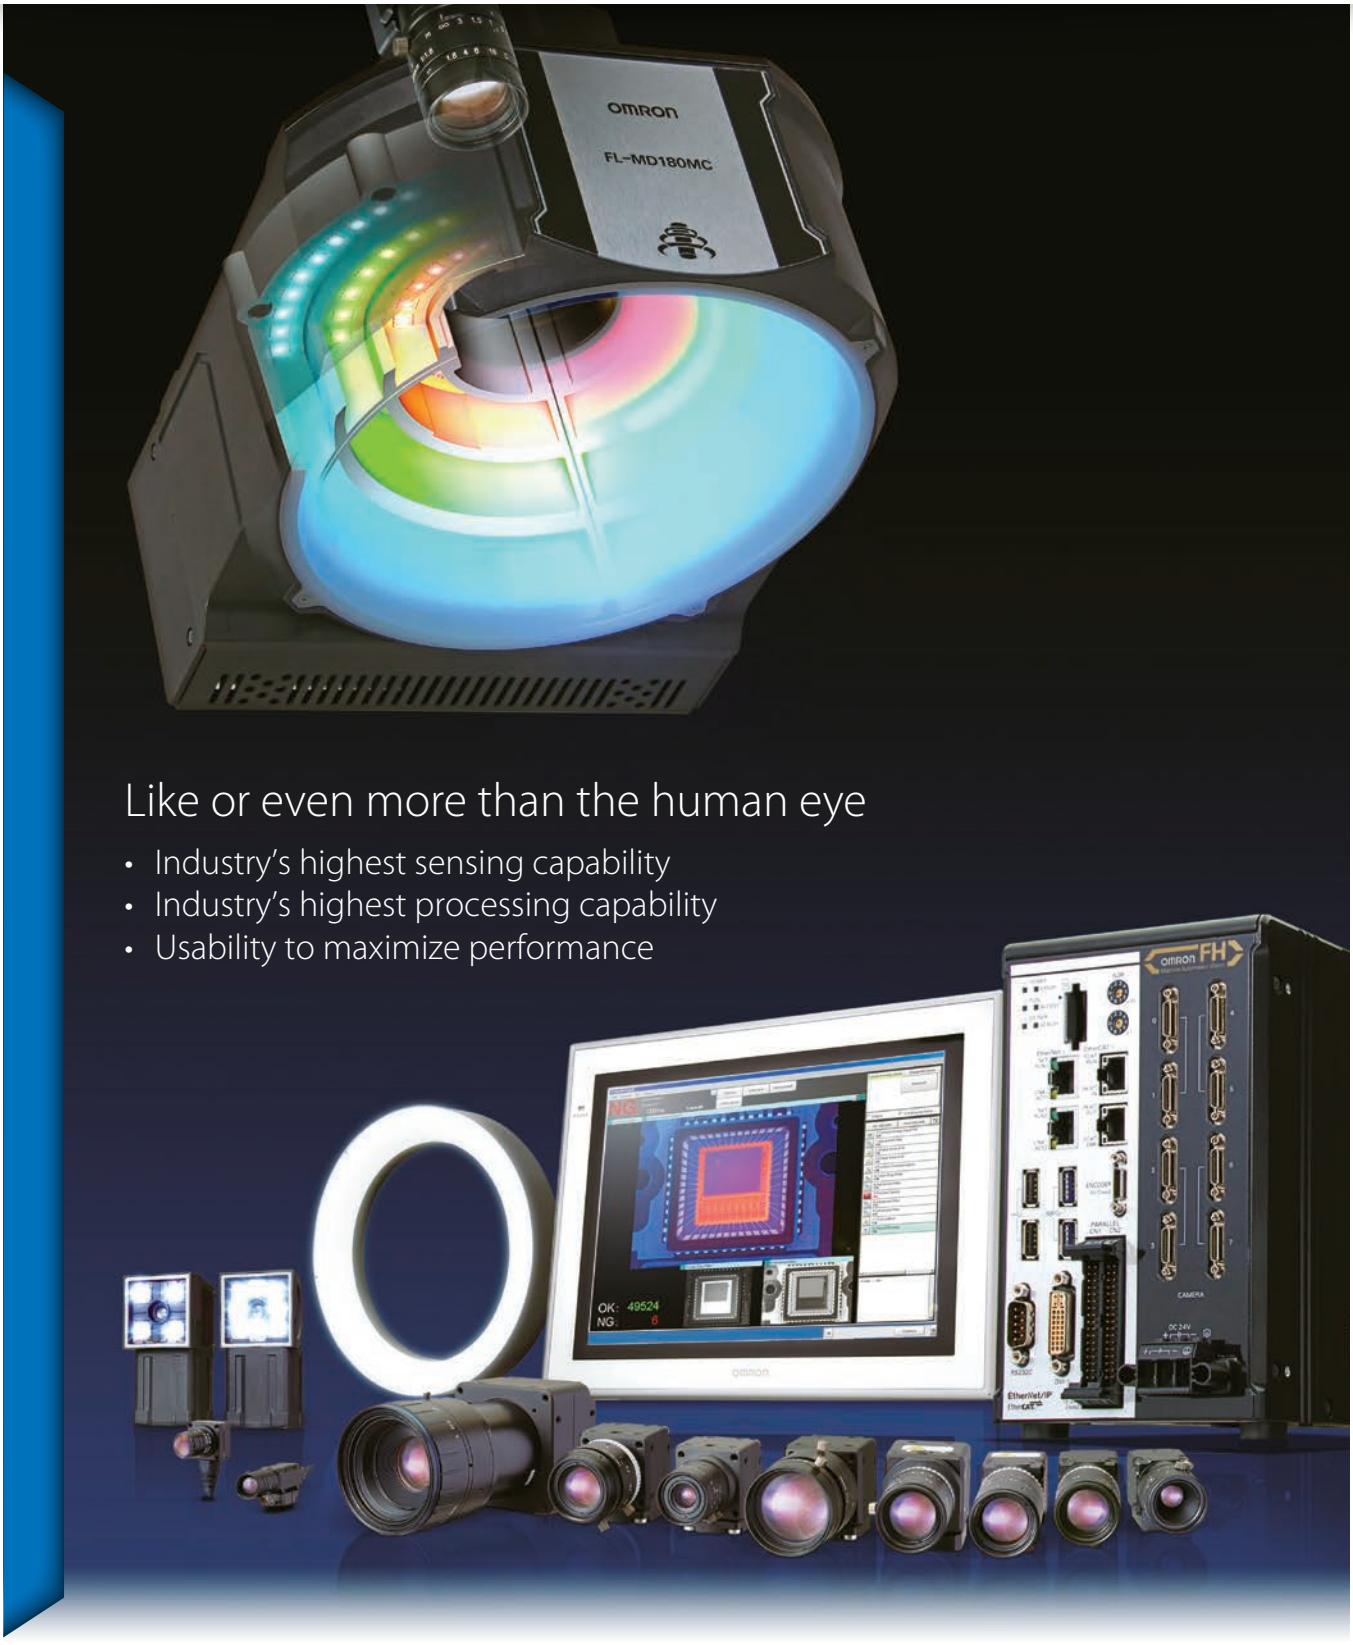
Vision System

FH Series



SYSMAC
always in control

High-speed, high-accuracy inspection and - like or even more than the human eye

Many cameras are installed in almost all production processes to automate quality inspections and ensure security and safety. This means that the amount of image information is increasing. Moreover, changes in products require higher levels of performance for vision systems used for automation.

In these circumstances, Omron further developed our FH Series to meet rapidly growing automation needs and higher performance requirements.

We help you solve your inspection and measurement issues through integration of high-speed, high-resolution compact cameras jointly developed with Omron Sentech Co., Ltd. and our unique algorithms.

Packed with technologies, this vision system will enable more customers to easily employ image processing.

We offer products which bring automation to manufacturing sites, contributing to manufacturing around the world.

* Based on Omron investigation in June 2018.

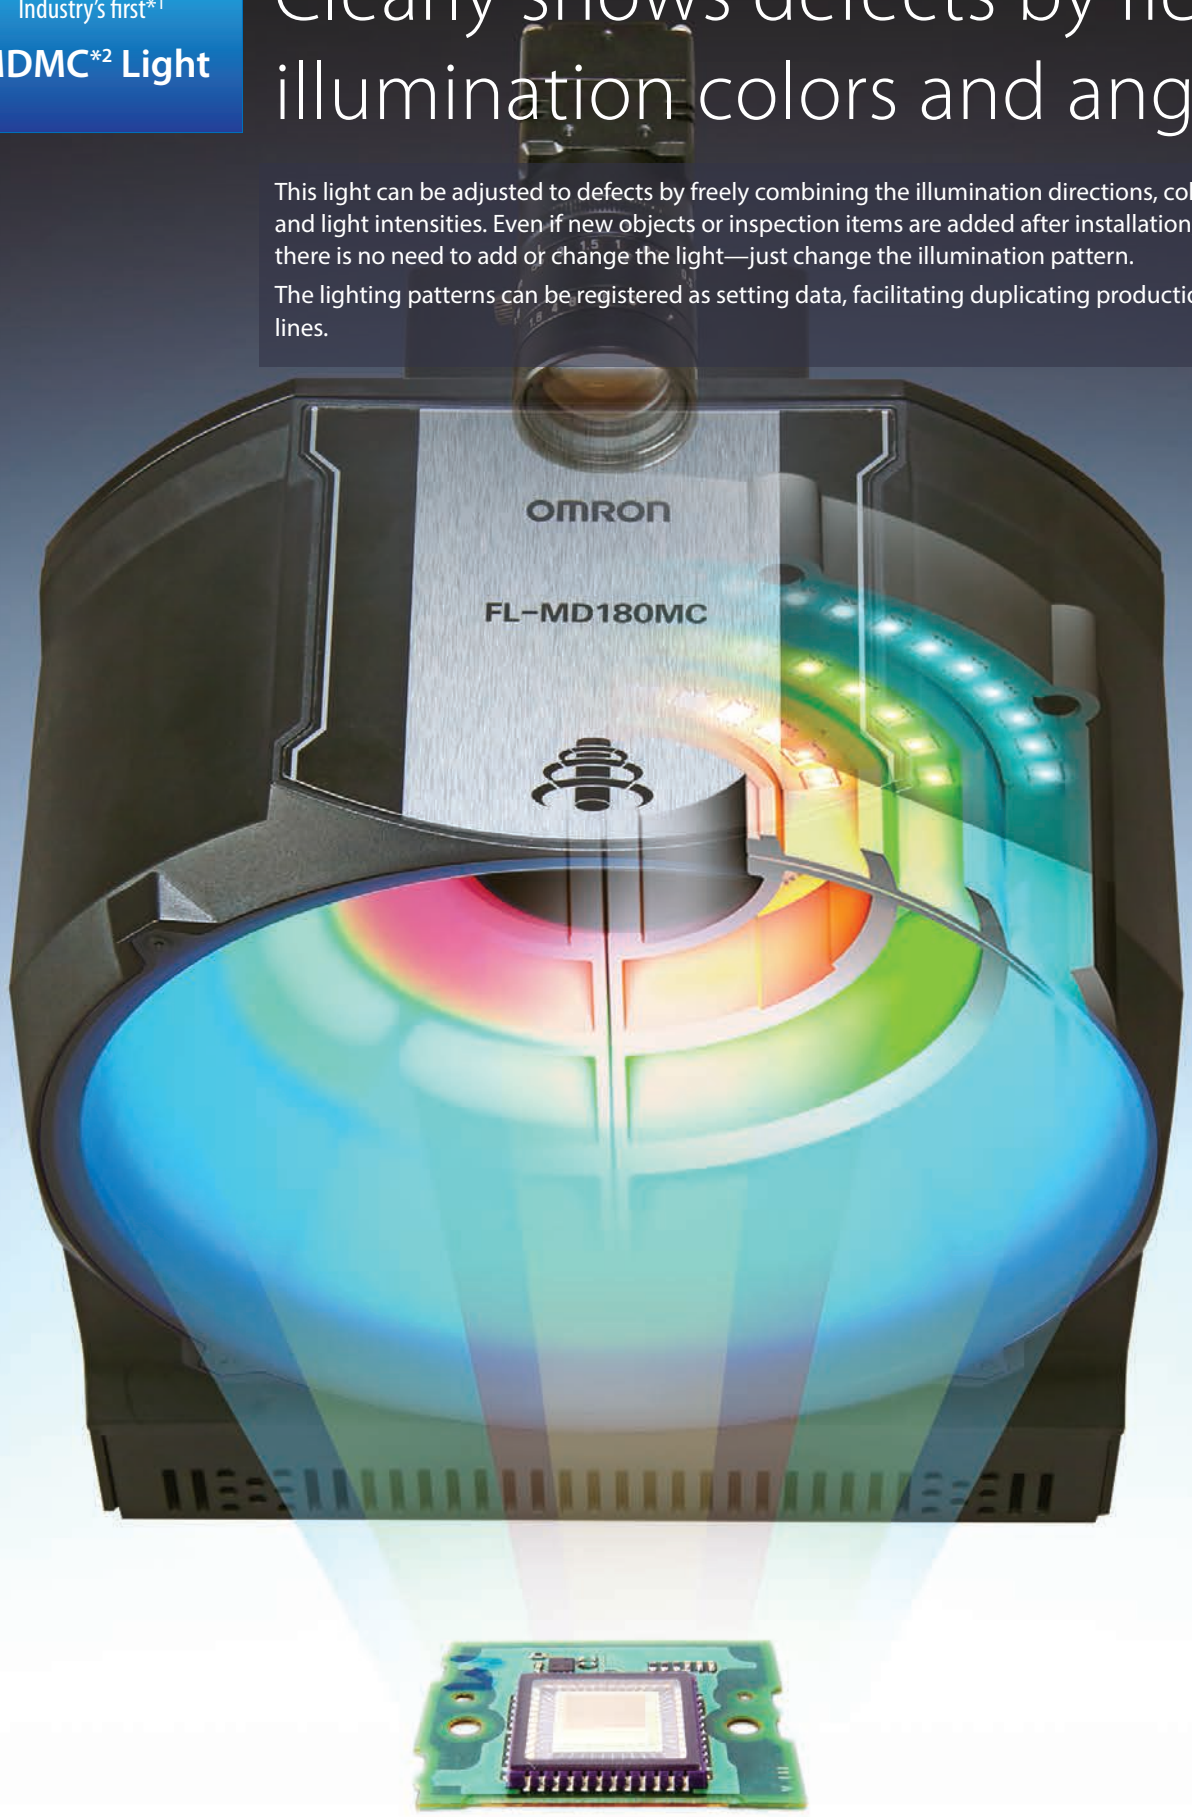
Industry's first*1

MDMC*2 Light

Clearly shows defects by flexibly illumination colors and angles

This light can be adjusted to defects by freely combining the illumination directions, colors, and light intensities. Even if new objects or inspection items are added after installation, there is no need to add or change the light—just change the illumination pattern.

The lighting patterns can be registered as setting data, facilitating duplicating production lines.

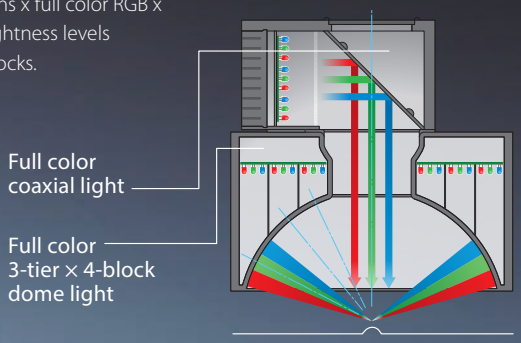


*1. Based on Omron investigation in June 2018.
*2. MDMC…Multi-Direction Multi-Color

changing

Illumination structure

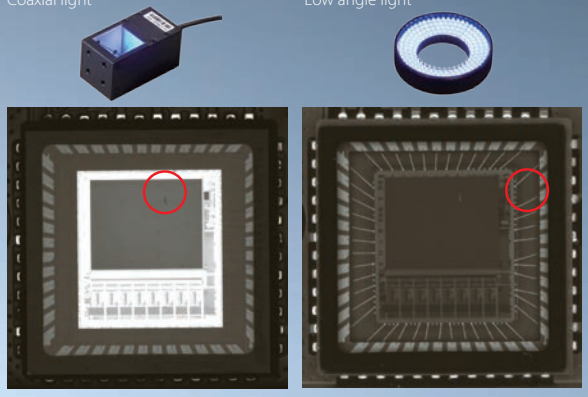
You can choose the best pattern by combining illumination directions x full color RGB x 128 brightness levels of 13 blocks.



