

OMRON

ACCURAX G5 SERVO SYSTEM

Extreme mechatronics meets  -Stream Automation

accurax 

- » Sub micron precision and ms settling time
- » EtherCAT and safety built-in
- » Double registration and full closed loop

realizing

Extreme mechatronics...

At the heart of every great machine

Great machines are born from a perfect match between control and mechanics. Accurax G5 gives you the extra edge to build more accurate, faster, smaller and safer machines. You will benefit from an almost 25% reduction in motor weight, and gain 50% cabinet space. You will achieve sub micron precision and ms settling time. Some might call it perfection, we just call it tireless innovation to help you build great machines.

EtherCAT connectivity

- Compliant with CoE-CiA402 Drive Profile-
- Cyclic synchronous Position, Velocity and Torque modes
- Embedded Gear Ratio, Homing and Profile Position mode
- Distributed clock to ensure high precision synchronisation

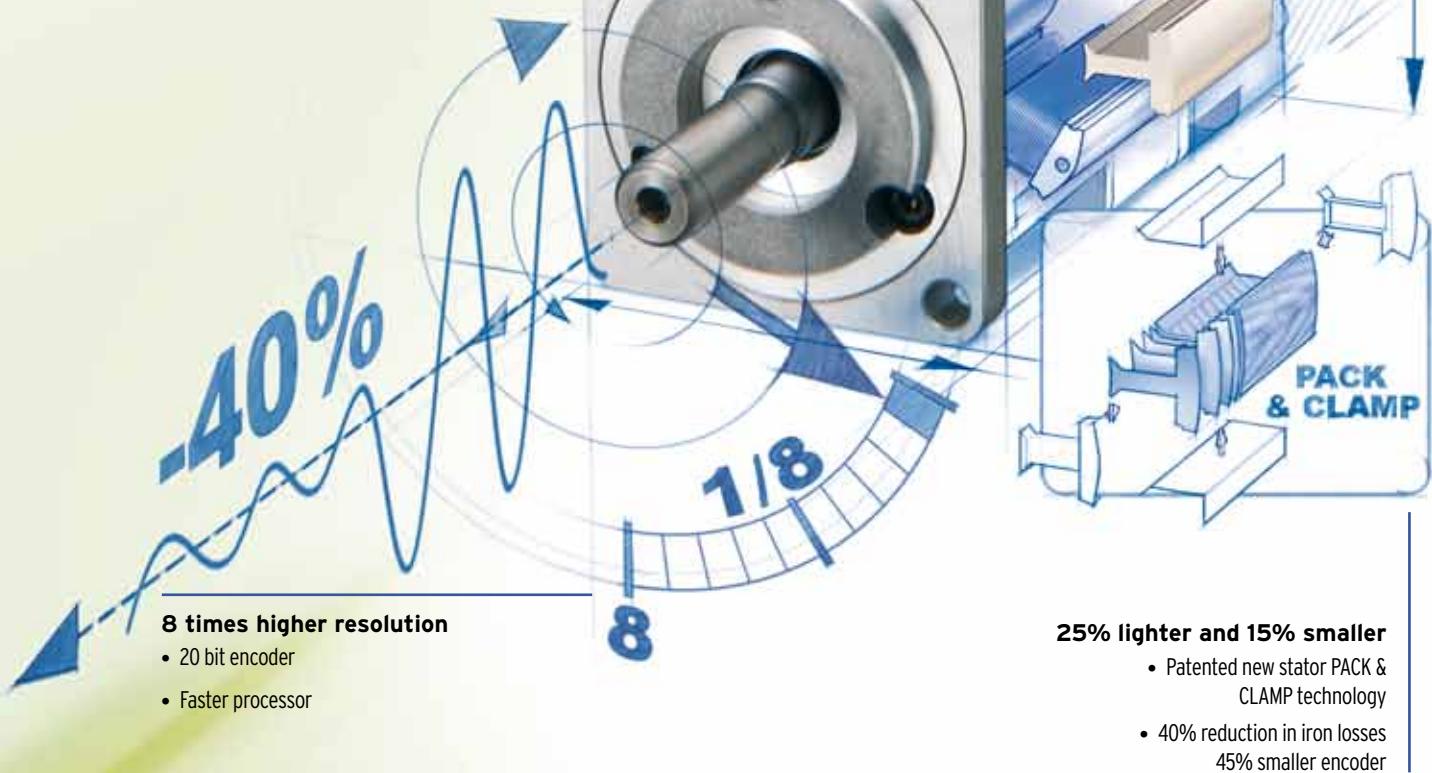

Rugged and smart design

- IP67 motor and connectors
- No flying leads
- 5G vibration resistance

40% reduction in motor cogging

- Use of 10 pole motors
- Improved technology to minimize the encoder non-linear errors

Up to 50% cabinet size reduction

- Up to 40% smaller drive
- Extra 10% saving thanks to side by side mounting

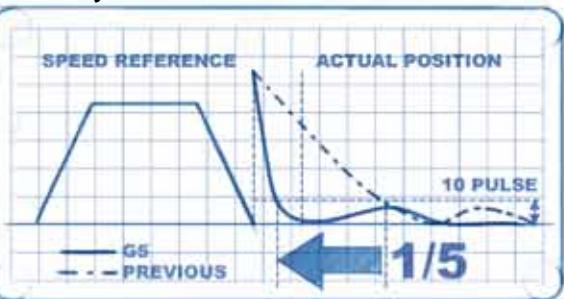

Safety conformance

- PL-d according ISO13849-1:2008
- STO: IEC61800-5-2:2007
- SIL2 according to EN61508:2001
- Cat.3: EN954-1:1996

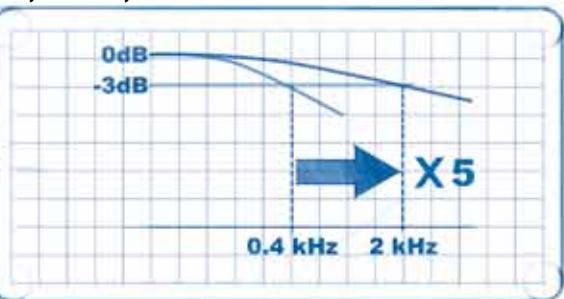

Fast & accurate

- 5 times faster settling time -0~2 ms
- 2 kHz speed response
- Torque feed forward reduces following error

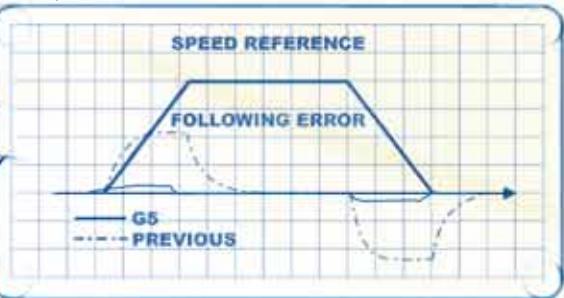

Settling time

Speed response

Torque feed forward

100,000 hr operation in rugged industrial conditions

- No fan below 1 kW
- Long life capacitors

Load vibration suppression

- Up to 4 preset frequencies
- Setting frequency from 1 to 200Hz

Vibration suppression

JUST CREATE

... meets X-Stream Automation

Accurax G5 is perfectly integrated into the new Sysmac automation platform. The servo is fully configured through the one software Sysmac Studio that includes configuration, programming, simulation and monitoring for the complete machine. The built-in EtherCAT connectivity with the distributed clock functionality allows accurate synchronisation between all servos with less than 1µ jitter. Accurax G5 also simplifies your mechanical and electrical design by including double registration input, full closed loop and multi-drive safety functionality.

