II servo drive specifications

Load variance	During 0 to 100% load ± 0.01 max. (at rated speed)
Voltage variance	0% at $\pm 10\%$ of rated voltage (at rated speed)
Temperature variance	0 to 50°C $\pm 0.1\%$ max. (at rated speed)
Characteristics	1 kHz
Accuracy (reproducibility)	$\pm 3\%$ (at 20% to 100% of rated torque)
Setting	0 to 10 s (acceleration time and deceleration time can be set)
Commands	MECHATROLINK-II commands (for sequence, motion, data setting/reference, monitor, adjustment and other commands)
Alarm	Emergency stop, 3 external latch signals, forward/reverse torque limit, forward/reverse run prohibit, origin proximity, 3 general-purpose inputs
Signal	It is possible to output three types of signals: positioning completed, speed coincidence, rotation speed detection, servo ready, current limit, speed limit, brake release and warning signal
Interface	Personal computer
Transmission rate	From 2400 to 57600 bps
Functions	Parameter setting, status display, alarm display (monitor, clear, history), servo drive data tracing function, test run/autotuning operations, real time trace, absolute encoder setting, default values function
Communications protocol	MECHATROLINK-II
Transmission rate	10 Mbps
Data length	32 bytes
Functions	Parameter setting, status display, alarm display (monitor, clear, history), default values function
Operating mode	Horizontal and vertical axis mode. One parameter rigidity setting. Load inertia detection.
Operating condition	Operates when main power OFF, servo alarm, overtravel or servo OFF
Regeneration function	Built-in regeneration resistor in models from 750 W to 1.5 kW. External regeneration resistor optionally.
Emergency stop (E-STOP)	Dynamic brake, disables torque or emergency stop torque during POT and NOT operation
Emergency stop input	Emergency stop input
Positioning	Optional division pulses possible
Electronic gearing	$0.01 < \text{Numerator/Denominator} < 100$
Speed function	8 internal speeds
Protection	Overvoltage, undervoltage, overcurrent, overload, regeneration overload, servo drive overheat
Measurement	The actual servomotor speed, command speed, torque and number of accumulated pulses can be measured using an oscilloscope or other device.
Display functions	A 2-digit 7-segment LED display shows the servo drive status, alarm codes, parameters, etc. MECHATROLINK-II communications status LED indicator (COM)
Switches	Rotary switch for setting the MECHATROLINK-II node address

III servo drive specifications

	Position, speed and torque control mode
Load variance	During 0 to 100% load ± 0.01 max. (at rated speed)
Voltage variance	0% at $\pm 10\%$ of rated voltage (at rated speed)
Temperature dependence	0 to 50°C $\pm 0.1\%$ max. (at rated speed)
Characteristics	1 kHz
Accuracy (reproducibility)	$\pm 3\%$ (at 20% to 100% of rated torque)
Setting	0 to 10 s (acceleration time and deceleration time can be set)
Input pulse type	Signal + pulse, 90° phase displacement 2-phase pulse (phase A/B) or reverse and forward pulses (CW/CCW)
Input pulse frequency	500 kpps max. line-driver input, 200 kpps max. open-collector input
Electronic gearing	$0.01 < \text{Numerator/Denominator} < 100$
Speed reference voltage	10 VDC at 3000 r/min: set at delivery (the scale can be set by parameters)
Torque limit	3 VDC at rated torque (torque can be limited separately in positive/negative direction)
Preset speed control	Preset speed is selectable from 8 internal settings by digital inputs.
Torque reference voltage	3 VDC at rated torque: set at delivery (the scale and polarity can be set by parameters).
Speed limit	Speed limit can be set by parameter.
Alarm	Forward/reverse run prohibit, deviation counter reset, alarm reset, control mode switch, pulse prohibited, speed selection, gain switch, zero speed designation, origin proximity
Signal	Brake release, servo ready and alarm output. It is possible also to output two types of configurable signals: current limit, rotation speed detection, warning signal, speed coincidence, positioning completed