Standard light

Different lights are required for different defects

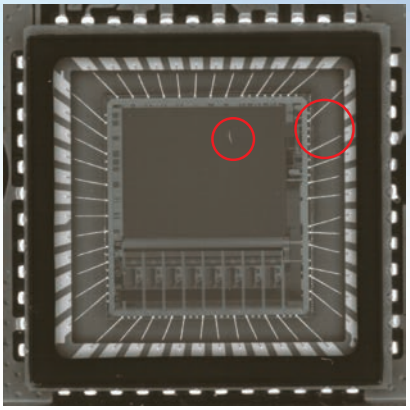
Glass surface inspection	Wire inspection
Coaxial light	Low angle light



MDMC Light

One light clearly shows both broken wires and dirt on elements

Inspection for broken wires and dirt on elements



Photometric Stereo Light

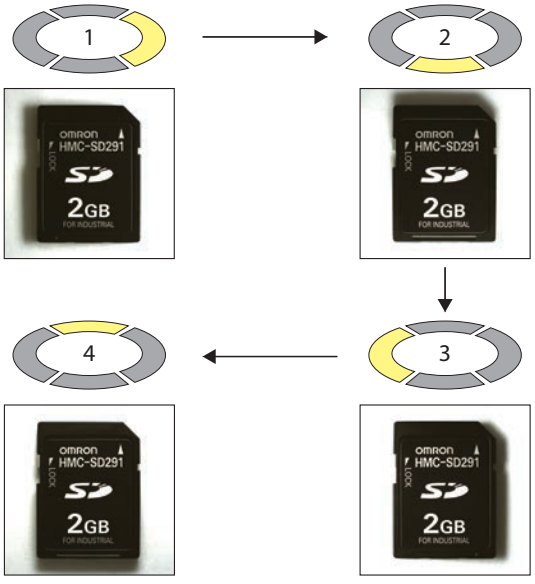
Shows defects accurately

The new FH Photometric Stereo Light can be used with standard or high-resolution cameras up to 20.4 Mpix. To detect dents and surface damages with high accuracy choose a 5, 12 or 20.4 Mpix high-speed camera.

Standard light	Extracts scratches only	Extracts characters only
	(Shape)	(Texture)

Principle explanation

Four lights are lit in turn, and variations in brightness are analyzed. Printed characters with little variation in brightness even under different illumination directions are extracted as texture, and a dent with huge variation in brightness is extracted as a shape.



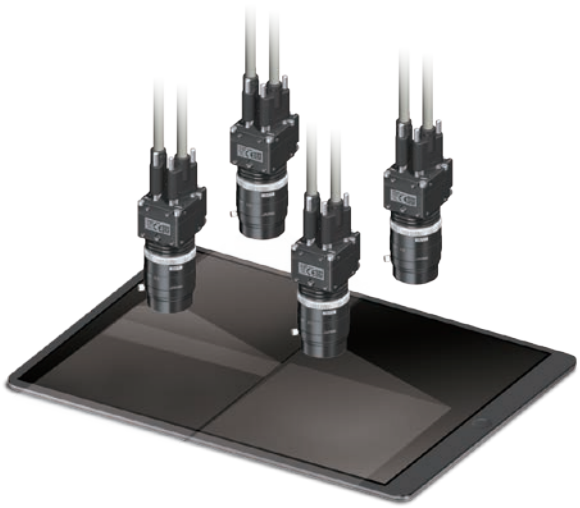
Industry's highest*
Speed and Resolution

Industry's highest* image resolution by new high resolution cameras

Expand the field of view by combining images at high speeds

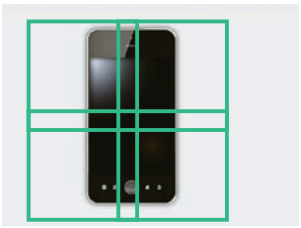
Panorama shooting with multiple cameras

Our unique panorama image processing enables images shot by up to four cameras to be combined into one image. An overall image of a wide or large object can be captured, which is impossible using a conventional method that simultaneously transfers images from multiple cameras.



<Combining methods>

2x2 square



Panorama

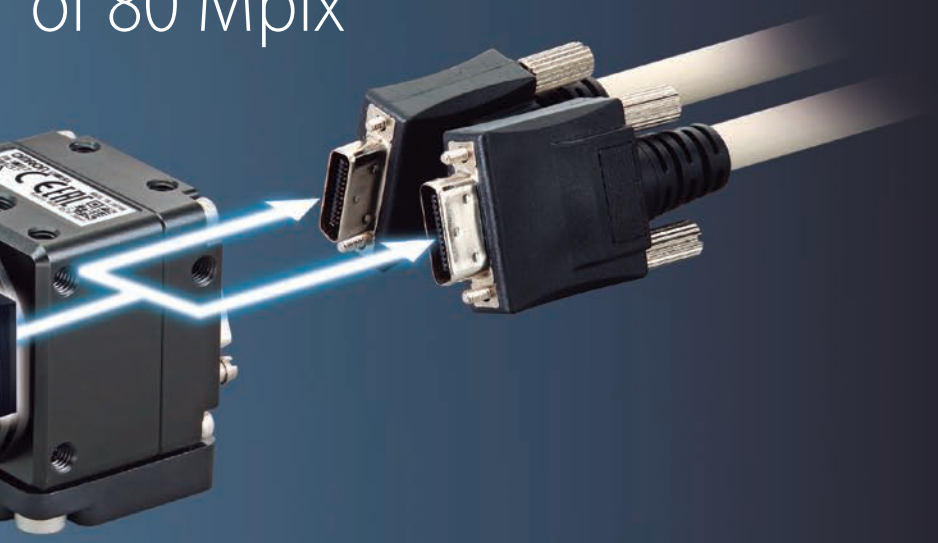
of 80 Mpix



Ultra-high-speed sensing technology in a compact design

High-resolution cameras capture a wide field of view, which can cause image transfer bottlenecks that increase production cycle times. We use a new CMOS image element and dual transfer technology to capture high-resolution images and transfer images at high speeds.

This facilitates applications that previously required multiple cameras or a mechanism to move a camera.

A wide variety of cameras, from 0.3 to 20.4 Mpix

You can select the best combination of camera and lens for your application.

models

Large capacity for image processing

As the use of high-resolution cameras or multiple images for high-quality inspections or wide-field inspections is increasing, vision sensors that can handle increasing data volumes are required. The FH-5050 High-speed, Large-capacity Controller has two times the RAM capacity of our previous models, enabling up to four 20.4 Mpix cameras to be connected. In addition, its CPU processes captured images 4 times faster than our previous models.

Controller	Camera

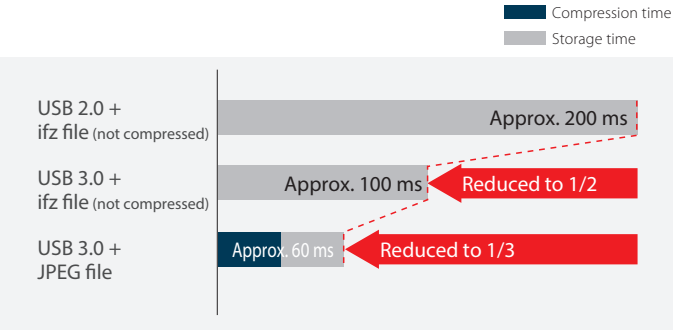
FH-2050 Series FH-5050 Series	✓	✓

High-speed image storage

[USB 3.0 ports] [High-speed image compression]

Image data is so large that conventional controllers could not store all images due to limited storage time and capacity. The new high-speed, large-capacity controller has USB 3.0 ports and algorithms improved to compress image data at high speed, enabling all images to be stored to meet increasing needs in quality control.

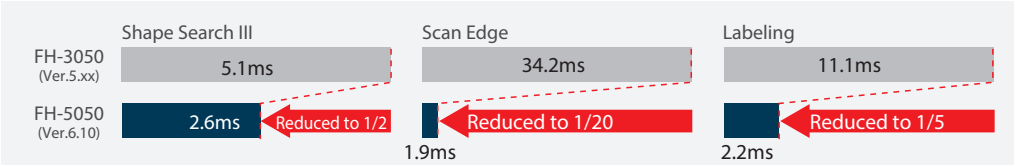


The times in the figure above are provided for reference only and their accuracy cannot be guaranteed.
They are measured under the following conditions:
- FH-5050 Controller
- 5 Mpix monochrome images
- Size of converted JPEG file: 0.6 MB

* Based on Omron investigation in June 2018.

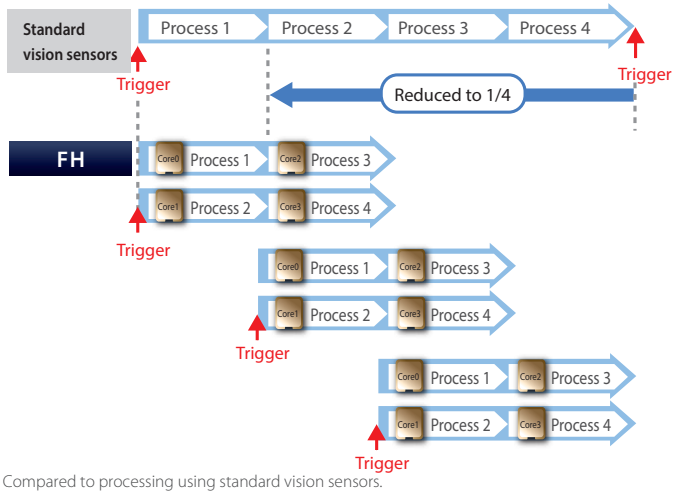
High-speed measurement

The improved algorithms of processing items significantly increase processing speed.

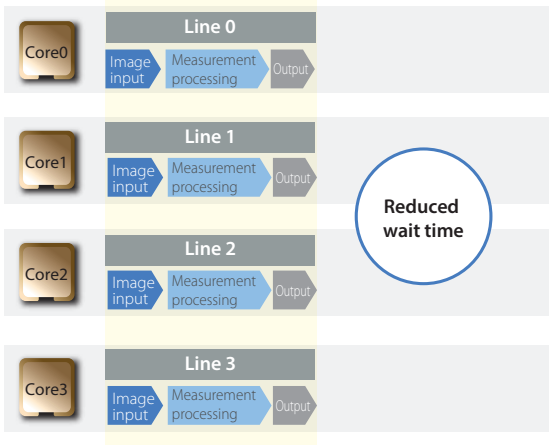


Parallel processing of multiple lines

Trigger interval reduced by up to 75%*



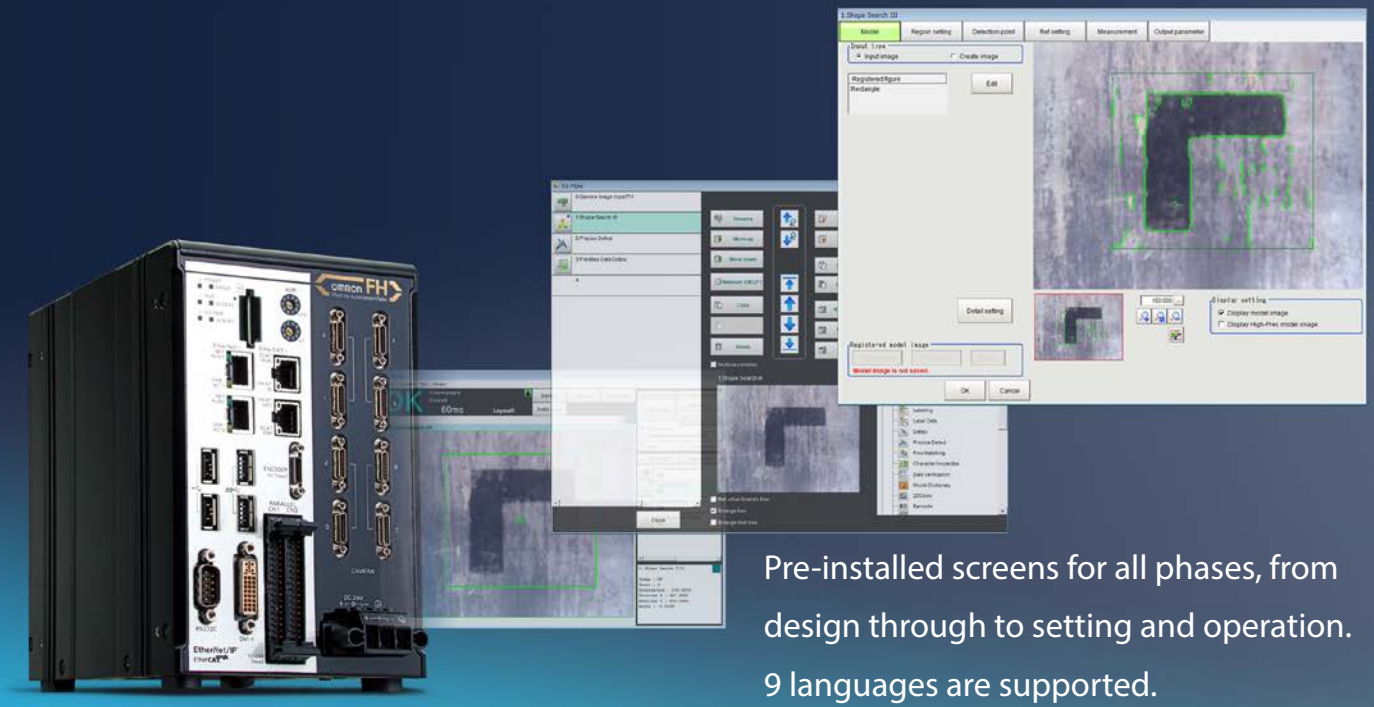
Process multiple lines without waiting



* Compared to processing using standard vision sensors.

GUI for designers

Intuitive design interface reduces complexity

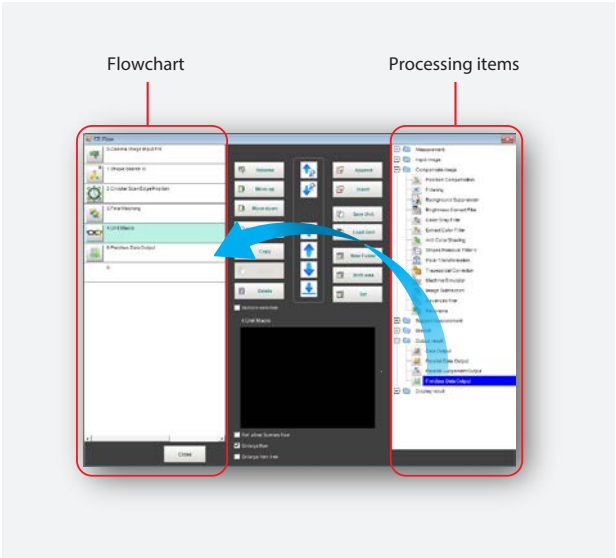


Pre-installed screens for all phases, from design through to setting and operation.
9 languages are supported.

Build measurement process with flowchart programming

Inspection and measurement flow design

Just drag and drop pre-installed processing items to build a measurement process.
The processing order can be defined, facilitating conditional branching.