① Built-in safety: multi-drives in a single safety relay circuit

The two safety inputs and the external device monitoring (EDM) output can be linked from one servo drive to another without using additional safety relays.

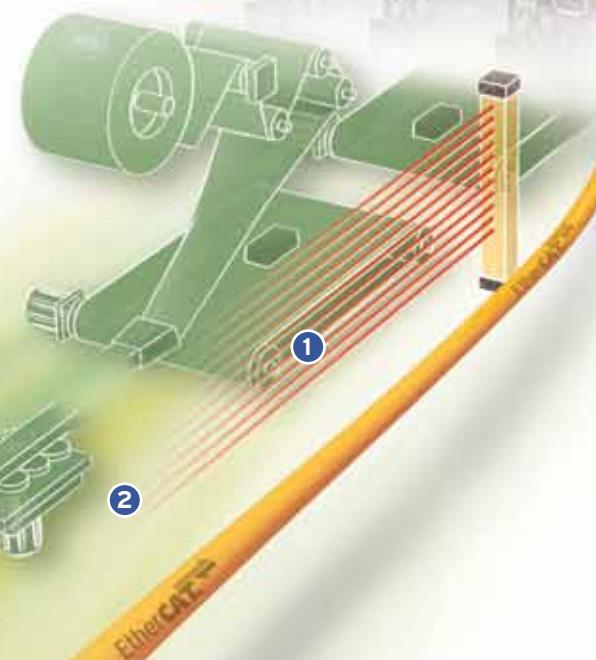

② Full closed loop

Accurax G5 has a built-in external encoder input for full closed loop operation, for when additional accuracy is required. The external encoder input eliminates the errors caused by, for example, slip in the material.

③ Double registration input

Accurax G5 increases application versatility by providing 2 independent registration inputs per axis, especially relevant for applications such as flow wrappers. By registering the product input position and the mark position on the film, the system can make relative corrections ensuring high accuracy with a simple mechanical design.

ONE
MACHINE NETWORK

NJ-Series machine controller

- Seamless integration of Logic and Motion
- Up to 64 axis motion control
- EtherNet/IP and EtherCAT ports embedded
- Electronic cams and gearboxes

Accurax G5 servo system

Accurate motion control in a compact size servo drive family. EtherCAT and safety built-in.

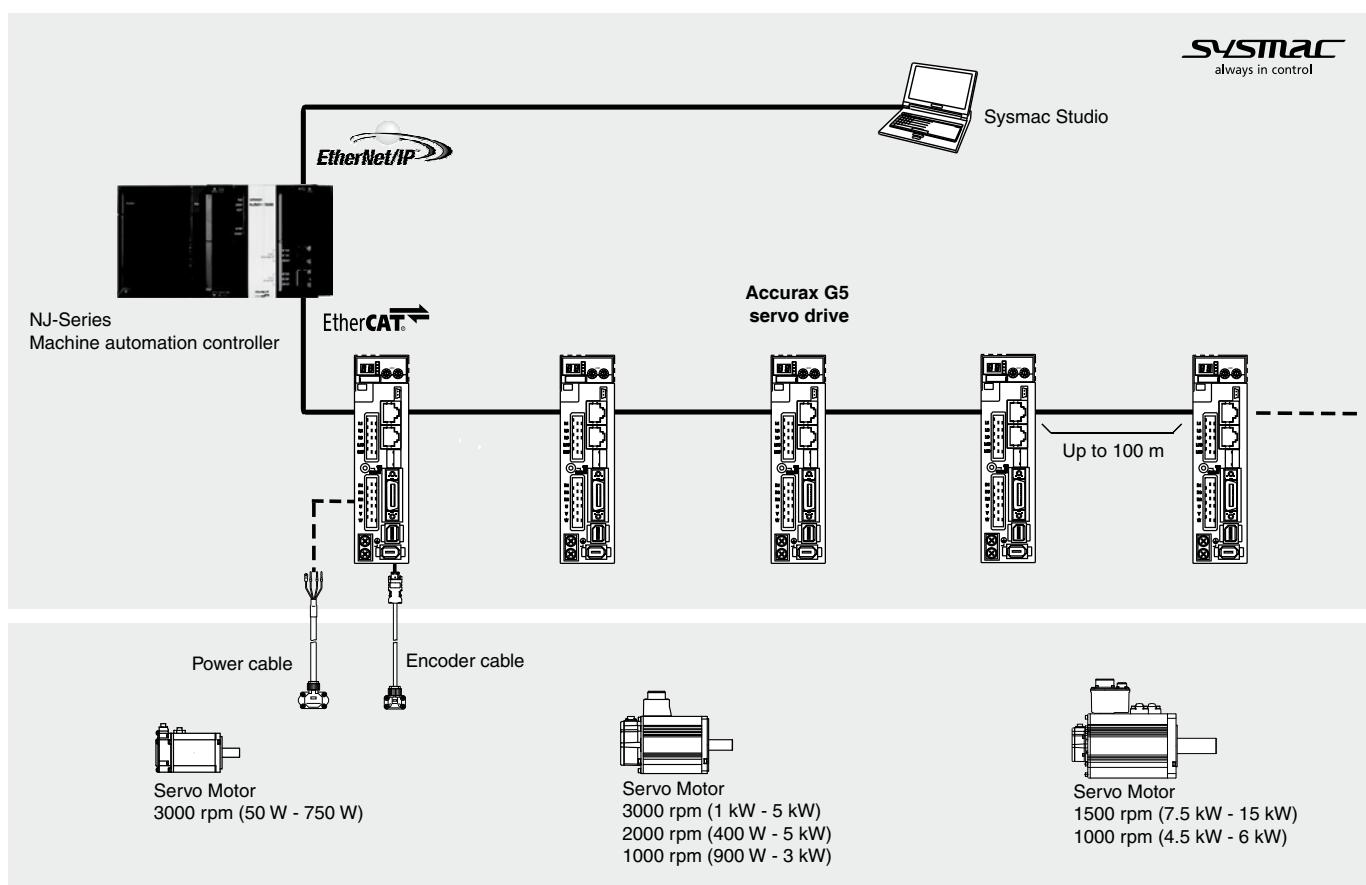

- EtherCAT, ML-II and Analog/ Pulse servo drive models
- Safety conforming ISO13849-1 PL-d
- High-response frequency of 2 kHz
- High resolution provided by 20 bits encoder
- Drive Programming: embedded indexer functionality in the Analogue/ Pulse models
- External encoder input for full closed loop
- Real time auto-tuning
- Advanced tuning algorithms (Anti-vibration function, torque feedforward, disturbance observer)
- IP67 protection in all motor models

