type: approx. 100 g (3.52 oz)  |
|                           |                           | Screw terminal type: approx. 120 g (4.23 oz)  |

#### VDE recognized type (Licence no. 1530 UG)

Note: 1. Please consult OMRON for details of VDE approvals.

| 2. | The G7L relay conforms to the following standards: Electrical safety: | DIN IEC 255 Teil 1-00/DIN VDE 0435 Teil 201/05. 83 |
|----|---|--|
|    |   | DIN VDE 0435 Teil 201 A1/05. 90                    |
|    |   | DIN IEC 255 Teil 0-20/DIN VDE 0435 Teil 120/10. 81 |

EMC:

3. The rated values approved by each of the safety standards (e.g., UL and CSA) may be different from the performance characteristics individually defined in this catalog.

DIN EN 60 950/VDE 0805/11. 93

prEN 50082-2, EN 55022

- 4. In the interest of product improvement, specifications are subject to change.
- 5. Suffix T130 rated at  $130^{\circ}$  C
- 6. Pollution degree 3, Material Group II & III.

# ■ Handling

- To preserve initial performance, do not drop or otherwise subject the power relay to shock.
- The case is not designed to be removed during normal handling and operation. Doing so may affect performance.
- Use the power relay in a dry environment free from excessive dust,  $SO_2$ ,  $H_2S$ , or organic gas.
- Do not allow a voltage greater than the maximum allowable coil voltage to be applied continuously.
- Do not use the power relay outside of specified voltages and currents.
- Do not allow the ambient operating temperature to exceed the specified limit.

### ■ Installation

- Although there are not specific limits on the installation site, it should be as dry and dust-free as possible.
- PCB terminal-equipped relays weigh approximately 100 g. Be sure that the PCB is strong enough to support them. We recommend dual-side through-hole PCBs to reduce solder cracking from heat stress.
- Quick-connect terminals can be connected to fast on receptacle #250 and positive-lock connectors.
- Allow suitable slack on leads when wiring, and do not subject the terminals to excessive force.

# ■ Cleaning PCB Terminals

 PCB terminals have semi-sealed construction which prevents flux from entering the relay base. It is recommended that the user should apply a tape seal over the vent hole prior to wave soldering or cleaning. The tape should then be removed after processing.

# Applications

- Compressors for package air conditioners and heater switching controllers
- · Switching controllers for power tools or motors
- Power controllers for water heaters
- Power controllers for dryers
- Lamp control, motor drivers, and power supply switching in copy machines, facsimiles, and other OA equipment
- Lighting controllers
- · Power controllers for packers or food processing equipment
- Magnetron control in microwaves

# ■ Operating Coil

• As a rule, either a battery or a DC power supply with a maximum 5% ripple is used for the operating voltage for DC relays. Before using a rectified AC supply, confirm that the ripple is not greater than 5%. Ripple greater than this can lead to variations in the operating and reset voltages.

As excessive ripple can generate beats, the insertion of a smoothing capacitor is recommended as shown below.

- When driving a transistor, check the leakage current and connect a bleeder resistor if necessary.
- Momentary voltage drops on coil input voltage should not exceed one second duration after contact mating with no shock or vibration.