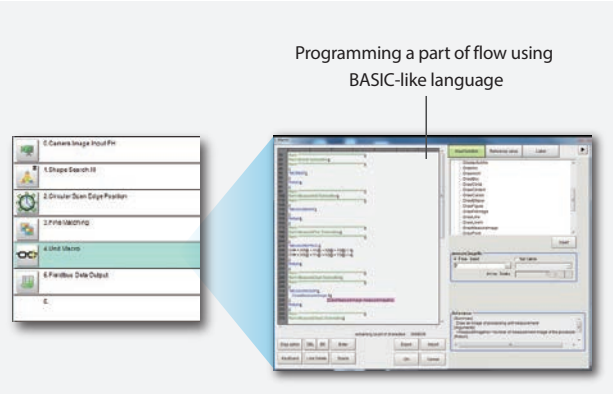


Unit Macro

Macros let you easily achieve flow control that normally requires complex programming from the user interface.
The BASIC-like programming language facilitates the macro creation.

Example:

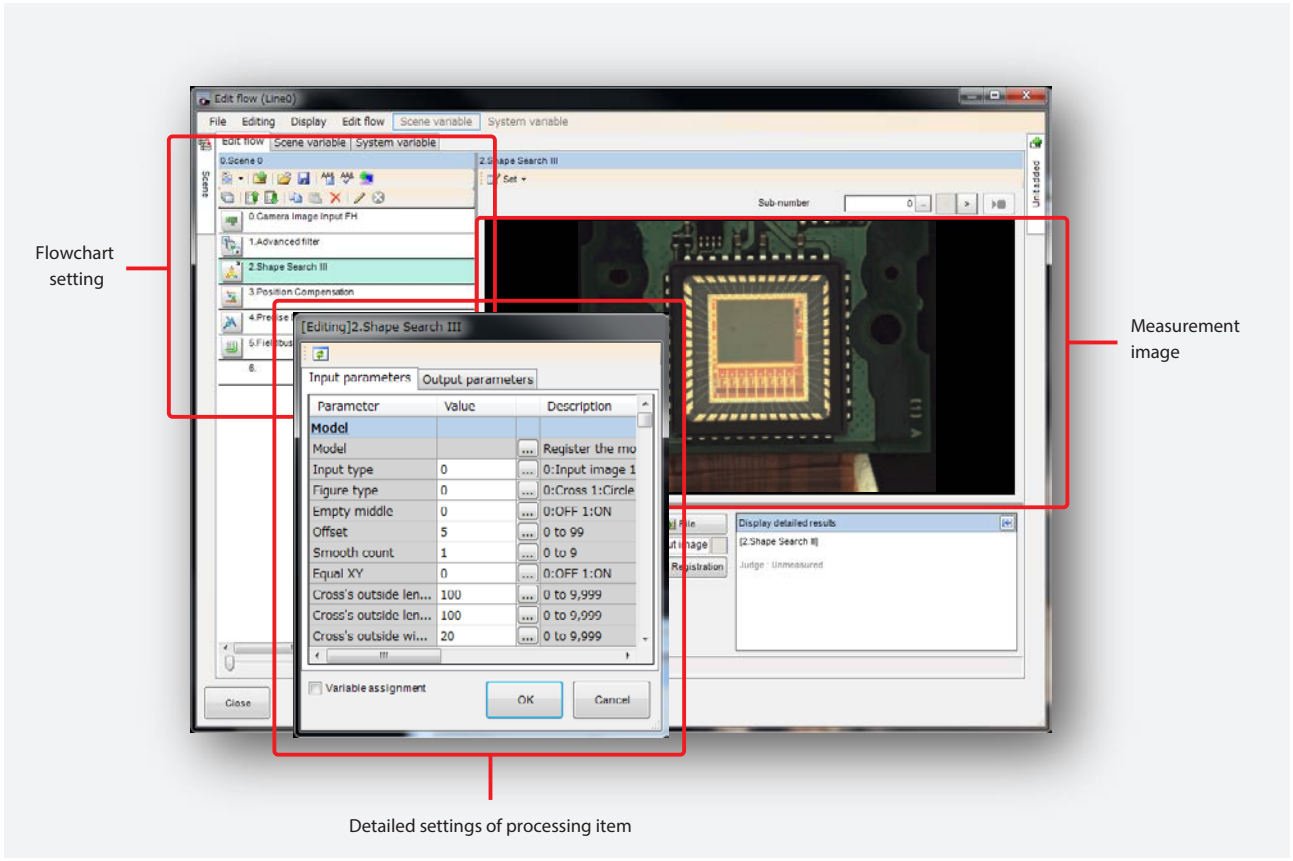
Some of the often-used processing (e.g., scene change + measurement start, data read + save) can be combined into one unit. This unit can be reused for other controllers.



Simple setting with menus

Total Design Management Editor

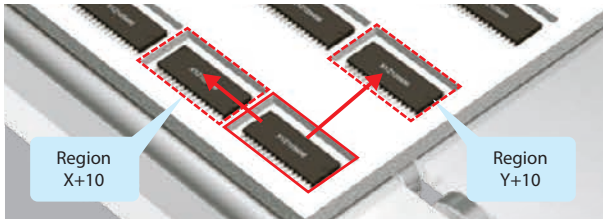
The FH Series has a new design interface that allows you to design complex measurement processes while managing variables.
This simple GUI manages complicated branching processes and data sharing across measurement scenes and eliminates the need to switch screens.



Example 1: Repeat same measurement while shifting region

Previously, to inspect aligned parts or divided regions, the same processing items needed to be set many times, which made the inspection flowchart long. The FH Series allows you to combine variables and calculation to refer the same processing item repeatedly while shifting the measurement region.

External inspection of all electronic parts on a pallet

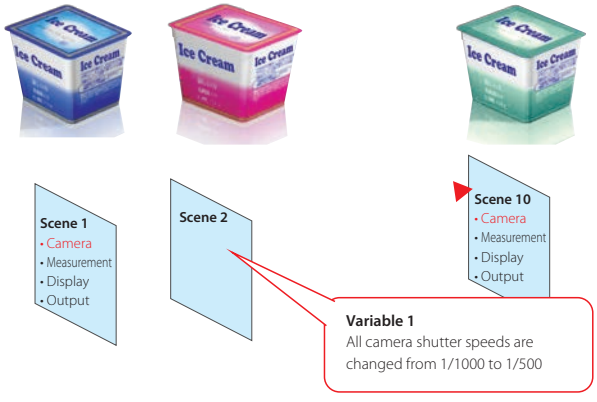


Same conditions
- Judgment value
- Extraction level
-
-

Example 2: Set a common value for scenes

A variable can be used when the same parameter is used for two or more scenes or processing items, such as camera shutter speed and reference point for positioning. This simplifies the inspection flowchart, reducing setting errors and preventing you from forgetting to change settings.

External inspection of objects with different colors



GUI for operators

Operation interface optimized for use at production sites

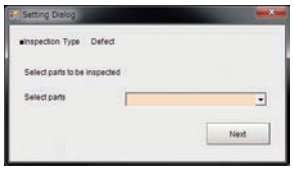
Drag & drop pre-installed interface to easily customize to your needs.

Prevent incorrect operation at production site

Show only parameters you change everyday

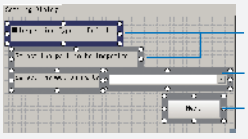
The processing item setting window includes parameters for initial setting and for daily adjustments. To prevent incorrect operation, you can customize the adjustment window to show only parameters that are required for your daily operation.

Example 1:
Show only necessary parameters



Example 2: Show a wizard

Easy setting Just select objects from the list of dialog boxes and place them. No programming required.

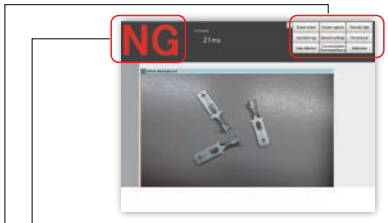


Label: Any character string can be displayed in any desired position
Drop-down list: Options can be set
Button: Operation that is performed when the button is pressed can be set

Show only menus you need

Hide unnecessary windows to make operation easy and avoid problems due to incorrect operations.

Customized operation interface



Enlarge the result to see it more easily

The display size can be changed by dragging.

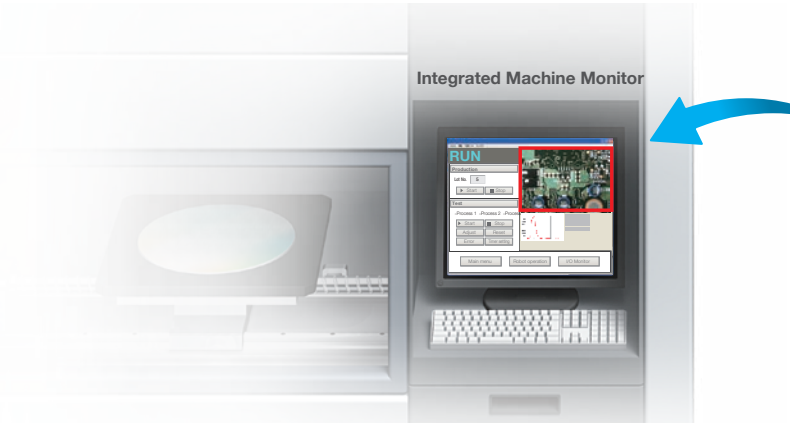
Add short-cut buttons to daily functions

Buttons can be added easily from the menu.

More customization for machine monitors

Supports .NET controls for integration into user applications

Microsoft.Net controls are supported to integrate the FH interfaces into a PC-based HMI. You can display FH screens and measurement results by dragging the controls to your HMI software.

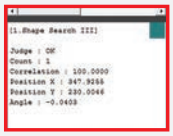


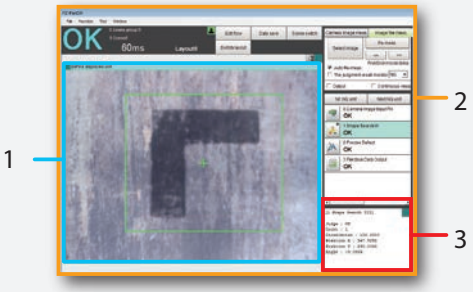
Examples of controls

1. Control to display a measurement image

2. Control to display the entire screen

3. Control to display measurement results





Note. Ask your Omron representative about obtaining controls.

Application Producer development environment to develop original interfaces

The Application Producer (FH-AP1) provides a development environment that lets you customize software pre-installed in the FH Controller. Original interfaces can be created and used with the FH Controller.

Example: Show your desired logo on startup screen

Development environment
Application Producer

Change configuration files for the FH Controller and create installation files

Install the created files on the FH Controller

The customized interface can be used

Processing item library

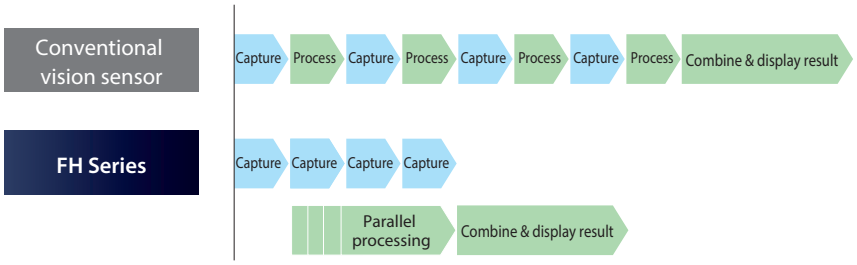
Software for high-speed, high-precision inspections and measurements

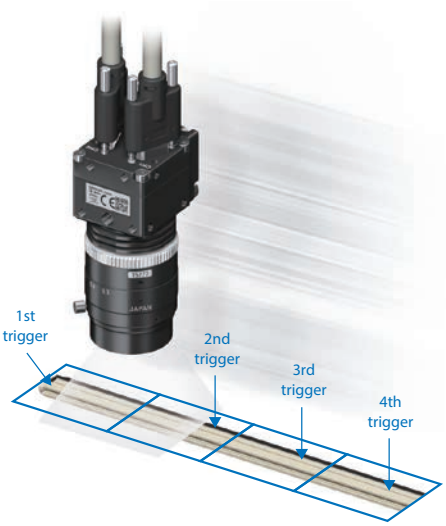
Image input

8 processing items

Multi-trigger Imaging combines measurements fully using multi-core processor

When multiple images are used for measurement, the conventional vision sensor repeats processing after image capture until all images are processed because only one trigger can be input in one flow. In contrast, the Multi-trigger Imaging function to input multiple shutter triggers in one flow allows the FH Series to capture images and process them in parallel, leveraging the speed of the multi-core processor.

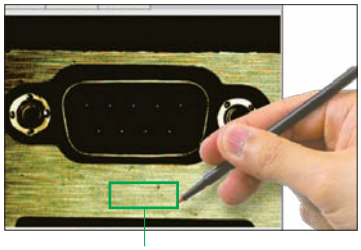




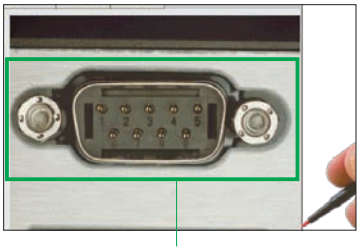
Easy to create HDR images

The Camera Image Input HDR processing item can create optimized HDR images under variable ambient conditions. Normally, to create an HDR image, you must set the imaging conditions for each shooting. However with the FH Series, once you specify the optimum area to capture on the image, the vision system automatically adjusts the shutter speed while capturing images and combines the images.

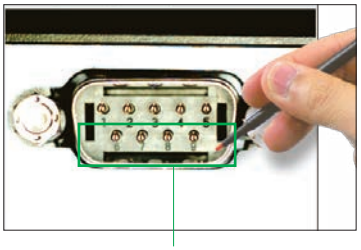
Image optimized for the specified area



Optimized for the bright part



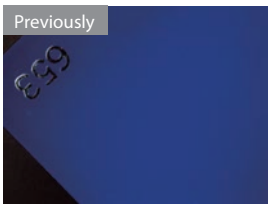
Optimized for the entire field of view



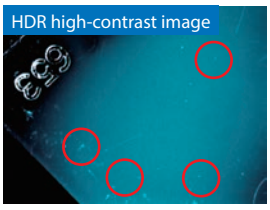
Optimized for the dark part

High-Contrast Mode

Multiple images are combined together and then averaged to reduce their noise component, after which the images are enlarged. This way, only the contrast of the area of interest and its background can be increased.



Low contrast makes the surface appear uniform.



Many scratches and soiled areas can be found.

For other processing items, see P.46

Filtering

14 processing items

30 filters in Advanced Filter

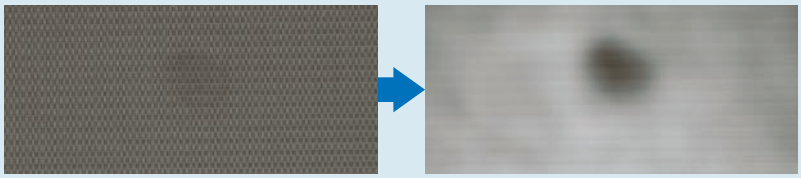
Filters to detect low-contrast defects

The FH Series provides various filters to enhance linear defects in noise and low-contrast defects which cannot be detected by conventional image processing. High-quality external inspection can be achieved by combining filters.

Even Emphasis Unevenness

This filter removes background pattern and enhances low-contrast unevenness.

Example of inspection to detect unevenness in LCD

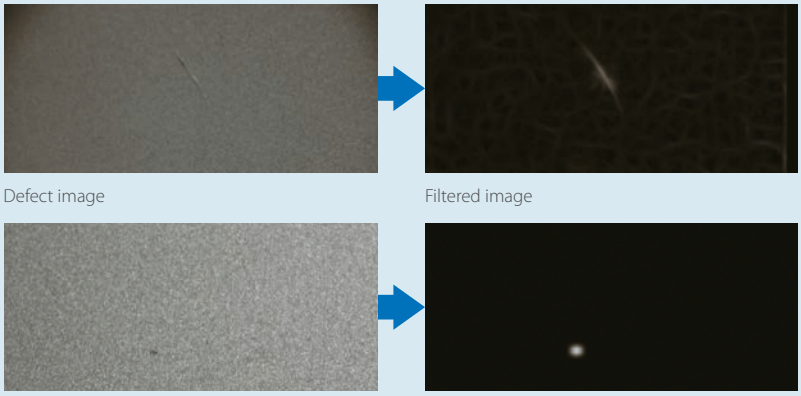


Defect image　　Filtered image

Emphasis Line Defect, Emphasis Circle Defect

These filters enhance defects in high background noise or scratches on embossed surfaces.