Ratings

- 230 VAC single-phase 50 W to 1.5 kW (8.59 Nm)
- 400 VAC three-phase 400 W to 15 kW (95.5 Nm)

General specifications (for EtherCAT servo drives)

Performance	Frequency characteristics	2 kHz
EtherCAT interface	Command input	EtherCAT commands (for sequence, motion, data setting/reference, monitor, adjustment, and other commands).
*1 EtherCAT	Drive Profile	CSP, CSV, CST, Homing and Position Profile modes (CiA402 Drive Profile) Homing mode Position profile mode Dual touch probe function (Latch function) Torque limit function
I/O signal	Sequence input signal	- Multi-function input x 8 by parameter setting (forward/reverse drive prohibition, emergency stop, external latch, origin proximity, forward/reverse torque limit, general purpose monitor input).
	Sequence output signal	1 x servo drive error output 2 x multi-function outputs by parameters setting (servo ready, brake release, torque limit detection, zero speed detection, warning output, position completion, error clear attributed, programmable output...)
USB communications	Interface	Personal computer/ Connector mini-USB
	Communications standard	Compliant with USB 2.0 standard
	Function	Parameter setting, status monitoring and tuning
EtherCAT communications	Communications protocol	IEC 61158 Type 12, IEC 61800-7
	Physical layer	100BASE-TX (IEEE802.3)
	Connectors	RJ45 x 2 ECAT IN: EtherCAT input x 1 ECAT OUT: EtherCAT output x 1
	Communications media	Category 5 or higher(cable with double, aluminium tape and braided shielding is recommended)
	Communications distance	Distance between nodes: 100 m max.
	LED indicators	RUN x 1 ERR x 1 L/A IN (Link/Activity IN) x 1 L/A OUT (Link/activity OUT) x 1
Integrated functions	Autotuning	Automatic motor parameter setting. One parameter rigidity setting. Inertia detection.
	Dynamic brake (DB)	Built-in. Operates during main power OFF, servo alarm, servo OFF or overtravel.
	Regenerative processing	Internal resistor included in models from 600 W to 5 kW. Regenerative resistor externally mounted (option).
	Overtravel (OT) prevention function	DB stop, deceleration stop or coast to stop during P-OT, N-OT operation
	Encoder divider function	Gear ratio
	Protective functions	Overcurrent, overvoltage, undervoltage, overspeed, overload, encoder error, overheat...
	Analog monitor functions for supervision	Analog monitor of motor speed, speed reference, torque reference, command following error, analog input... The monitoring signals to output and their scaling can be specified with parameters. Number of channels: 2 (Output voltage: ±10V DC)
Panel operator	Display functions	2 x digit 7-segment LED display shows the drive status, alarm codes, parameters...
	Switches	2 x rotary switches for setting the node address
CHARGE lamp		Lits when the main circuit power supply is turned ON.
Safety terminal	Functions	Safety Torque OFF function to cut off the motor current and stop the motor. Output signal for failure monitoring function.
	Conformed standards	EN ISO13849-1:2008 (PL- d, Performance Level d), IEC61800-5 -2:2007 (function STO, Safe Torque OFF), EN61508:2001 (Safety Integrity Level 2, SIL2), EN954-1:1996 (CAT3).
External encoder feedback		Serial signal and line-driver A-B-Z encoder for full-closed control

*1 The CSV, CST and Homing modes are supported in the servo drive with version 2.0 or higher. The Position profile mode is supported in the servo drive version 2.1 or higher.

General specifications (for MECHATROLINK-II servo drives)