Interface	Personal computer
Transmission rate	From 2400 to 57600 bps
Functions	Parameter setting, status display, alarm display (monitor, clear, history), servo drive data tracing function, test run/autotuning operations, real time trace, absolute encoder setting, default values function
Interface	Communication data interface between servo drives and personal computer.
Transmission rate	From 2400 to 57600 bps
Functions	Parameter setting, status display, alarm display (monitor, clear, history), servo drive data tracing function, test run/autotuning operations, real time trace, absolute encoder setting, default values function
	Horizontal and vertical axis mode. One parameter rigidity setting. Load inertia detection.
	Operates when main power OFF, servo alarm, overtravel or servo OFF
	Built-in regeneration resistor in models from 750 W to 1.5 kW. External regeneration resistor optionally.
Function	Dynamic brake, disables torque or emergency stop torque during POT and NOT operation
	Emergency stop input
	Optional division pulses possible
	Overvoltage, undervoltage, overcurrent, overload, regeneration overload, servo drive overheat
	The actual servomotor speed, command speed, torque and number of accumulated pulses can be measured using an oscilloscope or other device.
Display functions	A 6-digit 7-segment LED display shows the servo drive status, alarm codes, parameters, etc.
Switches	Unit No. switch for serial communications. Value from 0 to F. To identify which servo drive the computer is accessing in RS232 communications when multiple servo drives.

CS

MECHATROLINK-II servo drive

Analogue/pulse servo drive

ector (CNA) specifications

Name	Function
Main circuits power supply input	AC power input terminals for the main circuit Note: for single-phase connect the power supply input to L1 and L3
Control circuit power supply input	AC power input terminals for the control circuit

ector (CNB) specifications

Name	Function
External regeneration resistor connection terminals	Up to 400 W: If regenerative energy is high, connect an external regeneration resistor between B1 and B2. From 750 W to 1.5kW: Normally B2 and B3 are connected. If regenerative energy is high, remove the short-circuit bar between B2 and B3 and connect an external regeneration resistor between B1 and B2.
Servo motor connection terminals	Terminals for outputs to the servomotor.
Frame ground	Ground terminal. Ground to 100Ω or less.

Input signals (for MECHATROLINK-II servo drives)

Name	Function
	Control power supply input for sequence signals: users must provide the +24 V power supply. Allowable voltage range: 12 to 24 VDC
Emergency Stop Input	Input for emergency stop. Emergency stop function factory default: enable.
External Latch Signals	This external signal input latches the current value feedback pulse counter. Minimal signal width must be 1 ms.
External general-purpose Input 0	This input is used as external general-purpose input.
External general-purpose Input 1	
External general-purpose Input 2	
Forward Torque Limit Input	This signal input selects the torque limit.
Reverse Torque Limit Input	
Forward Run Prohibit Input	Forward/ reverse drive rotation overtravel input. Stops servomotor when movable part travels beyond the allowable range of motion.
Reverse Run Prohibit Input	
Origin Proximity Input	Connect the origin proximity input signal in the origin search operation.
Battery backup input for absolute encoder	Connecting pin for the absolute backup battery. Do not connect when a battery is connected to the servomotor encoder cable.

Output signals (for MECHATROLINK-II servo drives)

Name	Function
	The output turns OFF when an alarm is generated in the Servo drive.
	General-purpose output.
DM	The function for this output is selected by changing the parameter: INP1 (Positioning completed), VCMP (Speed conformity signal), TGON (Servomotor rotation speed detection), READY (Servo ready), CLIM (Current limit detection), VLIM (Speed limit detection), BKIR (Brake interlock), WARN (Warning signal)
DM	
DM	
DM	

Input signals (for analog/pulse servo drives)

Mode	Signal name	Function
	+24 VCW	Reference pulse input for line driver and open collector according to parameter setting.
	+CW	
	-CW	Input mode:
	+24 VCW	Sign + pulse string
	+CCW	Reverse/forward pulse (CCW/CW pulse)
	-CCW	Two-phase pulse (90° phase differential)
	+CWLD	Reference pulse input for line driver only.
	-CWLD	
	+CCWLD	Input mode:
	-CCWLD	Reverse/forward pulse (CW/CCW pulse)
	REF	Speed reference input: ±10 V/rated motor speed (input gain can be modified using a parameter).