Example of inspection to detect scratches on smartphones



Defect image　　Filtered image

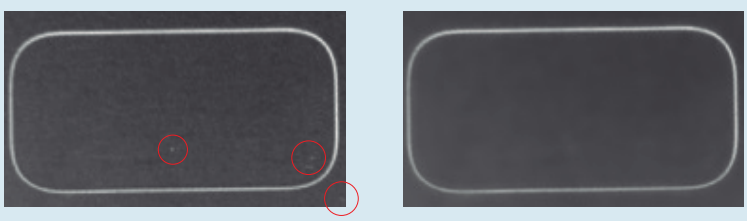
Defect image　　Filtered image

Filters widely used for image processing

Guided Filter, LoG (Laplacian of Gaussian) Filter, and other new filters that are widely used for image processing are added.

Guided Filter

This filter preserves edges while smoothing the background.
Even if an image contains significant noise, the filtered image can be registered as a model for Fine Matching.



Noise image　　Filtered image

For other processing items, see P.46

Inspection & measurement

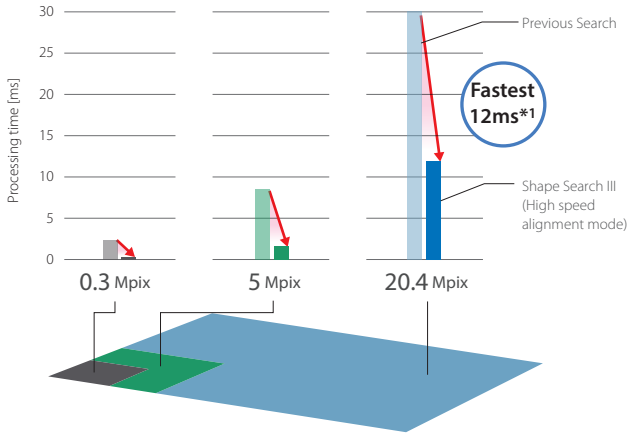
34 processing items

Object detection algorithm Shape Search III

The Shape Search III provides both speed and robustness that are required for high-accuracy positioning. The processing speed of the FH-5050 Controller was further increased.

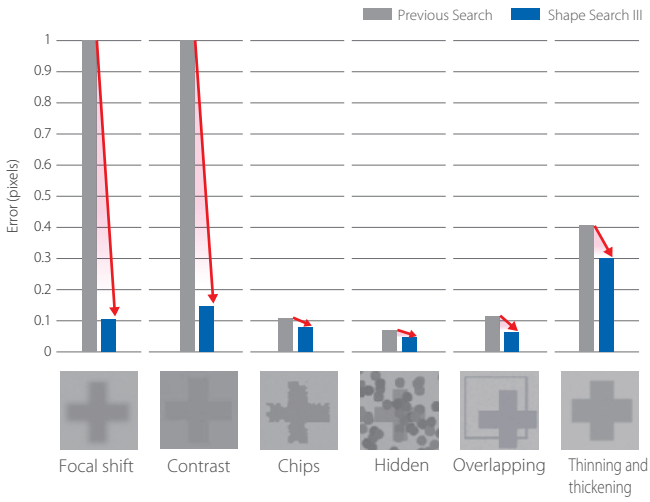
Fastest searching time of 12 ms*1 with 20.4 Mpix camera

A 20.4 Mpix camera can search a positioning mark in as fast as 12 ms *1 and a 5 Mpix camera, which is mostly used for alignment applications, in as fast as 2 ms.



Ultra-high-accuracy, robust positioning

Stable position detection required for ultra-high-accuracy, robust positioning is possible even under the adverse conditions, such as changes of environments and materials, which occur far too often in actual measurement applications.

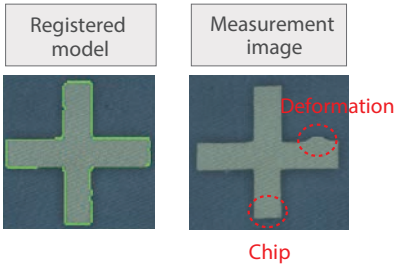


*1. The value measured under our specified conditions is provided for reference.

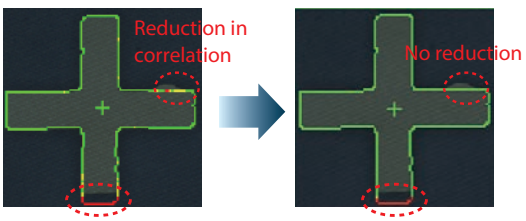
Visualization of comparisons enables easy setting of high-precision searching

Patented/Patent Pending *2

Advanced searching is accompanied by many parameters that must be tuned to match the application. However, it is difficult for the person making the settings to see the internal process. Normally, a lot of time and effort is required to maximize tool performance. But with Shape Search III, you can visualize comparisons between the model data and a part of the measurement object to easily see when comparisons are not optimally matched. Visualization of the comparison level allows for parameters to be adjusted to quickly obtain the best performance.



You can see at a glance the difference between the registered model and measurement image



You can adjust a parameter called the Acceptable Distortion Level to enable measurements without reducing the correlation even if there is distortion. You can easily adjust this parameter while monitoring the comparison.

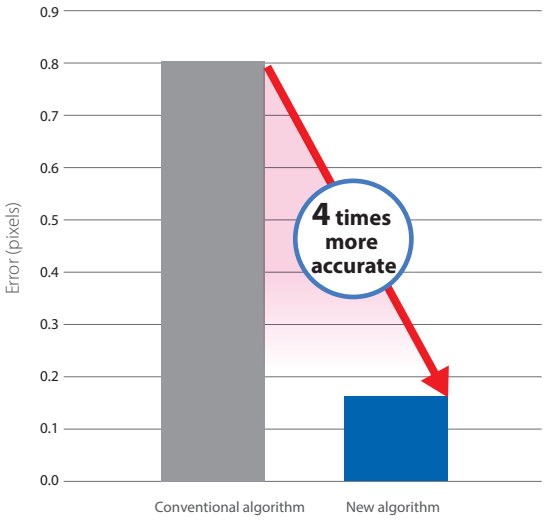
*2. Patent status as of June 2018
US:US9286669, Europe:Pending, China:ZL201410138793.3, Japan:JP6197340

Circular Scan Edge Position accurately detects a circle

The new noise removal algorithm significantly increased robustness. The center and radius of a circle can be obtained accurately from a part of the circle.

High accuracy

The new algorithm achieves four times higher accuracy than our previous models.

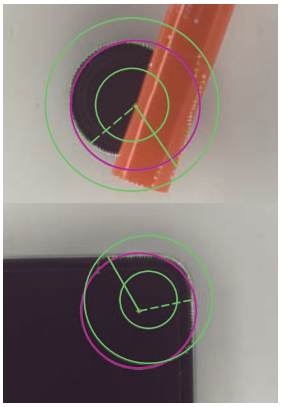


(Variation in measured circles: 90 to 360°)

Robustness

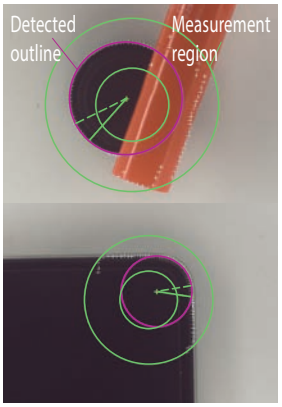
The new noise removal algorithm accurately detects a whole circle from a part of the circle.

Conventional algorithm



The circle is not on the outline of the object

New algorithm



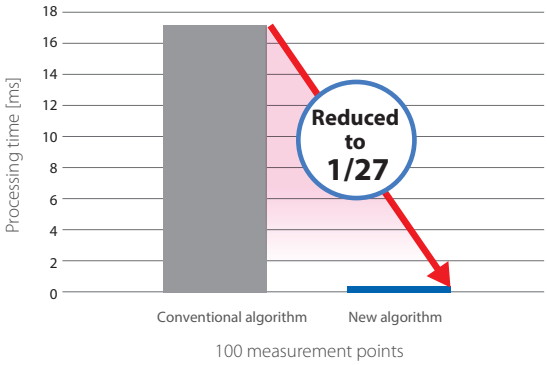
The outline of the object is detected accurately

Scan Edge Position increases speed and stability

The algorithm has been completely redeveloped to drastically increase processing speed and noise removal capability.

High speed

Processing time is reduced to 1/27 of our previous models. Even when measurement points increase, the processing time is within 10 ms.

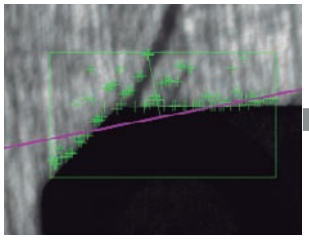


100 measurement points

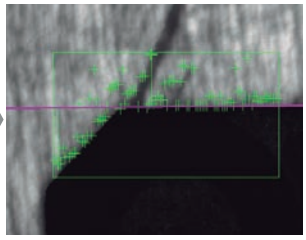
Stability

The new noise removal algorithm accurately estimates lines even when the edges are unclear due to variations in objects or disturbance.

Conventional algorithm



New algorithm



Powerful 2D code reading

The dedicated algorithm for stable 2D code reading under adverse conditions is implemented. Data based on the print quality specifications can be output, which contributes to stable printing.

Print Quality Grading Function • ISO/IEC 15415 • ISO/IEC TR29158

Changing ambient brightness

Chips due to reflection

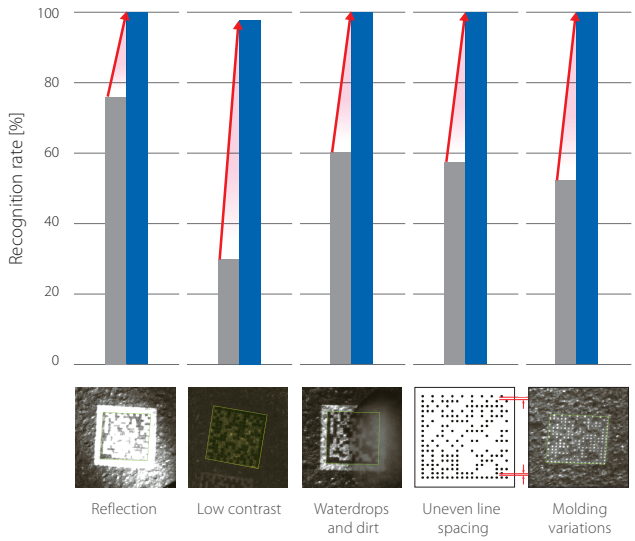
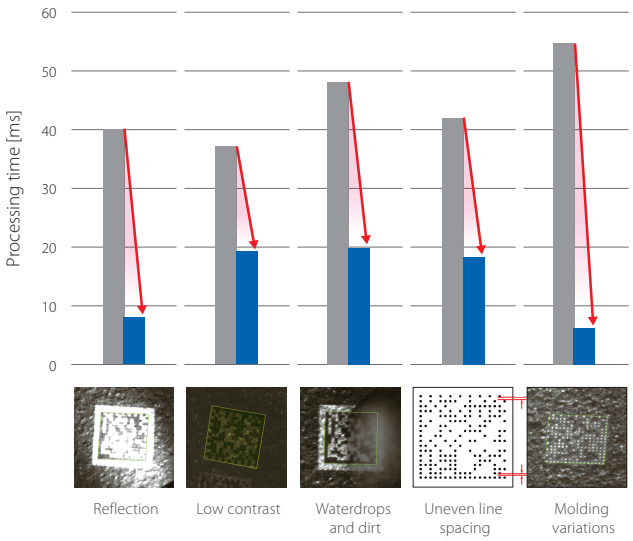
Recognition rate 2 times *



High speed 3 times *



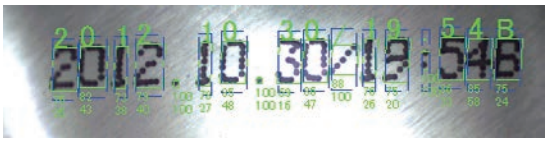
*. The average value measured under our specified conditions is provided for reference.

For other processing items, see P.46

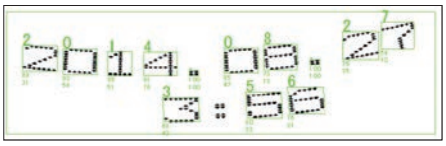
Stable reading of difficult-to-read characters (OCR)

Printed characters can be too close to each other, and characters can be printed on curved surfaces. Even in these cases, stable reading is possible.

Touching characters



Curved character strings

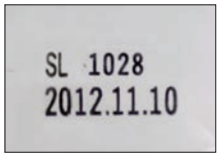


Easy installation with built-in dictionary

Many previous character reading methods required dictionary setup before usage, which was a tedious step. The built-in dictionary developed through our long and rich experiences on FA sites includes a variety of fonts and possible character variations, eliminating the need of dictionary setup. You can also add non-conventional characters when special fonts are read.

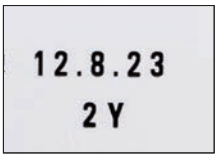
Characters from most printers can be read, including dot and impact printers.

Approx. 80 different fonts



Hot printer

Inkjet printer



Thermal printer

Laser marker

For other processing items, see P.47

Character Inspection for special fonts

Character Inspection recognizes characters based on pattern search using the dictionary set up by the user. This search-based reading enables special fonts and non-alphanumeric characters to be inspected. Automatically extracting a model and selecting an index from the list help you easily set up your dictionary.

Inspection of special fonts

Special fonts

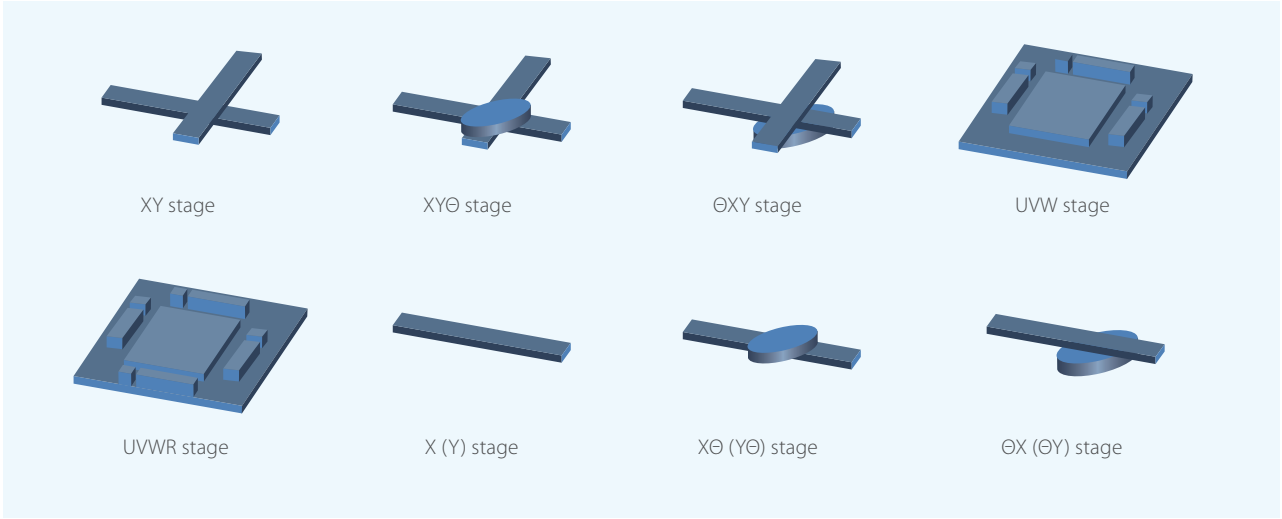
Stage Data for single axis + θ axis stage alignment

The single axis + θ axis stages which are popular today as well as UVW stages can be used. The use of the same axis for both handling and positioning simplifies machine configuration.