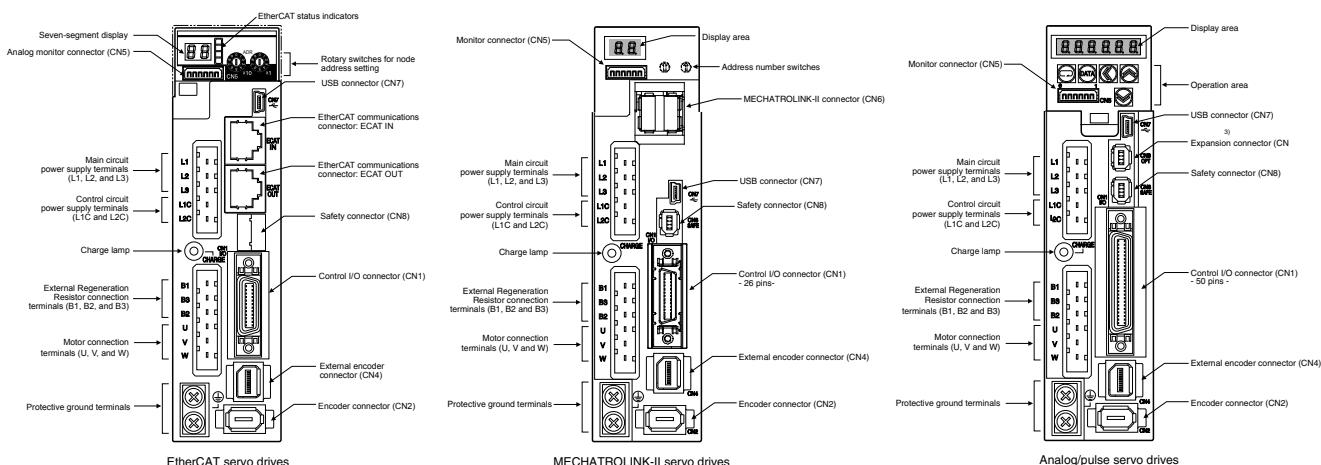

Control mode		Position control, velocity control, torque control, full-closed control.
Performance	Frequency characteristics	2 kHz
	Speed zero clamp	Preset velocity command can be clamped to zero by the speed zero clamp input.
	soft start time setting	0 to 10 s (acceleration, deceleration can be set separately).
Command input	MECHATROLINK-II communication	MECHATROLINK-II commands (for sequence, motion, data setting/reference, monitor, adjustment and other commands)
I/O signal	Sequence input signal	- Multi-function input x 8 by parameter setting (forward/reverse drive prohibition, emergency stop, external latch, origin proximity, forward/reverse torque limit, general purpose monitor input).
	Sequence output signal	It is possible to output three types of signal form incl.: brake release, servo ready, servo alarm, positioning complete, motor rotation speed detection, torque limit detection, zero speed detection, speed coincidence detection, warning, position command status, speed limit detection, alarm output, speed command status.
Integrated functions	USB communications	Interface Personal computer/ Connector mini-USB Communications standard Compliant with USB 2.0 standard Function Parameter setting, status monitoring and tuning
	MECHATROLINK-II communications	Communications protocol MECHATROLINK-II Station address 41H to 51 FH (max. number of slaves: 30) Transmission speed 10 Mbps Transmission cycle 1, 2 & 4 ms Data length 32 bytes
	Autotuning	Automatic motor parameter setting. One parameter rigidity setting. Inertia detection.
	Dynamic brake (DB)	Built-in. Operates during main power OFF, servo alarm, servo OFF or overtravel.
	Regenerative processing	Internal resistor included in models from 600 W to 5 kW. Regenerative resistor externally mounted (option).
	Overtravel (OT) prevention function	DB stop, deceleration stop or coast to stop during P-OT, N-OT operation
	Encoder divider function	Optional division possible
	Protective functions	Overcurrent, overvoltage, undervoltage, overspeed, overload, encoder error, overheat...
	Analog monitor functions for supervision	Analog monitor of motor speed, speed reference, torque reference, command following error, analog input... The monitoring signals to output and their scaling can be specified with parameters. Number of channels: 2 (Output voltage: ±10V DC)
	Panel operator	Display functions 2-digit 7-segment LED display shows the drive status, alarm codes, parameters... MECHATROLINK-II communications status LED indicator (COM) Switches 2 x rotary switches for setting the MECHATROLINK-II node address
	CHARGE lamp	Lits when the main circuit power supply is turned ON.
	Safety terminal	Functions Safety Torque OFF function to cut off the motor current and stop the motor. Output signal for failure monitoring function. Conformed standards EN ISO13849-1:2008 (PL- d, Performance Level d), IEC61800-5 -2:2007 (function STO, Safe Torque OFF), EN61508:2001 (Safety Integrity Level 2, SIL2), EN954-1:1996 (CAT3).
	External encoder feedback	Serial signal and line-driver A-B-Z encoder for full-closed control

General specifications (for analog/pulse servo drives)

Control modes		External control (1) position control, (2) velocity control, (3) torque control, (4) position/velocity control, (5) position/torque control, (6) velocity/torque control and (7) full-closed control.
		Internal positioning Drive Programming: indexer functionality enabled by parameter.
Speed/torque control	Performance	Frequency characteristics 2 kHz
		Speed zero clamp Preset velocity command can be clamped to zero by the speed zero clamp input.
		Soft start time setting 0 to 10 s (acceleration, deceleration can be set separately). S-curve acceleration/deceleration is also available.
Position control	Input signal	Speed control Speed reference voltage 6 VDC at rated speed: set at delivery (the scale and polarity can be set by parameters) Torque limit 3 VDC at rated torque (torque can be limited separately in positive/negative direction). Preset speed control Preset speed is selectable from 8 internal settings by digital inputs.
		Torque control Torque reference voltage 3 VDC at rated torque: set at delivery (the scale and polarity can be set by parameters). Speed limit Speed limit can be set by parameter.
		Command pulse Input pulse type Sign + pulse train, 90° phase displacement 2-phase pulse (A-phase+ B-phase) or CCW/CW pulse train Input pulse frequency 4 Mpps max. (200 Kpps max. at open collector). Command pulse scaling (Electronic Gear) Applicable scaling ratio: 1/1000 - 1000 Any value of 1-2 ³⁰ can be set for numerator (encoder resolution) and denominator (command pulse resolution per motor revolution). The combination has to be within the range shown above.
Full-closed control	Input signal	Command pulse Input pulse type Sign + pulse train, 90° phase displacement 2-phase pulse (A-phase+ B-phase) or CCW/CW pulse train Input pulse frequency 4 Mpps max. (200 Kpps max. at open collector). Command pulse scaling (Electronic Gear) Applicable scaling ratio: 1/1000 - 1000 Any value of 1-2 ³⁰ can be set for numerator (encoder resolution) and denominator (command pulse resolution). The combination has to be within the range shown above.
		External encoder scaling Applicable scaling ratio: 1/20 - 160 Any value of 1-2 ³⁰ can be set for numerator (encoder resolution) and denominator (external encoder resolution per motor revolution). The combination has to be within the range shown above.
		Functionality selection Functionality enabled by parameter.
Drive Programming	Supported functionality	G5 Analogue/ Pulse servo drive with firmware 1.10 or higher.
	Software	CX-Drive version 2.30 or higher.
	Communication	The program can be downloaded via USB communication (CX-Drive)
	Command types	Move relative, Move absolute, Jog, Homing, Deceleration stop, Velocity update, Timer, Output signal control, Jump, Conditional branching.
	Number of commands	Up to 32 commands (0 to 31)
	Command execution	Strobe input to execute the selected command or to execute a complex sequence (combination of various commands).
	Command selection	Up to 5 digital inputs to select the individual commands or sequences

Position signal output		A-phase, B.phase, Z-phase line driver output and Z-phase open-collector output.						
I/O signal	External control signal	<ul style="list-style-type: none"> - Multi-function input x 10 by parameter setting: servo ON, control mode switching, forward/reverse drive prohibition, vibration filter switching, gain switching, electronic gear switching, error counter reset, pulse prohibition, alarm reset, internal speed selection, torque limit switching, zero speed, emergency stop, inertia ratio switching, velocity/torque command sign. - Dedicated input x 1 (SEN: sensor ON, ABS data request). 						
	Internal positioning (Drive programming mode)	<ul style="list-style-type: none"> - Multi-function input x 10 by parameter setting: servo ON, forward/reverse drive prohibition, damping filter switching, gain switching, alarm reset, torque limit switching, emergency stop, immediate stop, deceleration stop input, inertia ratio switching, latch input, origin proximity input, strobe and 5 x input command selection. - Dedicated input x 1 (SEN: sensor ON, ABS data request). 						
Sequence output signal	External control	<ul style="list-style-type: none"> - 3 x outputs signals configured by parameter settings: brake release, servo ready, servo alarm, positioning complete, motor rotation speed detection, torque limit detection, zero speed detection, speed coincidence detection, warning, position command status, speed limit detection, speed command status. - 1 output fixed to Alarm output. 						
	Internal positioning (Drive programming enabled)	<ul style="list-style-type: none"> 3 x outputs signals configured by parameter settings: ready, Brake, position completed, motor speed detection, torque limit status, zero speed detection, speed conformity, warning, position command status, position completed, drive programming command output and output during drive programming. - 1 output fixed to Alarm output.