Signal name	Function	
+24 VIN	Control power supply input for sequence signals: users must provide the +24 V power supply (12 to 24 V).	
RUN	Servo ON: this turn ON the servo.	
DFSEL	Vibration filter switching	Enables vibration filter according parameter setting.
PNSEL	Speed command rotation direction switch	
VZERO	Zero speed designation	Speed command is regarded as 0. This function is enable/disabled by parameter.
GSEL	Gain switching	Enables gain value according parameter setting.
TLSEL	Torque limit switch.	
GESEL	Electronic gear switching	Switches the numerator for electronic gear ratio.
VSEL3	Internal speed selection 3	Input to select the desired speed setting during internally speed operation. The speed selector is combining this input with VSEL1 and VSEL2 inputs.
ECRST	Error counter reset input.	Resets the position error counter.
VSEL2	Internal speed selection 2	Input to select the desired speed setting during internally speed operation. The speed selector is combining this input with VSEL1 and VSEL3 inputs.
RESET	Alarm reset input.	Release the alarm status. The error counter is reset when the alarm is reset.
TVSEL	Control mode switching	<div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 10px;"> Position ↔ speed Position ↔ torque Torque ↔ speed </div> <div style="font-size: 2em; margin-right: 10px;">}</div> <div>Enables control mode switching</div> </div>
IPG	Pulse prohibition input. Digital input to inhibit the position reference pulse.	
VSEL1	Internal speed selection 1	Input to select the desired speed setting during internally speed operation. The speed selector is combining this input with VSEL2 and VSEL3 inputs.
NOT	Reverse run prohibited	Overtravel prohibited: stops servomotor when movable part travels beyond the allowable range of motion.
POT	Forward run prohibited	
SEN	Sensor ON input. Initial data request signal when using an absolute encoder.	
SENGND	Sensor ON signal ground.	
BAT (+)	Backup battery connection terminals when the absolute encoder power is interrupted. Do not connect when an absolute encoder battery cable for backup is used.	
BATGND (-)		
FG	Frame ground	

Output signals (for analog/pulse servo drives)

Signal name	Function		
A	Encoder phase A+	Encoder signals are output according Encoder Dividing Numerator parameter. This is the line-driver output (equivalent to R422).	
	Encoder phase A-		
B	Encoder phase B+		
	Encoder phase B-		
Z	Encoder phase Z+		
	Encoder phase Z-		
	Encoder phase-Z output	Phase Z is output for encoder signals. Open-collector output.	
COM	Encoder phase-Z common		
BR	Brake release signal output	Timing signal for operating the electromagnetic brake on a motor.	
BRCOM			
RDY	Servo ready: ON if there is not servo alarm when the control/main circuit power supply is turned ON.		
RDYCOM			
ALM	Servo alarm: turns OFF when an error is detected.		
ALMCOM			
SPD	Motor rotation speed detection. This output turns ON when the motor rotation speed reaches the speed set in a parameter.		
SPDCOM			
PCOMP	Positioning complete output: turns ON when position error is equal to setting parameter.		
PCOM			
P2	Position complete output 2	The function of output signals allocated to pins 11,10, 34 to 39 can be changed with these options by parameters settings.	
CMD	Position command status		
0SP	Zero speed		
ARN1	Warning 1		
ARN2	Warning 2		
ALM-ATB	Alarm output		
SPC	Speed conformity output		
CMD	speed command status		
LIMIT	Speed limit detection		
LIMIT	Torque limit detection		
JTM1	General-purpose Output 1		Use the parameter settings to assign the desired function
JTM2	General-purpose Output2		
JTM	General-purpose common

CN3)

		Model
Power supply cable RS232	2 m	R88A-CCG002P2

Connectors

Specifications	Model
I/O connector kit, 50 pins (for CN1)	R88A-CNU11C

Computer software

Specifications	Model
Configuration and monitoring software tool for servo drives and inverters. (CX-drive version 1.70 or higher)	CX-drive
Complete OMRON software package including CX-drive. (CX-One version 3.10 or higher)	CX-One

Filter model	Rated current	Leakage current	Rated voltage
R88A-FIK102-RE	2.4 A	3.5 mA	250 VAC single-phase
R88A-FIK104-RE	4.1 A	3.5 mA	
R88A-FIK107-RE	6.6 A	3.5 mA	
R88A-FIK114-RE	14.2 A	3.5 mA	

Resistor

Resistor unit model	Specifications

X-ON Electronics

Largest Supplier of Electrical and Electronic Components