Manual Position Setting avoids stopping a machine

When an object cannot be detected, you can set the mark positions manually. The FH Series outputs the travel distance of the external device by referring the manually set values and measured coordinates. Manual Position Setting allows the FH Series to continue positioning without stopping the production line.

	Long-distance Camera Cable Cable length: 15 m *2	**FZ-VS4 15M**
	Long-distance Right-angle Camera Cable *1 Cable length: 15 m *2	**FZ-VSL4 15M**
	Cable Extension Unit Up to two Extension Units and three Cables can be connected. (Maximum cable length: 45 m *2)	**FZ-VSJ**

*1 This Cable has an L-shaped connector on the Camera end.
*2 The maximum cable length depends on the camera being connected, and the model and length of the cable being used. For further information, refer to the *Cameras / Cables Connection Table and Maximum Extension Length Using Cable Extension Units FZ-VSJ* table.
When a High-speed Digital CMOS Camera FH-S□02/-S□04/-S□12/-S□21R is used in the high speed mode of transmission speed, two camera cables are required.
*3 Insert the cables length into □ in the model number as follows. 2 m = 2, 3 m = 3, 5 m = 5, 10 m = 10

*1 The FH-S□□□ enables switching between standard and high speed modes. In high speed mode, images can be transferred approximately two times faster than in standard mode, but the connectable cable length will be shorter.

*2 The FH-S□□□ has two channels to connect Camera Cables. Connection to two channels makes image transfer two times faster than connection to one channel: high speed mode using two channels can transfer approximately four times as many images as standard mode using one channel.

*3 Each channel can be used to connect up to two Cable Extension Units: up to four extension units, two channels x two units, can be connected by using two channels.

Connection Configuration

	Connection configuration using the maximum length of Camera Cables	Remarks
Configuration 1		
Configuration 2		Configuration 3		
Configuration 4		
*4 Select the Camera Cables between the Controller and Extension Unit, between the Extension Units, and between the Extension Unit and Camera according to the connected Camera.
Different types or lengths of Camera Cables can be used for (1), (2), and (3) as well as for (4), (5), and (6). However, the type and length of Camera Cable (1) must be the same as those of Camera Cable (4), (2) must be the same as (5), and (3) must be the same as (6).

Touch Panel Monitor

Item	Descriptions	Model
	Touch Panel Monitor 12.1 inches For FH Sensor Controllers *	**FH-MT12**

* FH Series Sensor Controllers version 5.32 or higher is required.

Touch Panel Monitor Cables

Item	Descriptions	Model
	DVI-Analog Conversion Cable for Touch Panel Monitor Cable length: 2 m, 5 m or 10 m	**FH-VMDA ☐M *1**
	RS-232C Cable for Touch Panel Monitor Cable length: 2 m, 5 m or 10 m	**XW2Z-☐☐☐PP-1 *2**
	USB Cable for Touch Panel Monitor Cable length: 2 m or 5 m	**FH-VUAB ☐M *1**

*1 Insert the cables length into ☐ in the model number as follows. 2 m = 2, 5 m = 5, 10 m = 10
*2 Insert the cables length into ☐☐☐ in the model number as follows. 2 m = 200, 5 m = 500, 10 m = 010.

A video signal cable and an operation signal cable are required to connect the Touch Panel Monitor.

Signal	Cable	2 m	5 m	10 m
Video signal	DVI-Analog Conversion Cable	Yes	Yes	Yes
Touch panel operation signal	USB Cable	Yes	Yes	No
	RS-232C Cable	Yes	Yes	Yes

Parallel I/O Cables/Encoder Cable

Item	Descriptions	Model
	Parallel I/O Cable *1 Cable length: 2m, 5m or 15m	**XW2Z-S013-☐** *2
	Parallel I/O Cable for Connector-terminal Conversion Unit *1 Cable length: 0.5 m, 1 m, 1.5 m, 2 m, 3 m, 5 m Connector-Terminal Block Conversion Units can be connected (Terminal Blocks Recommended Products: OMRON XW2R-☐34G-T)	**XW2Z-☐☐☐EE** *3
	Connector-Terminal Block Conversion Units, General-purpose devices	**XW2R-☐34GD-T** *4
	Encoder Cable for line-driver Cable length: 1.5 m	**FH-VR 1.5M**

*1 2 Cables are required for all I/O signals.
*2 Insert the cables length into ☐ in the model number as follows. 2 m = 2, 5 m = 5, 15 m = 15
*3 Insert the cables length into ☐☐☐ in the model number as follows. 0.5 m = 050, 1 m = 100, 1.5 m = 150, 2 m = 200, 3 m = 300, 5 m = 500
*4 Insert the wiring method into ☐ in the model number as follows. Phillips screw = J, Slotted screw (rise up) = E, Push-in spring = P
Refer to the XW2R Series catalog (Cat. No. G077) for details.

Parallel Converter Cable

When you change to connect the F series, FZ5 series, or FZ5-L series to FH series Sensor Controller, you can convert by using the appropriate parallel converter cable of FH-VPX series under the usable condition.

Item	Applicable Model		Usable Condition	Model
	FZ□ series		• Do not use RESET signal. * • Use with COMIN and COMUT are same power source.	**FH-VPX-FZ**
	FZ□-L35x series		• Do not use RESET signal. *	**FH-VPX-FZL**
	F160 series	F160-C10	• Do not use RESET signal. * • Use with COMIN and COMOUT are same power source. • Do not use DI5 and DI6.	**FH-VPX-F160**
	F210 series	F210-C10	• Do not use RESET signal. * • Use with COMIN and COMOUT are same power source. • Do not use DI8 and DI9.	**FH-VPX-F210**
		F210-C10-ETN		
	F500 series	F500-C10		

* Even if RESET signal cannot be use by conversion, conversion is possible to convert satisfying other usable condition.
Note: Cannot be used for the F160-C10CP/-C10CF.

Recommended EtherCAT and EtherNet/IP Communications Cables

Use Straight STP (shielded twisted-pair) cable of category 5 or higher with double shielding (braiding and aluminum foil tape) for EtherCAT.
Use Straight or cross STP (shielded twisted-pair) cable of category 5 or higher for EtherNet/IP.

*1 Cables with standard RJ45 plugs are available in the following lengths: 0.2 m, 0.3 m, 0.5 m, 1 m, 1.5 m, 2 m, 3 m, 5 m, 7.5 m, 10 m, 15 m, 20 m. Cables with rugged RJ45 plugs are available in the following lengths: 0.3 m, 0.5 m, 1 m, 2 m, 3 m, 5 m, 10 m, 15 m. For details, refer to the Industrial Ethernet Connectors Catalog (Cat. No. G019).
*2 The lineup features Low Smoke Zero Halogen cables for in-cabinet use and PUR cables for out-of-cabinet use. Although the LSZH cable is single shielded, its communications and noise characteristics meet the standards.
*3 Cables colors are available in yellow, green, and blue.
*4 For details, contact your OMRON representative.

Accessories	Instruction manual				

* The image acquisition time does not include the image conversion processing time of the sensor controller.

Small CCD Digital Cameras

Model	FZ-SF	FZ-SFC	FZ-SP	FZ-SPC
Image elements	Interline transfer reading all pixels, CCD image elements (1/3-inch equivalent)			
Color/Monochrome	Monochrome	Color	Monochrome	Color
Effective pixels	640 (H) × 480 (V)			
Imaging area H x V (opposing corner)	4.8 × 3.6 (6.0mm)			
Pixel size	7.4 (μm) × 7.4 (μm)			
Shutter function	Electronic shutter; select shutter speeds from 20 μm to 100 ms			
Partial function	12 to 480 lines			
Frame rate (Image Acquisition Time *)	80 fps (12.5ms)			
Lens mounting	Special mount (M10.5 P0.5)			
Field of vision, installation distance	Selecting a lens according to the field of vision and installation distance			
Ambient temperature range	Operating: 0 to 50 °C (camera amp) 0 to 45 °C (camera head) Storage: -25 to 65 °C (with no icing or condensation)			
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)			
Weight	Approx. 150 g			
Accessories	Instruction manual, installation bracket, Four mounting brackets (M2)		Instruction manual	

* The image acquisition time does not include the image conversion processing time of the sensor controller.

High-speed Digital CCD Cameras

Model	FZ-SH	FZ-SHC
Image elements	Interline transfer reading all pixels, CCD image elements (1/3-inch equivalent)	
Color/Monochrome	Monochrome	Color
Effective pixels	640 (H) × 480 (V)	
Imaging area H x V (opposing corner)	4.8 × 3.6 (6.0mm)	
Pixel size	7.4 (μm) × 7.4 (μm)	
Shutter function	Electronic shutter; select shutter speeds from 1/10 to 1/50,000 s	
Partial function	12 to 480 lines	
Frame rate (Image Acquisition Time *)	204 fps (4.9ms)	
Field of vision, installation distance	Selecting a lens according to the field of vision and installation distance	
Ambient temperature range	Operating: 0 to 40 °C Storage: -25 to 65 °C (with no icing or condensation)	
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)	
Weight	Approx. 105 g	
Accessories	Instruction manual	

* The image acquisition time does not include the image conversion processing time of the sensor controller.

Intelligent Compact Digital CMOS Cameras

Model	FZ-SQ010F	FZ-SQ050F	FZ-SQ100F	FZ-SQ100N
Image elements	CMOS color image elements (1/3-inch equivalent)			
Color/Monochrome	Color			
Effective pixels	752 (H) × 480 (V)			
Imaging area H x V (opposing corner)	4.51 × 2.88 (5.35mm)			
Pixel size	6.0 (μm) × 6.0 (μm)			
Shutter function	1/250 to 1/32,258			
Partial function	8 to 480 lines			
Frame rate (Image Acquisition Time *1)	60 fps (16.7 ms)			
Field of vision	7.5 × 4.7 to 13 × 8.2 mm	13 × 8.2 to 53 × 33 mm	53 × 33 to 240 × 153 mm	29 × 18 to 300 × 191 mm
Installation distance	38 to 60 mm	56 to 215 mm	220 to 970 mm	32 to 380 mm
LED class *2	Risk Group2			
Ambient temperature range	Operating: 0 to 50 °C Storage: -25 to 65 °C			
Ambient humidity range	Operating and storage: 35% to 85% (with no condensation)			
Weight	Approx. 150 g		Approx. 140 g	
Accessories	Mounting bracket (FQ-XL), polarizing filter attachment (FQ-XF1), instruction manual and warning label			

*1 The image acquisition time does not include the image conversion processing time of the sensor controller.
*2 Applicable standards: IEC62471-2

Ratings and Specifications (Cable, Monitor)

Camera Cables

Model	FZ-VS3 (2 m)	FZ-VSB3 (2 m)	FZ-VSL3 (2 m)	FZ-VSLB3 (2 m)
Type	Standard	Bend resistant	Right-angle	Bend resistant Right-angle
Shock resistiveness (durability)	10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times			
Ambient temperature range	Operation and storage: 0 to 65 °C (with no icing or condensation)			
Ambient humidity range	Operation and storage: 40 to 70%RH (with no condensation)			
Ambient atmosphere	No corrosive gases			
Material	Cable sheath, connector: PVC			
Minimum bending radius	69mm	69mm	69mm	69mm
Weight	Approx. 170 g	Approx. 180 g	Approx. 170 g	Approx. 180 g

Long-distance Camera Cables

Model	FZ-VS4 (15 m)	FZ-VSL4 (15 m)
Type	Standard	Right-angle
Shock resistiveness (durability)	10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times	
Ambient temperature range	Operation and storage: 0 to 65 °C (with no icing or condensation)	
Ambient humidity range	Operation and storage: 40 to 70%RH (with no condensation)	
Ambient atmosphere	No corrosive gases	
Material	Cable sheath, connector: PVC	
Minimum bending radius	78 mm	
Weight	Approx. 1400 g	

Cable Extension Unit

Model	FZ-VSJ
Power supply voltage *1	11.5 to 13.5 VDC
Current consumption *2	1.5 A max.
Ambient temperature range	Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35 to 85% (with no condensation)
Weight	Approx. 240 g
Accessories	Instruction Sheet and 4 mounting screws

*1 A 12-VDC power supply must be provided to the Cable Extension Unit when connecting the Intelligent Compact Camera, or the Lighting Controller.

*2 The current consumption shows when connecting the Cable Extension Unit to an external power supply.

Encoder Cable

Model	FH-VR
Vibration resistiveness	10 to 150 Hz single amplitude 0.1 mm 3 directions, 8 strokes, 10 times
Ambient temperature range	Operation: 0 to 50 °C; Storage: -10 to 60 °C (with no icing or condensation)
Ambient humidity range	Operation and storage: 35 to 85%RH (with no condensation)
Ambient atmosphere	No corrosive gases
Material	Cable Jacket: Heat, oil and flame resistant PVC Connector: polycarbonate resin
Minimum bending radius	65 mm
Weight	Approx. 104 g

Touch Panel Monitor

Model		FH-MT12
Major Function	Display area	12.1 inch
	Resolution	1024 (V) × 768 (H)
	Number of color	16,700,000 colors (8 bit/color)
	Brightness	500cd/m ^{2} (Typ)
	Contrast Ratio	600:1 (Typ)
	Viewing angle	Left and right: each 80°, upward: 80°, downward: 60°
	Backlight Unit	LED, edge-light
	Backlight lifetime	About 100,000hour
	Touch panel	4wire resistive touch screen
External interface	Video input	analog RGB
	Touch panel signal	USB
		RS-232C
Ratings	Power supply voltage	24 VDC (21.6 to 26.4 VDC)
	Current consumption	0.5A
	Insulation resistance	Between DC power supply and Touch Panel Monitor FG: 20 MΩ or higher (rated voltage 250 V)
Operating environment	Ambient temperature range	Operating: 0 to 50°C, Storage: -20 to +65°C (with no icing or condensation)
	Ambient humidity range	Operating and Storage: 20 to 85 %RH (with no icing or condensation)
	Ambient environment	No corrosive gas
	Vibration resistance	10 to 150 Hz, one-side amplitude 0.1 mm (Max. acceleration 15 m/s^2) 10 times for 8 minutes for each three direction
	Degree of protection	Panel mounting: IP65 on the front
Operation		Touch pen
Structure	Mounting	Panel mounting, VESA mounting
	Weight	Approx.2.6 kg
	Material	Front panel: PC/PBT, Front Sheet: PET, Rear case: SUS

Note: FH Series Sensor Controllers version 5.32 or higher is required.

Touch Panel Monitor Cables

Model	FH-VMDA (2 m)	FH-VUAB (2 m)	XW2Z-200PP-1 (2 m)
Cable type	DVI-Analog Conversion Cable	USB Cable	RS-232C Cable
Vibration resistance	10 to 150 Hz, one-side amplitude 0.1 mm, 10 times for 8 minutes for each three direction		
Ambient Temperature	Operating Condition: 0 to 50°C, Storage Condition: -10 to 60°C (with no icing or condensation)		
Ambient Humidity	Operating Condition: 35 to 85%RH, Storage Condition: 35 to 85%RH (with no icing or condensation)		
Ambient environment	No corrosive gases		
Material	Cable outer sheath, Connector: PVC		Cable outer sheath: PVC, Connector: ABS/Ni Plating
Minimum bend radius	36 mm	25 mm	59 mm
Weight	Approx.220 g	Approx.75 g	Approx.162 g

LCD Monitor

Model	FZ-M08
Size	8.4 inches
Type	Liquid crystal color TFT
Resolution	1,024 × 768 dots
Input signal	Analog RGB video input, 1 channel
Power supply voltage	21.6 to 26.4 VDC
Current consumption	Approx. 0.7 A max.
Ambient temperature range	Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation)
Ambient humidity range	Operating and storage: 35 to 85% (with no condensation)
Weight	Approx. 1.2 kg
Accessories	Instruction Sheet and 4 mounting brackets

LCD Monitor Cable

Model	FZ-VM
Vibration resistiveness	10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times
Ambient temperature range	Operation: 0 to 50 °C; Storage: -20 to 65 °C (with no icing or condensation)
Ambient humidity range	Operation and storage: 35 to 85%RH (with no condensation)
Ambient atmosphere	No corrosive gases
Material	Cable sheath: heat-resistant PVC Connector: PVC
Minimum bending radius	75 mm
Weight	Approx. 170 g

Note: When you connect a LCD Monitor FZ-M08 to FH sensor controller, please use it in combination with a DVI-I -RGB Conversion Connector FH-VMRGB.