Installation

Single-phase, 230 VAC (for EtherCAT and MECHATROLINK-II servo drives)

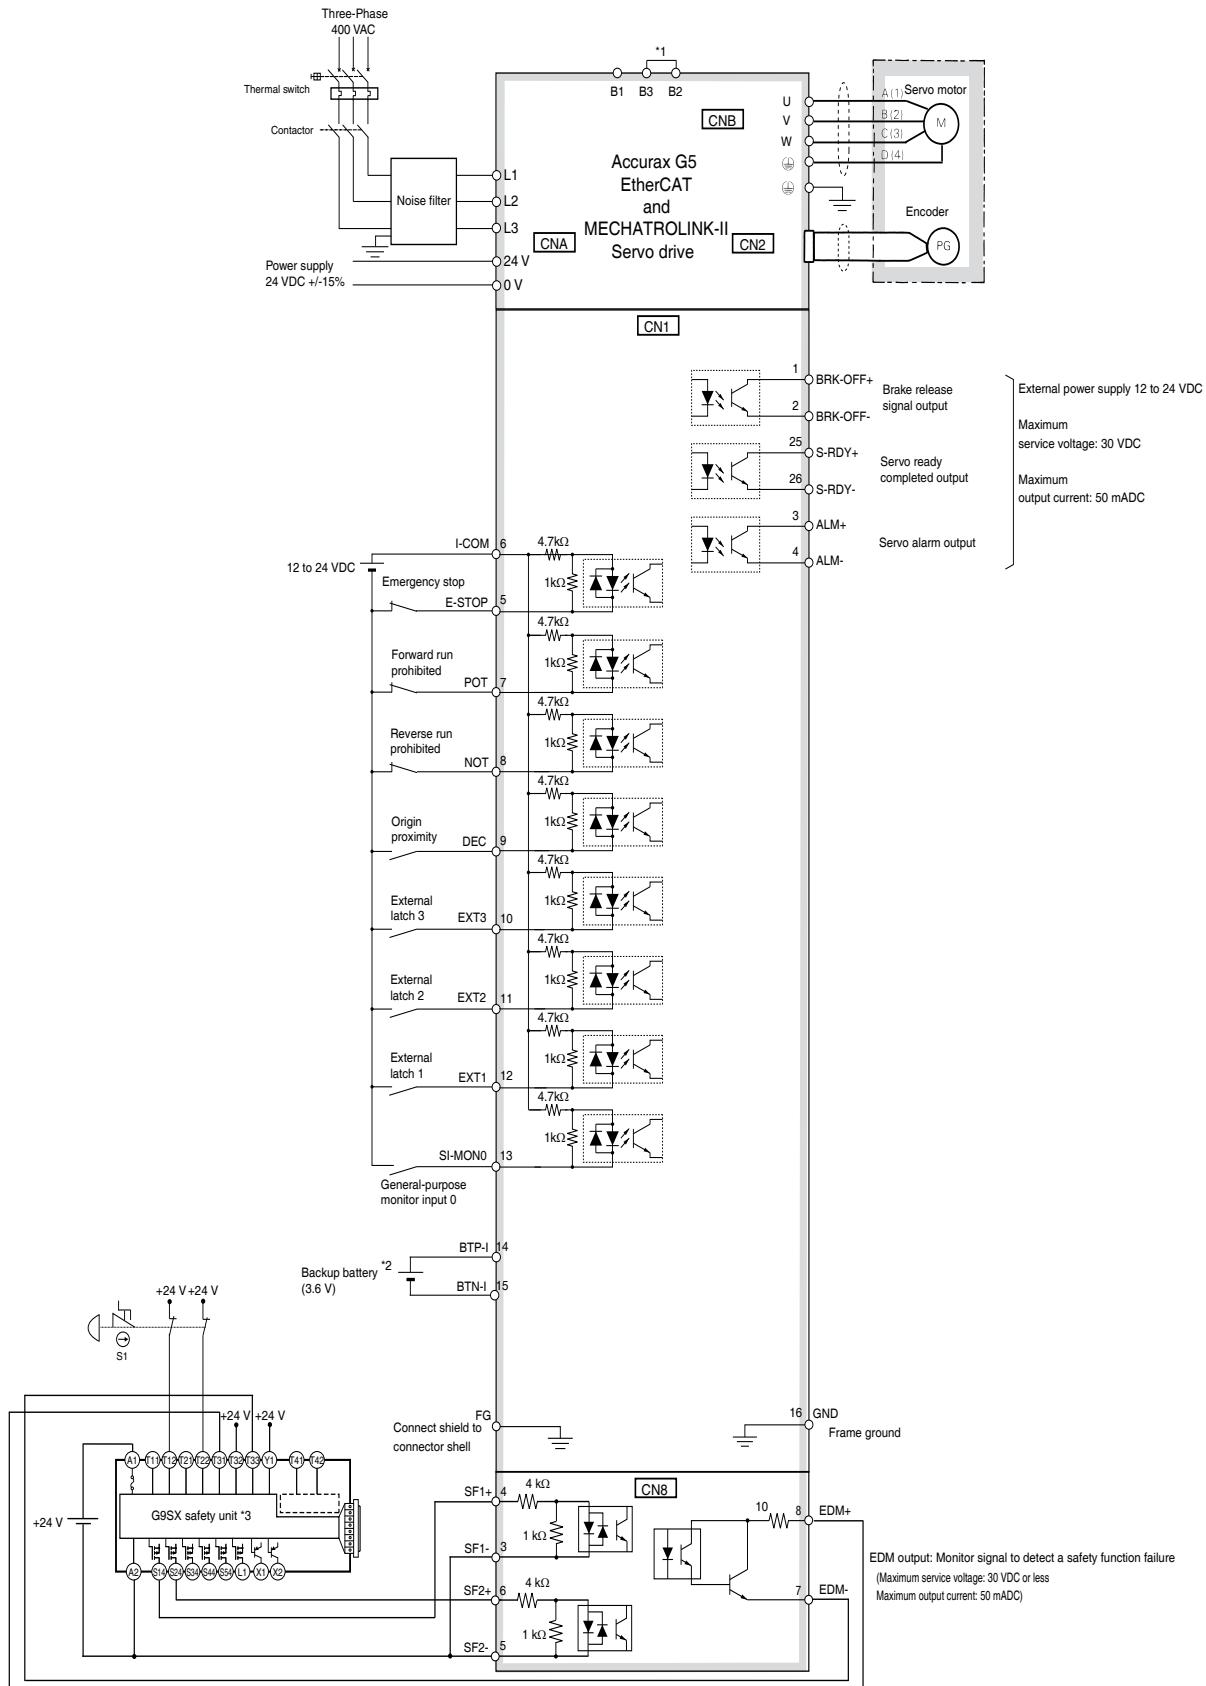

*1 For servo drives from 750 W, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B1 and B2 and connect an external regenerative resistor between B1 and B2.

*2 For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

*3 Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Note: The input function of pins 5 and 7 to 13, and output function of pins 1, 2, 25 and 26, can be changed via parameter settings.

Three-phase, 400 VAC (for EtherCAT and MECHATROLINK-II servo drives)

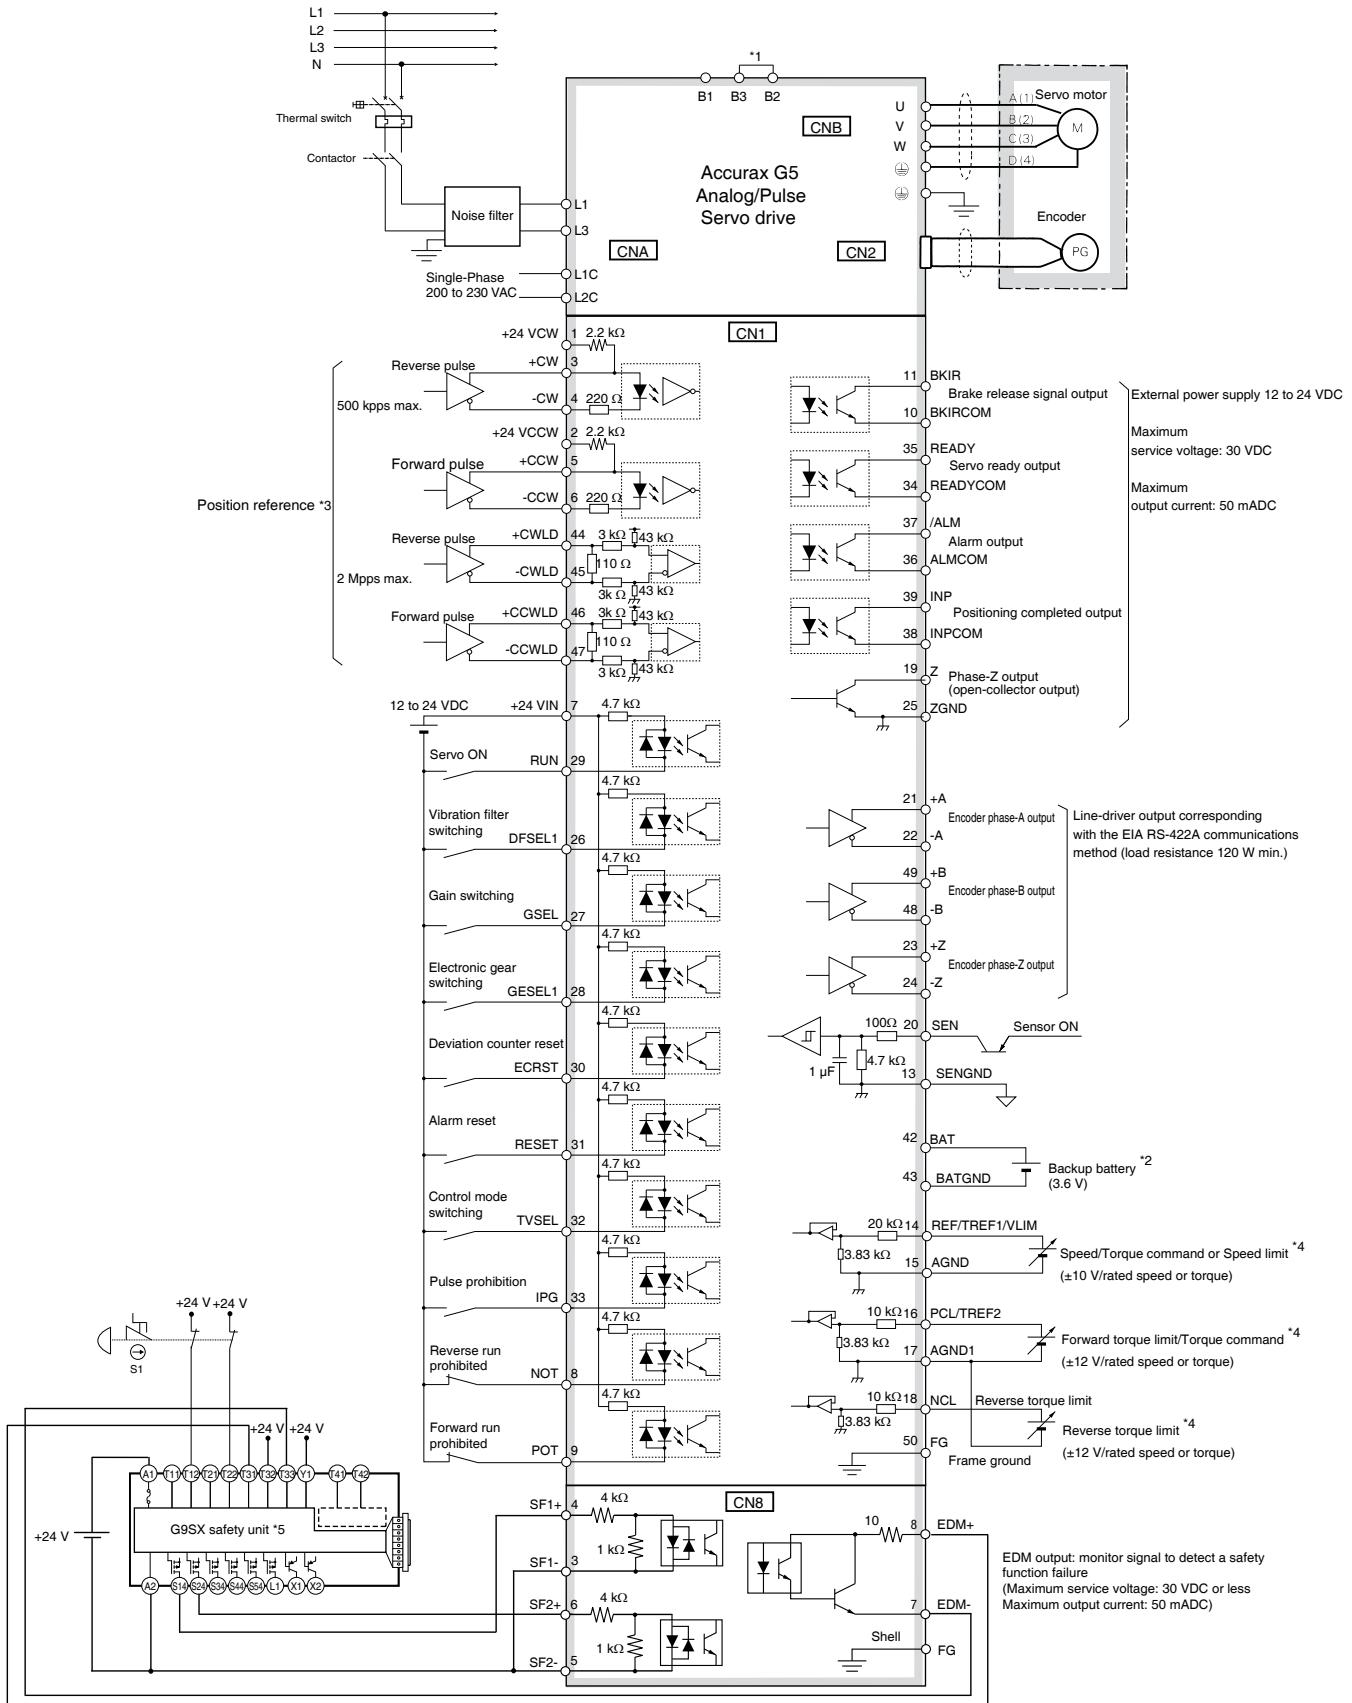

*1 For servo drives from 600W to 5 kW, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

*2 For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

*3 Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Note: The input function of pins 5 and 7 to 13, and output function of pins 1, 2, 25 and 26, can be changed via parameter settings.