EtherCAT Communications Specifications

Item		Specifications
Communications standard		IEC61158 Type 12
Physical layer		100 BASE-TX (IEEE802.3)
Modulation		Base band
Baud rate		100 Mbps
Topology		Depends on the specifications of the EtherCAT master.
Transmission Media		Twisted-pair cable of category 5 or higher (double-shielded straight cable with aluminum tape and braiding)
Transmission Distance		Distance between nodes: 100 m or less
Node address setting		00 to 99
External connection terminals		RJ45 × 2 (shielded) IN: EtherCAT input data, OUT: EtherCAT output data
Send/receive PDO data sizes	Input	56 to 280 bytes/line (including input data, status, and unused areas) Up to 8 lines can be set. *
	Output	28 bytes/line (including output data and unused areas) Up to 8 lines can be set. *
Mailbox data size	Input	512 bytes
	Output	512 bytes
Mailbox		Emergency messages, SDO requests, and SDO information
Refreshing methods		I/O-synchronized refreshing (DC)

* This depends on the upper limit of the master.

Version Information

FH Series and Programming Devices

Use the latest version of Sysmac Studio Standard Edition/Vision Edition.

FH Series	Version of FH Series	Corresponding version of Sysmac Studio Standard Edition/Vision Edition
FH-5050 (-□) FH-3050 (-□) FH-2050 (-□) FH-1050 (-□)	Version 6.11	Will be supported soon. (Add the ESI file* until it is supported.)
	Version 5.72	Supported by version 1.18 or higher.
	Version 5.71	Supported by version 1.18 or higher.
	Version 5.60	Supported by version 1.15 or higher.
	Version 5.50	Supported by version 1.14.89 or higher.
	Version 5.30	Supported by version 1.10.80 or higher.
	Version 5.20	Supported by version 1.10 or higher.
	Version 5.10	Supported by version 1.07.43 or higher.
	Version 5.00	Supported by version 1.07 or higher. Not supported by version 1.06 or lower.

* Please add the ESI file to the Sysmac Studio to use the FH-series Sensor Controller version 6.10 with the Sysmac Studio. Please contact your OMRON sales representative regarding the ESI file.

Components and Functions

Sensor Controllers
High-speed,
Large-capacity Controller
Standard Controller
(4-camera type)

	Name	Description
[1]	POWER LED	Lit while power is ON.
[2]	ERROR LED	Lit when an error has occurred.
[3]	RUN LED	Lit while the layout turned on output setting is displayed.
[4]	ACCESS LED	Blinks while the internal nonvolatile memory is accessed.
[5]	SD POWER LED	Blinks while power is supplied to the SD memory card and the card is usable.
[6]	SD BUSY LED	Blinks while the SD memory card is accessed.
[7]	EtherCAT RUN LED	Lit while EtherCAT communications are usable.
[8]	EtherCAT LINK/ACT IN LED	Lit when connected with an EtherCAT device, and blinks while performing communications.
[9]	EtherCAT LINK/ACT OUT LED	Lit when connected with an EtherCAT device, and blinks while performing communications.
[10]	EtherCAT ERR LED	Lit when EtherCAT communications have become abnormal.
[11]	EtherNet NET RUN1 LED	Lit while EtherNet communications are usable.
[12]	EtherNet LINK/ACK1 LED	Lit when connected with an EtherNet device, and blinks while performing communications.
[13]	EtherNet NET RUN2 LED	Lit when EtherNet communications are usable.
[14]	EtherNet LINK/ACK2 LED	Lit when connected with an EtherNet device, and blinks while performing communications.

	Name	Description
A	SD memory card installation connector	Install the SD memory card. Do not plug or unplug the SD memory card during measurement operation. Otherwise measurement time may be affected or data may be destroyed.
B	EtherNet connector	Connect an EtherNet device.

FH-1050/FH-3050 Series	FH-1050-10/FH-1050-20 FH-3050-10/FH-3050-20 FH-2050 Series/FH-5050 Series
Ethernet port, EtherNet/IP port, and PROFINET port are sharing use. 	Upper port : Ethernet port Lower port : Ethernet port, EtherNet/IP port, and PROFINET port are sharing use. 
C	USB connector	Connect a USB device. Do not plug or unplug it during measurement operation. Otherwise measurement time may be affected or data may be destroyed.
D	RS-232C connector	Connect an external device such as a programmable controller.
E	DVI-I connector	Connect a monitor.
F	I/O connector (control lines, data lines)	Connect the controller to external devices such as a sync sensor and PLC.
G	EtherCAT address setup volume	Used to set a node address (00 to 99) as an EtherCAT communication device.
H	EtherCAT communication connector (IN)	Connect the opposed EtherCAT device.
I	EtherCAT communication connector (OUT)	Connect the opposed EtherCAT device.
J	Encoder connector	Connect an encoder.
K	Camera connector	Connect cameras.
L	Power supply terminal connector	Connect a DC power supply. Wire the controller independently on other devices. Wire * the ground line. Be sure to ground the controller alone.

* Use the attachment power terminal connector (male) of FH-XCN series.
For details, refer to 5-3 Sensor Controller Installation on Vision System FH/FZ5 series Hardware Setup Manual (Z366).

Lite Controllers (4-camera type)

	LED name	Description
[1]	PWR LED	Lit while power is ON.
[2]	ERROR LED	Lit when an error has occurred.
[3]	RUN LED	Lit while the layout turned on output setting is displayed.
[4]	ACCESS LED	Blinks while the internal nonvolatile memory is accessed.
[5]	SD PWR LED	Lit while power is supplied to the SD memory card and the card is usable.
[6]	SD BUSY LED	Lit when access to the SD memory card.
[7]	Ethernet NET RUN LED	Lit while Ethernet communications are usable.
[8]	Ethernet LINK/ACT LED	Blinks when connected with an Ethernet device, and blinks while performing communications.

	Connector name	Description
A	SD memory card installation connector	Install the SD memory card. Do not plug or unplug the SD memory card during measurement operation. Otherwise measurement time may be affected or data may be destroyed.
B	USB 2.0 connector	Connects to USB 2.0. Do not insert or remove during loading or writing of measurement or data. The measurement time can be longer or data can be damaged.
C	USB 3.0 connector	Connects to USB 3.0. Do not insert or remove during loading or writing of measurement or data. The measurement time can be longer or data can be damaged. USB 3.0 has a high ability to supply the bus power. Use the Sensor Controller by combining USB 3.0, faster transport can be realized.
D	Ethernet connector	Connect an Ethernet device. Ethernet port, EtherNet/IP port, and PROFINET port are sharing use.
E	RS-232C connector	Connect an external device such as a programmable controller.
F	DVI-I connector	Connect a monitor.
G	Parallel connector (control lines, data lines)	Connect the controller to external devices such as a sync sensor.
H	Camera connector	Connect a camera.
I	Power supply terminal connector	Connect a DC power supply. Wire the controller independently on other devices. Wire * the ground line. Be sure to ground the FH Sensor Controller alone.

* Use the attachment power terminal connector (male) of FH-XCN-L series.
For details, refer to 5-3 Sensor Controller Installation on Vision System FH/FZ5 series Hardware Setup Manual(Z366).

Processing Items

Group	Icon	Processing Item		Corresponding Page in the Catalog
Measurement		Search	Used to identify the shapes and calculate the position of measurement objects.	P16
		Flexible Search	Recognizing the shapes of workpieces with variation and detecting their positions.	P16
		Sensitive Search	Search a small difference by dividing the search model in detail, and calculating the correlation.	P16
		ECM Search	Used to search the similar part of model form input image. Detect the evaluation value and position.	
		EC Circle Search	Extract circles using "round " shape information and get position, radius and quantity in high preciseness.	
		Shape Search Ⅱ	Used to search the similar part of model from input image regardless of environmental changes. Detect the evaluation value and position.	P16
		Shape Search Ⅲ	Robust detection of positions is possible at high-speed and with high precision incorporating environmental fluctuations, such as differences in individual shapes of the workpieces, pose fluctuations, noise superimposition and shielding.	P16
		EC Corner	This processing item measures a corner position (corner) of a workpiece.	
		Ec Cross	The center position of a crosshair shape is measured using the lines created by the edge information on each side of the crosshair.	
		Classification	Used when various kinds of products on the assembly line need to be sorted and identified.	P16
		Edge Position	Measure position of measurement objects according to the color change in measurement area.	P16
		Edge Pitch	Detect edges by color change in measurement area. Used for calculating number of pins of IC and connectors.	P16
		Scan Edge Position	Measure peak/bottom edge position of workpieces according to the color change in separated measurement area.	P16
		Scan Edge Width	Measure max/min/average width of workpieces according to the color change in separated measurement area.	P16
		Circular Scan Edge Position	Measure center axis, diameter and radius of circular workpieces.	P16
		Circular Scan Edge Width	Measure center axis, width and thickness of ring workpieces.	P16
		Intersection	Calculate approximate lines from the edge information on two sides of a square workpiece to measure the angle formed at the intersection of the two lines.	P16
		Color Data	Used for detecting presence and mixed varieties of products by using color average and deviation.	
		Gravity and Area	Used to measure area, center of gravity of workpices by extracting the color to be measured.	
		Labeling	Used to measure number, area and gravity of workpieces by extracting registered color.	
		Label Data	Selecting one region of extracted Labeling, and get that measurement. Area and Gravity position can be got and judged.	
		Defect	Used for appearance measurement of plain-color measurement objects such as defects, stains and burrs.	P16
		Precise Defect	Check the defect on the object. Parameters for extraction defect can be set precisely.	P16
		Fine Matching	Difference can be detected by overlapping and comparing (matching) registered fine images with input images.	P16
		Character Inspect	Recognize character according correlation search with model image registered in [Model Dictionary].	P17
		Date Verification	Reading character string is verified with internal date.	P17
		Model Dictionary	Register character pattern as dictionary. The pattern is used in [Character Inspection].	
		2DCode II *1	Recognize 2D code and display where the code quality is poor.	P17
		2DCode *2	Recognize 2D code and display where the code quality is poor.	P17
		Barcode *3	Recognize barcode, verify and output decoded characters.	P17
		OCR	Recognize and read characters in images as character information.	P17
		OCR User Dictionary	Register dictionary data to use for OCR.	P17
		Circle Angle	Used for calculating angle of inclination of circular measurement objects.	
		Glue Bead Inspection	You can inspect coating of a specified color for gaps or runoffs along the coating path.	P17

Group	Icon	Processing Item		Corresponding Page in the Catalog
Input Image		Camera Image Input FH	To input images from cameras. And set up the conditions to input images from cameras. (For FH Sensor Controllers only)	
		Camera Image Input HDR	Create high-dynamic range images by acquiring several images with different conditions.	
		Camera Image Input HDRLite	HDR function for FZ-SQ□ Intelligent Compact Cameras.	
		Photometric Stereo Image Input	Capture images under different illumination directions using a photometric stereo light.	
		Camera Switch	To switch the cameras used for measurement. Not input images from cameras again.	
		Measurement Image Switching	To switch the images used for measurement. Not input images from camera again.	
		Multi-trigger Imaging	The Multi-trigger Imaging processing item captures multiple images at user-defined timings and executes parallel measurement for each image. Insert the Multi-trigger Imaging to the top of the flow.	
		Multi-trigger Imaging Task	The Multi-trigger Imaging processing item captures multiple images at user-defined timings and executes parallel measurement for each image. Insert this processing item to the top of the processing which requires imaging for multiple times.	
Compensate image		Position Compensation	Used when positions are differed. Correct measurement is performed by correcting position of input images.	P18
		Filtering	Used for processing images input from cameras in order to make them easier to be measured.	P18
		Backgrond Suppression	To enhance contrast of images by extracting color in specified brightness.	P18
		Brightness Correct Filter	Track brightness change of entire screen and remove gradual brightness change such as uneven brightness.	P18
		Color Gray Filter	Color image is converted into monochrome images to emphasize specific color.	P18
		Extract Color Filter	Convert color image to color extracted image or binary image.	P18
		Anti Color Shading	To remove the irregular color/pattern by uniformizing max.2 specified colors.	P18
		Stripes Removal Filter Ⅱ	Remove the background pattern of vertical, horizontal and diagonal stripes.	P19
		Polar Transformation	Rectify the image by polar transformation. Useful for OCR or pattern inspection printed on circle.	P18
		Trapezoidal Correction	Rectify the trapezoidal deformed image.	P18
		Machine Simulator	How the alignment marks would move on the image when each stage or robot axis is controlled can be checked.	
		Image Subtraction	The registered model image and measurement image are compared and only the different pixels are extracted and converted to an image.	
		Advanced filter	Process the images acquired from cameras in order to make them easier to measure. This processing item consolidates existing image conversion filtering into one processing item and adds extra functions.	P18
		Panorama	Combine multiple image to create one big image.	P18
Support measurement		Unit Macro	Advanced arithmetic processing can be easily incorporated into workflow as Unit Macro processing items.	P20
		Unit Calculation Macro	This function is convenient when the user wants to calculate a value using an original calculation formula or change the set value or system data of a processing item.	P20
		Calculation	Used when using the judge results and measured values of ProcItem which are registered in processing units.	
		Line Regression	Used for calculating regression line from plural measurement coodinate.	
		Circle Regression	Used for calculating regression circle from plural measurement coordinate.	
		Precise Calibration	Used for calibration corresponding to trapezoidal distortion and lens distortion.	P15
		User Data	Used for setting of the data that can be used as common constants and variables in scene group data.	P21
		Set Unit Data	Used to change the ProcItem data (setting parameters,etc.) that has been set up in a scene.	
		Get Unit Data	Used to get one data (measured results, setting parameters,etc.) of ProcItem that has been set up in a scene.	
		Set Unit Figure	Used for re-setting the figure data (model, measurement area) registered in an unit.	
		Get Unit Figure	Used for get the figure data (model, measurement area) registered in an unit.	
		Trend Monitor	Used for displaying the information about results on the monitor, facilitating to avoid NG and analyze causes.	P21

Group	Icon	Processing Item		Corresponding Page in the Catalog
Support measurement		Image Logging	Used for saving the measurement images to the memory and USB memory.	
		Image Conversion Logging	Used for saving the measurement images in JPEG and BMP format.	
		Data Logging	Used for saving the measurement data to the memory and USB memory.	
		Elapsed Time	Used for calculating the elapsed time since the measurement trigger input.	
		Wait	Processing is stopped only at the set time. The standby time is set by the unit of [ms].	
		Focus	Focus setting is supported.	P15
		Iris	Focus and aperture setting is supported.	P15
		Parallelize	A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed at the top of processing to be performed in parallel.	
		Parallelize Task	A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed immediately before processing to be performed in parallel between Parallelize and Parallelize End.	
		Statistics	Used when you need to calculate an average of multiple measurement results.	
		Referrence Calib Data	Calibration data and distortion compensation data held under other processing items can be referenced.	
		Position Data Calculation	The specified position angle is calculated from the measured positions.	P14
		Stage Data	Sets and stores data related to stages.	
		Robot Data	Sets and stores data related to robots.	
		Vision Master Calibration	This processing item automatically calculates the entire axis movement amount of the control equipment necessary for calibration.	P15
		PLC Mastoer Calibration	Calibration data is created using a communication command from PLC.	P15
		Convert Position Data	The position angle after the specified axis movement is calculated.	P14
		Movement Single Position	The axis movement that is required to match the measured position angle to the reference position angle is calculated.	P14
		Movement Multi Points	The axis movements that are required to match the measured position angles to the corresponding reference position angles are calculated.	P14
		Detection Point	Obtains position/angle information by referring to the coordinate values measured with the Measurement Processing Unit.	
		Manual Position Setting	Used to change the measurement coordinates X and Y of the measurement processing unit.	
		Camera Calibration	By setting the camera calibration, the measurement result can be converted and output as actual dimensions.	P15
		Data Save	The set data can be saved in the controller main unit or as scene data. The data is held even after the FH/FZ power is turned off.	
		Conveyor Calibration	Conveyor Calibration is used to calibrate camera, conveyor, and robots for conveyor tracking application.	
		Scene	The specified scene is copied to the current scene.	
		System Information	Obtain system information (e.g., memory and disk space and I/O input signal status) of the Sensor Controller.	