Single-phase, 230 VAC(for analog/pulse servo drives)

*1 For servo drives from 750 W, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B1 and B2 and connect an external regenerative resistor between B1 and B2.

*2 For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

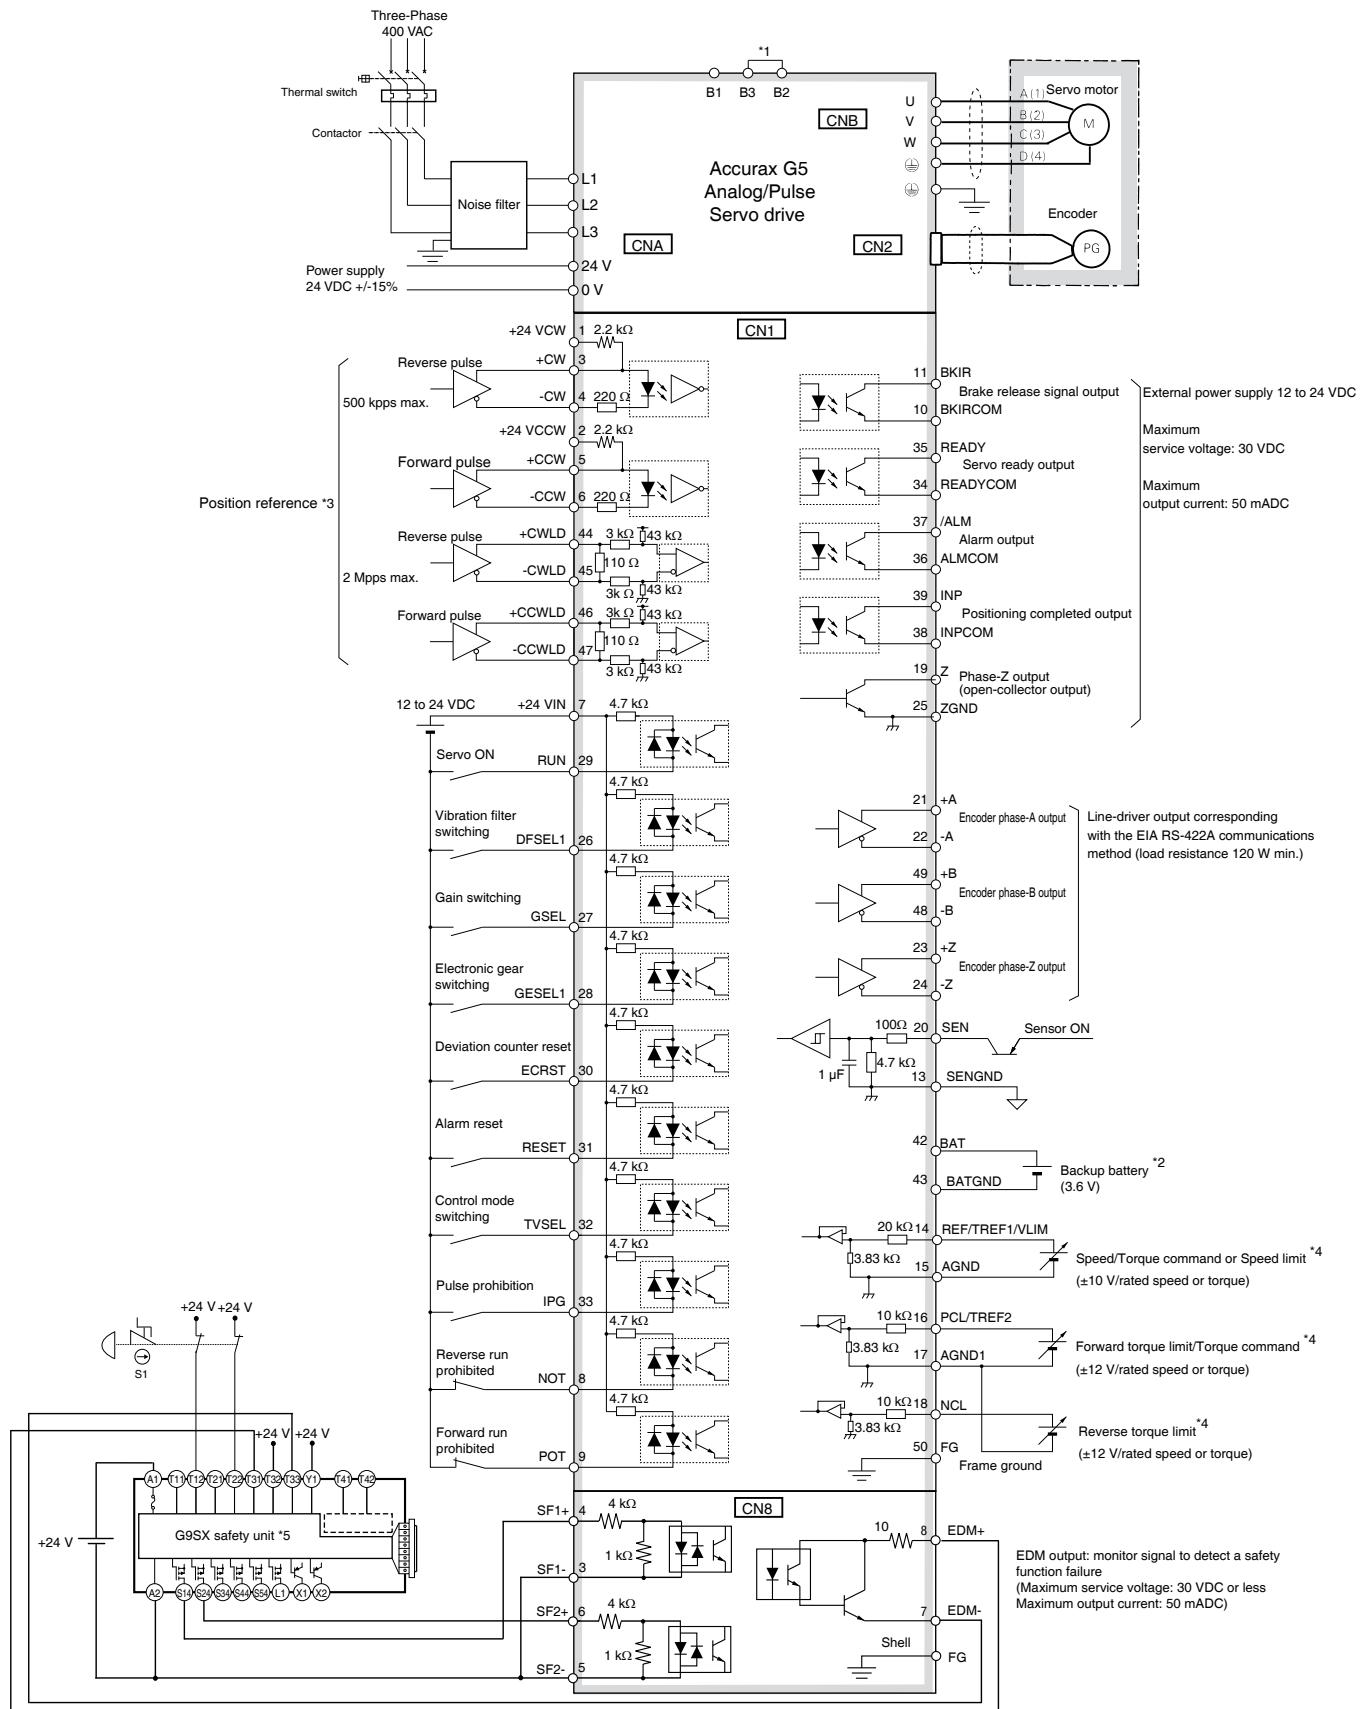

*3 Only available in Position control mode.

*4 The input function depends on control mode used (Position, speed or torque control).

*5 Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Note: The input function of pins 8,9 and 26 to 33, and output function of pins 10, 11, 34, 35, 38 and 39, can be changed via parameter settings.

Three-phase, 400 VAC (for analog/pulse servo drives)

*1 For servo drives from 600W to 5 kW, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

*2 For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

*3 Only available in Position control mode.

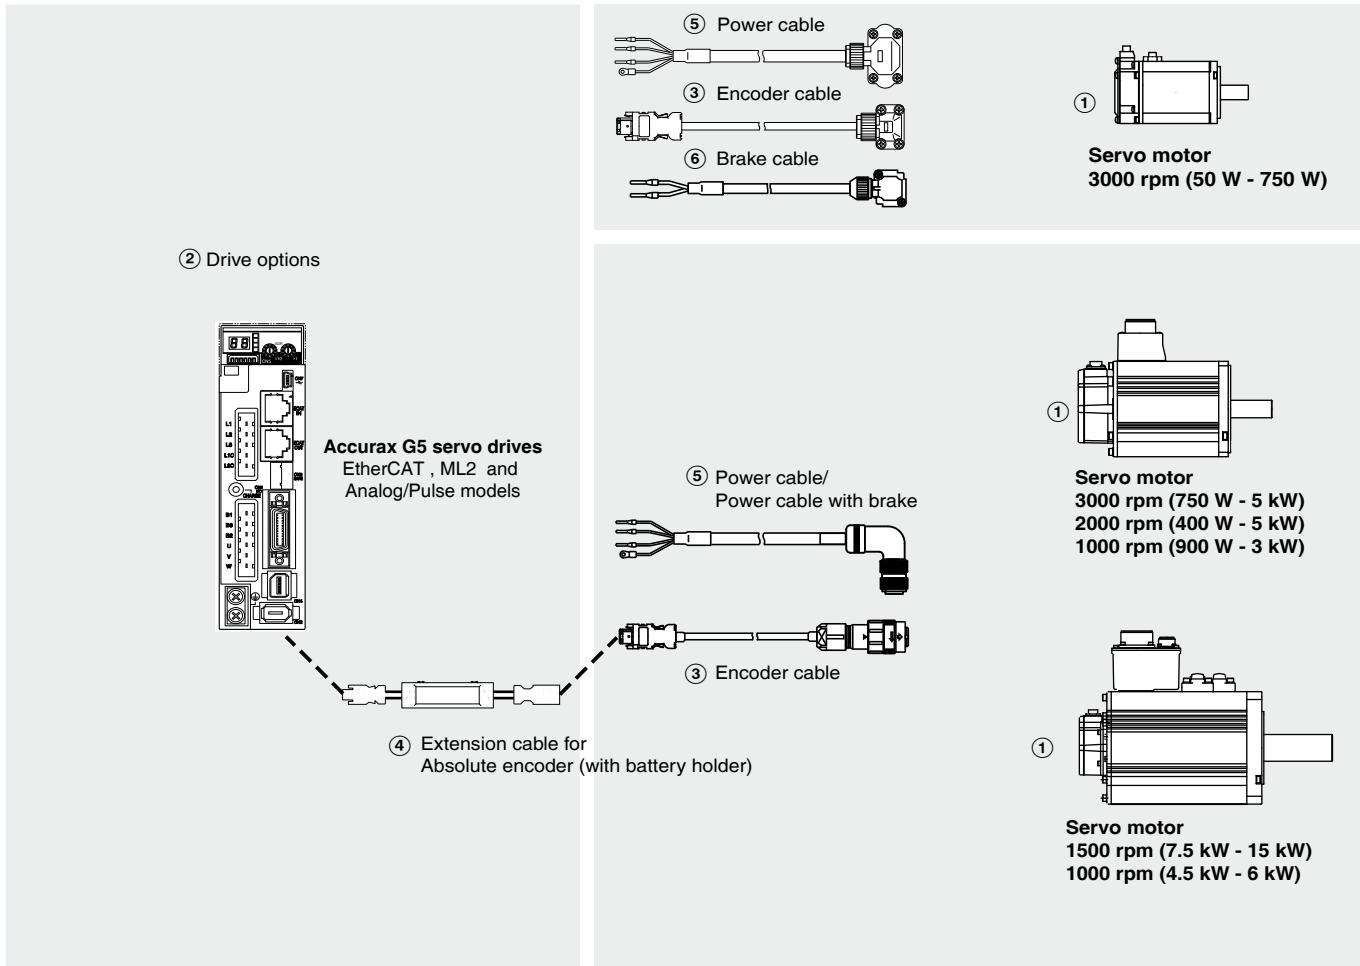

*4 The input function depends on control mode used (Position, speed or torque control).

*5 Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Note: The input function of pins 8,9 and 26 to 33, and output function of pins 10, 11, 34, 35, 38 and 39, can be changed via parameter settings.

Ordering information

Accurax G5 servo motor reference configuration

Note: The symbols ①②③... show the recommended sequence to select the servo motor and cables

Servo motor

- ① Select motor from R88M-K family using motor tables in next pages.

Servo drive

- ② Refer to Accurax G5 servo drive section for detailed drive specifications and selection of drive accessories.

More Omron representatives
www.industrial.omron.eu

Automation Systems

- Programmable logic controllers (PLC)
- Human machine interfaces (HMI)
- Remote I/O
- Industrial PC's
- Software

Motion & Drives

- Motion controllers
- Servo systems
- Inverters
- Robots

Control Components

- Temperature controllers
- Power supplies
- Timers
- Counters
- Programmable relays
- Digital panel indicators
- Electromechanical relays
- Monitoring products
- Solid-state relays
- Limit switches
- Pushbutton switches
- Low voltage switch gear

Sensing & Safety

- Photoelectric sensors
- Inductive sensors
- Capacitive & pressure sensors
- Cable connectors
- Displacement & width-measuring sensors
- Vision systems
- Safety networks
- Safety sensors
- Safety units/relay units
- Safety door/guard lock switches

X-ON Electronics

Largest Supplier of Electrical and Electronic Components