Group	Icon	Processing Item		Corresponding Page in the Catalog
Branch		Conditional Branch	Used where more than two kinds of products on the production line need to detected separately.	
		End	This ProcItem must be set up as the last processing unit of a branch.	
		DI Branch	Same as ProcItem "Branch". But you can change the targets of conditional branching via external inputs.	
		Control Flow Normal	Set the measurement flow processing into the wait state in which the specific no-protocol command can be executed.	
		Control Flow PLC Link	Set the measurement flow processing into the wait state in which the specific PLC Link command can be executed.	
		Control Flow Parallel	Set the measurement flow processing into the wait state in which the specific parallel command can be executed.	
		Control Flow Fieldbus	Set the measurement flow processing into the wait state in which the specific Fieldbus command can be executed.	
		Selective Branch	Easily branch to multiple destinations.	
		Conditional Execution (If)	The measurement flow is divided according to the comparison result obtained using the set expressions and conditions.	
		Conditional Execution (Else)	Insert between the Conditional Execution (If) processing item and End If processing item. The measurement flow is divided according to the comparison result obtained using the set expressions and conditions.	
		Loop	The set processes are repeated until the loop count reaches the specified number, and then the next process starts.	
		Loop Suspension	Insert between the Loop processing item and End Loop processing item. Used to stop the loop before the loop count reaches the specified number.	
		Select Execution (Select)	Used to set conditions. The measurement flow is divided according to the comparison result obtained using the conditions given by expressions.	
		Select Execution (Case)	Used to make a judgment. The measurement flow is divided according to the comparison result obtained using the conditions given by expressions.	
Output result		Result Output (I/O)	Output data to the external devices such as a programmable controller or a PC via PLC Link, Parallel interface, Fieldbus interface (EtherCAT, EtherNet/IP (other than message communication), PROFINET).	
		Result Output (Message)	Output data to the external devices such as a programmable controller or a PC with non-procedure mode via the serial interface or EtherNet/IP (message communication). This processing item allows you to save the logging data as a ".csv" file into the Sensor Controller as well.	
		Data Output	Used when you need to output data to the external devices such as PLC or PC via serial ports.	
		Parallel Data Output	Used when you need to output data to the external devices such as PLC or PC via parallel ports.	
		Parallel Judgement Output	Used when you need to output judgement results to the external devices such as PLC or PC via parallel ports.	
		Fieldbus Data Output	Outputs data to an external device, such as a Programmable Controller, through a fieldbus interface.	
Display result		Result Display	Used for displaying the texts or the figures in the camera image.	
		Display Image File	Display selected image file.	
		Display Last NG Image	Display the last NG images.	
		Conveyor Panorama Display	Display images of the tracking area as a panoramic image.	
		Display Image Hold	Processing item to retain images, including measurement results.	

*1 2D Codes that can be read : Data Matrix (ECC200)
*2 2D Codes that can be read : Data Matrix (ECC200), QR Code
*3 Bar Codes that can be read : JAN/EAN/UPC (including add-on codes), Code 39, Codabar (NW-7), ITF (Interleaved 2 of 5), Code 93, Code 128, GS1-128, GS1 DataBar (RSS-14 / RSS Limited / RSS Expanded), Pharmacode

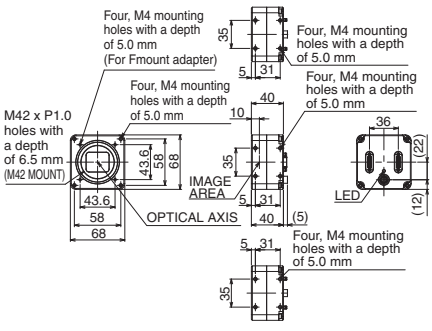
12 million-pixel camera

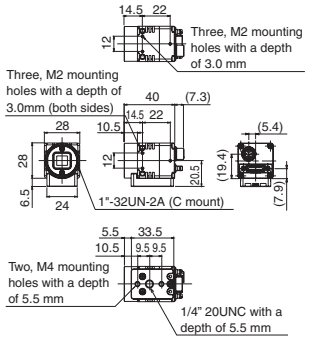
FH-SC12
FH-SM12



Digital CCD/CMOS Cameras

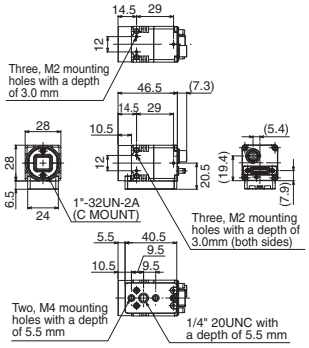
300,000-pixel camera

FZ-S
FZ-SC



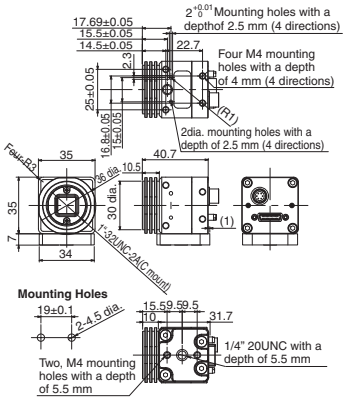
2 million-pixel camera

FZ-S2M
FZ-SC2M



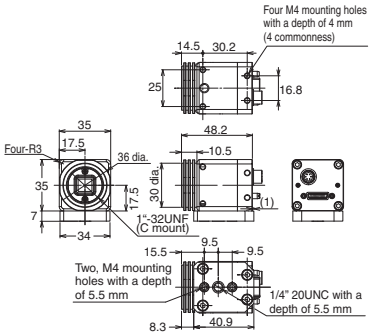
5 million-pixel camera

FZ-S5M2



High-speed CCD Camera

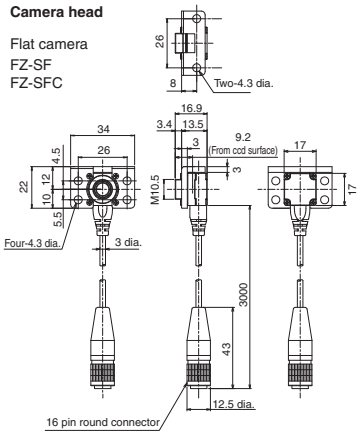
FZ-SH
FZ-SHC



Small digital CCD cameras

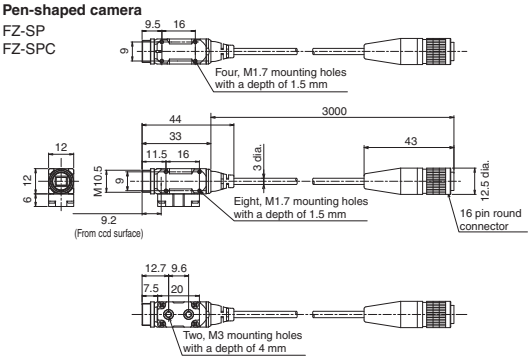
Camera head

Flat camera
FZ-SF
FZ-SFC



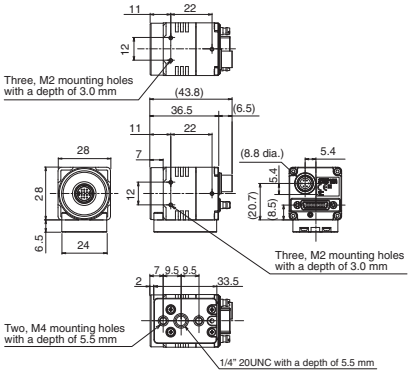
Pen-shaped camera

FZ-SP
FZ-SPC



Camera amplifier

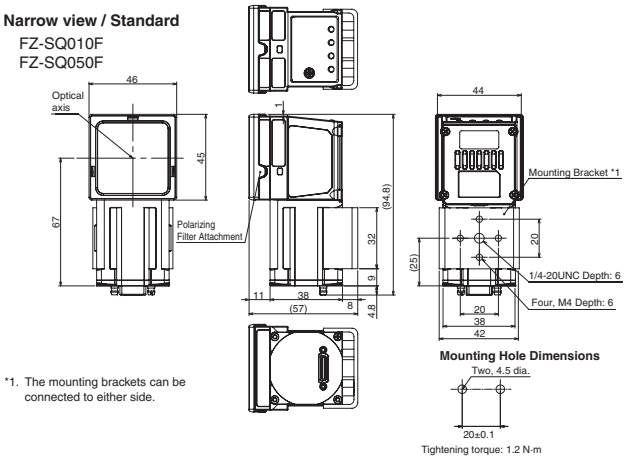
Can be used for both flat cameras and pen-shaped cameras



Intelligent Compact Digital CMOS Cameras

Narrow view / Standard

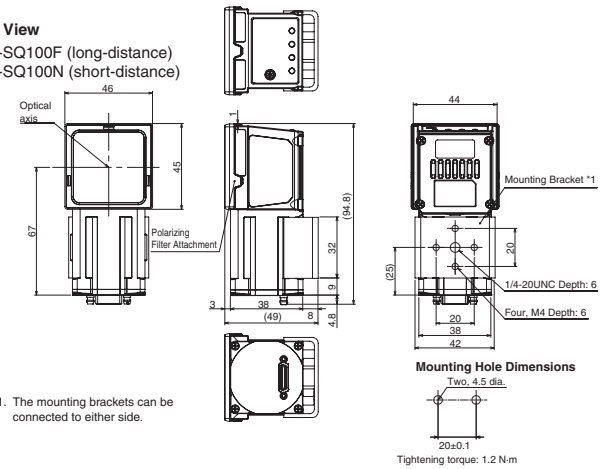
FZ-SQ010F
FZ-SQ050F



*1. The mounting brackets can be connected to either side.

Wide View

FZ-SQ100F (long-distance)
FZ-SQ100N (short-distance)



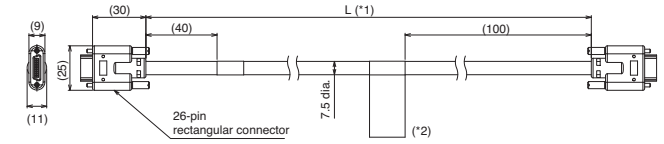
*1. The mounting brackets can be connected to either side.

Cables

Camera Cable

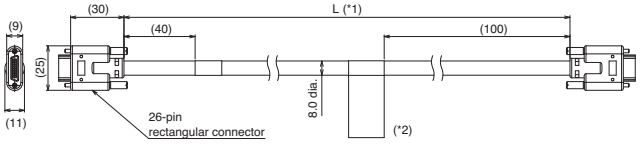
Camera Cable

FZ-VS3



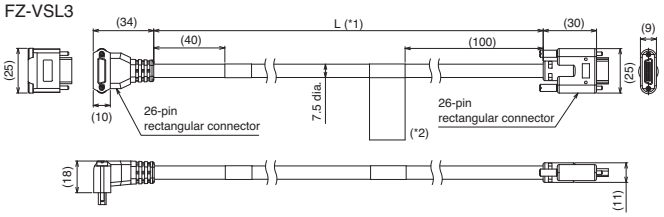
Bend resistant Camera Cable

FZ-VSB3



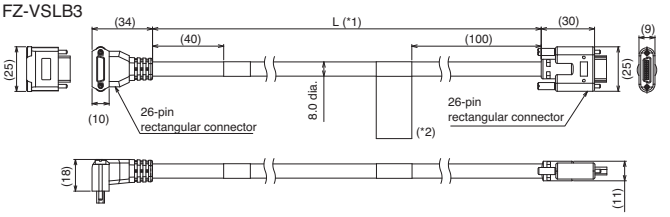
Right-angle Camera Cable

FZ-VSL3



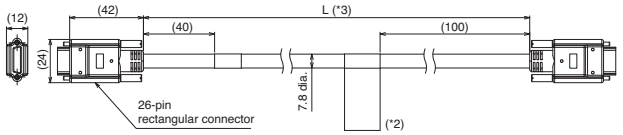
Bend resistant Right-angle Camera Cable

FZ-VSLB3



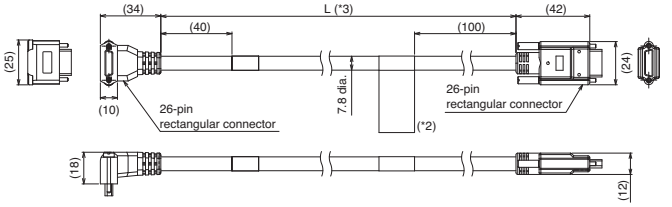
Long-distance Camera Cable

FZ-VS4



Long-distance Right-angle Camera Cable

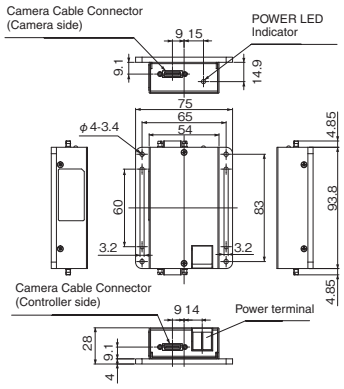
FZ-VSL4



*1. Cable is available in 2m/3m/5m/10m.
*2. Each camera cables has polarity.
Please ensure that the name plate side of the cable is connected to the controller.
*3. Cable is available in 15m.

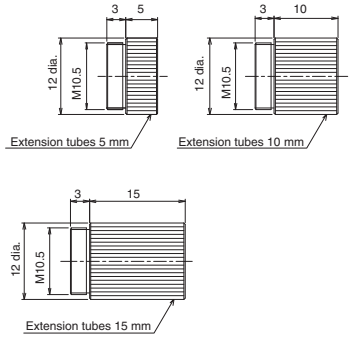
Camera Cable Extension Unit

FZ-VSJ



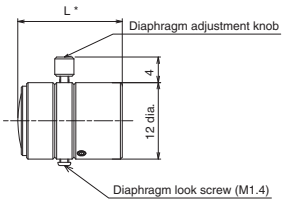
Extension Tubes for Small Camera

FZ-LESR



Lens for Small Camera

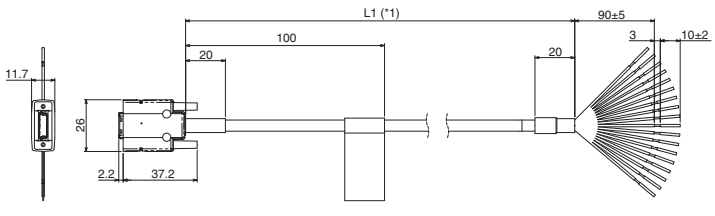
FZ-LES Series



* Overall length is available in 16.4mm/19.7mm/23.1mm/25.5mm.

Encoder Cable

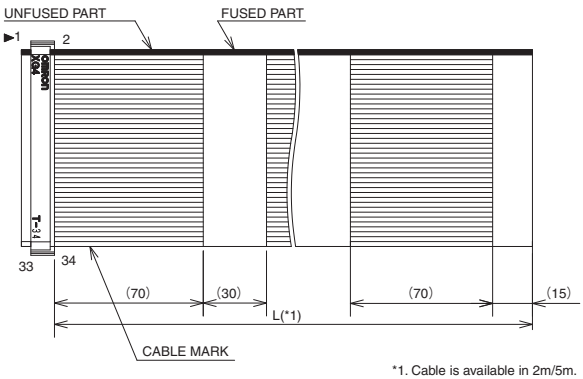
FH-VR



*1. Cable is available in 1.5 m.

Parallel I/O Cable

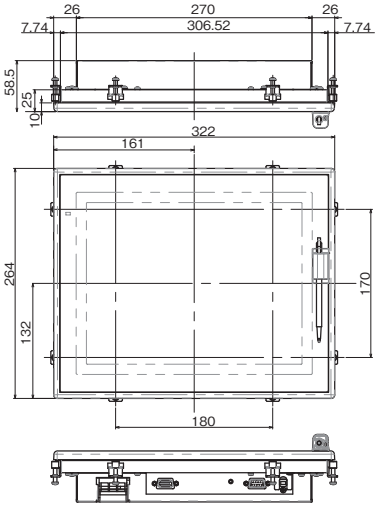
XW2Z-S013-□

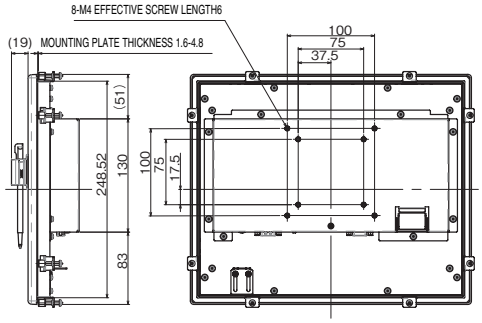


*1. Cable is available in 2m/5m.

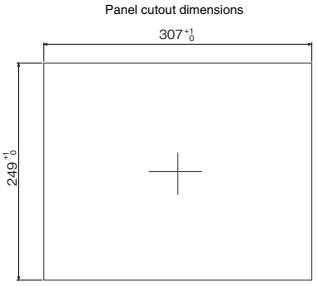
Touch Panel Monitor

FH-MT12





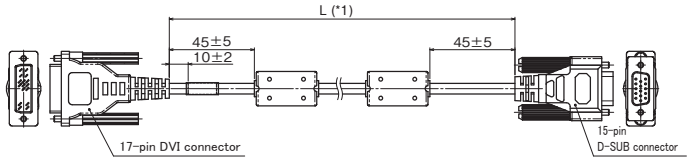
Panel cutout dimensions



Note:1. Panel thickness : 1.6 to 4.8 mm
2. No burr allowed

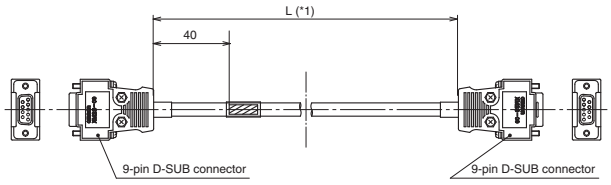
DVI-Analog Conversion Cable for Touch Panel Monitor

FH-VMDA



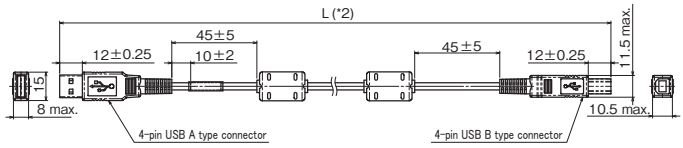
RS-232C Cable for Touch Panel Monitor

XW2Z-□□□PP-1



USB Cable for Touch Panel Monitor

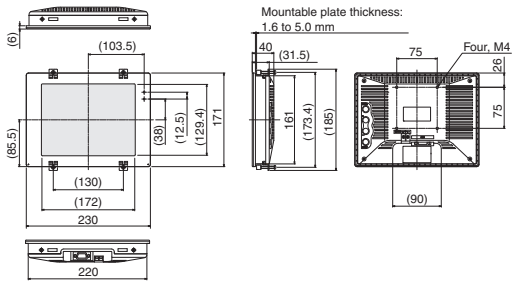
FH-VUAB



*1. Cable is available in 2m/5m/10m.
*2. Cable is available in 2m/5m.

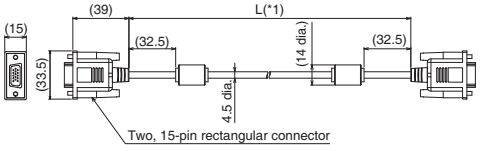
LCD Monitor

FZ-M08



LCD Monitor Cable

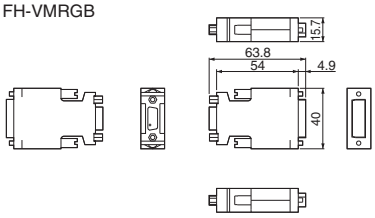
FZ-VM



*1. Cable is available in 2m/5m.

DVI-I -RGB Conversion Connector

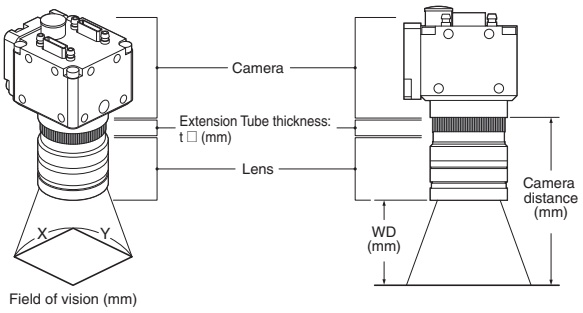
FH-VMRGB



Optical Chart

Meaning of Optical Chart

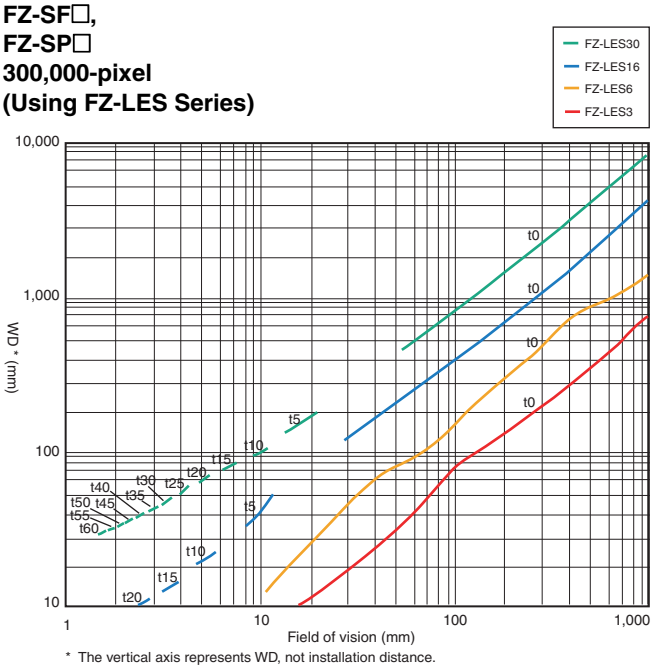
The X axis of the optical chart shows the field of vision (mm) (*1), and the Y axis of the optical chart shows the camera installation distance (mm) (*2).



*1. The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
*2. The vertical axis represents WD for small cameras.

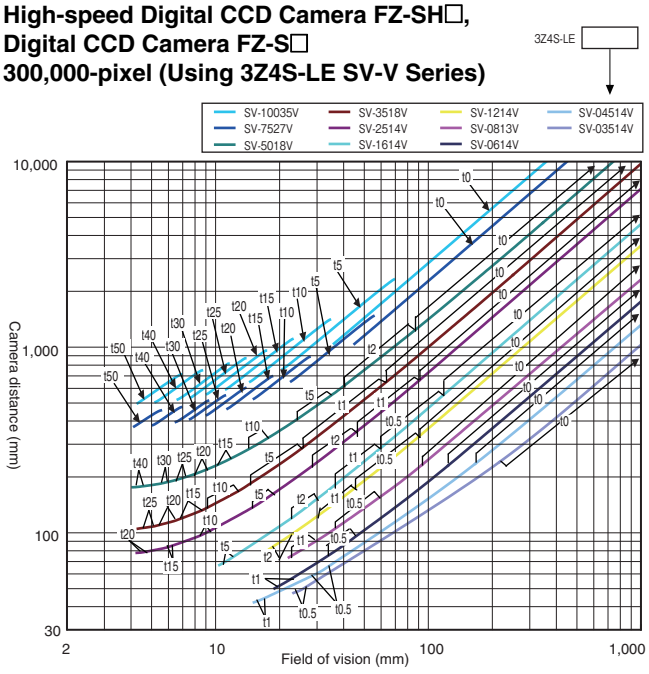
Standard Lenses

Small Digital CCD Cameras FZ-SF□, FZ-SP□ 300,000-pixel (Using FZ-LES Series)

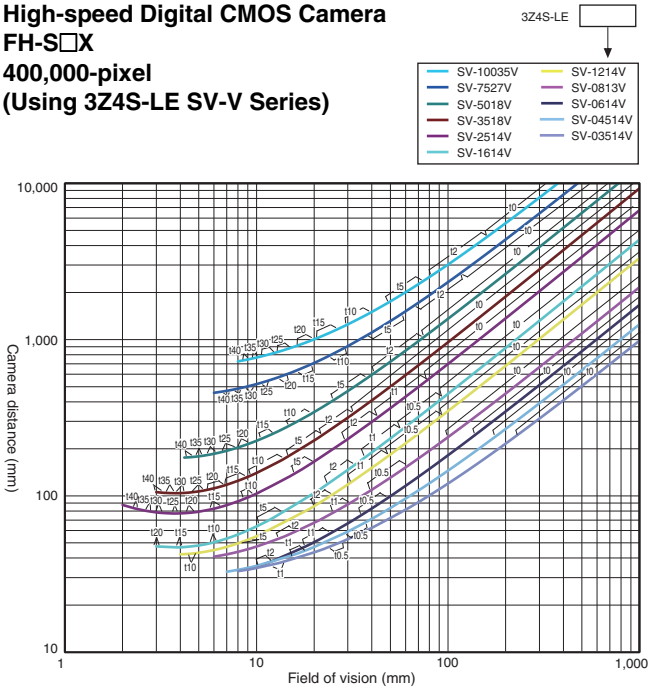


* The vertical axis represents WD, not installation distance.

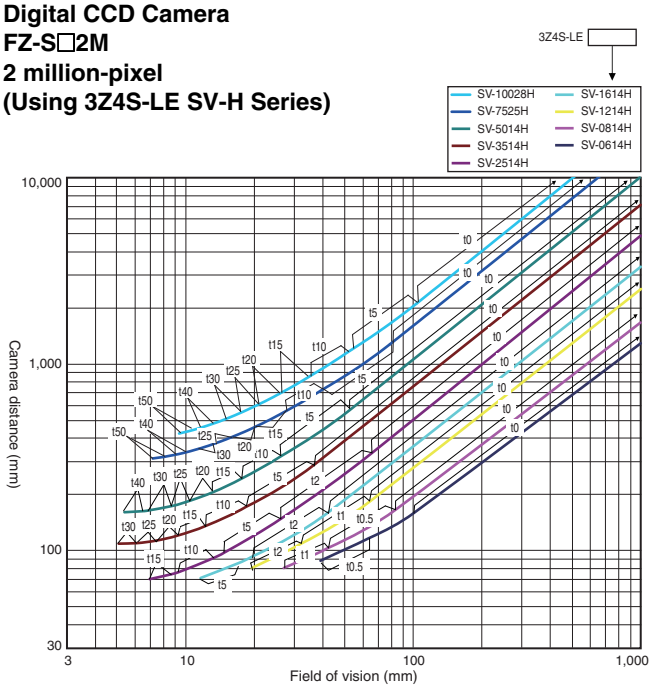
High-speed Digital CMOS Camera FH-S□, High-speed Digital CCD Camera FZ-SH□, Digital CCD Camera FZ-S□ 300,000-pixel (Using 3Z4S-LE SV-V Series)



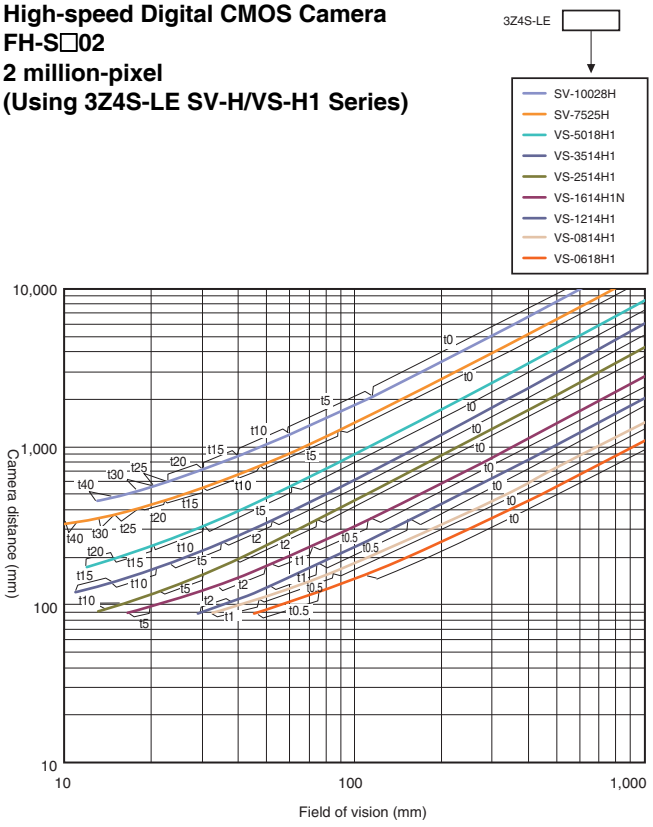
High-speed Digital CMOS Camera FH-S□X 400,000-pixel (Using 3Z4S-LE SV-V Series)



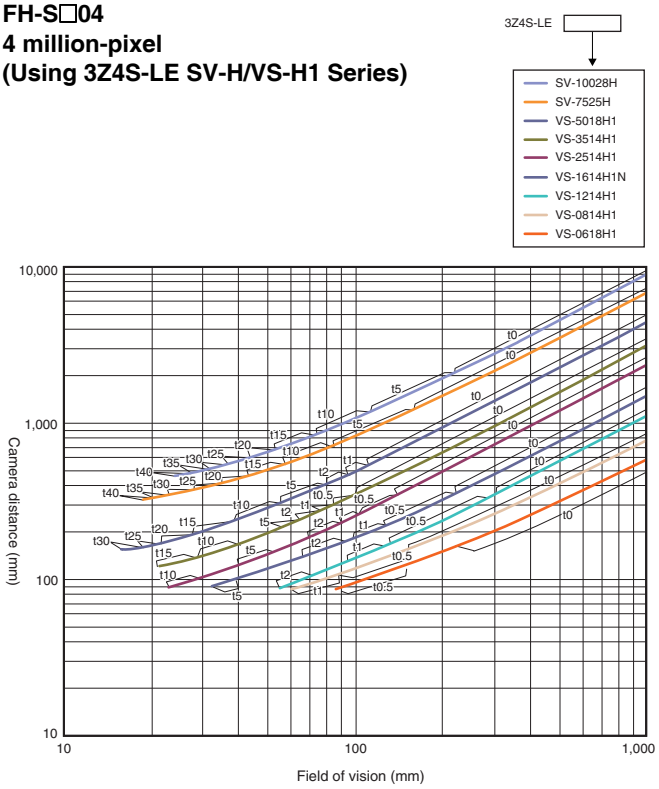
Digital CCD Camera FZ-S□2M 2 million-pixel (Using 3Z4S-LE SV-H Series)



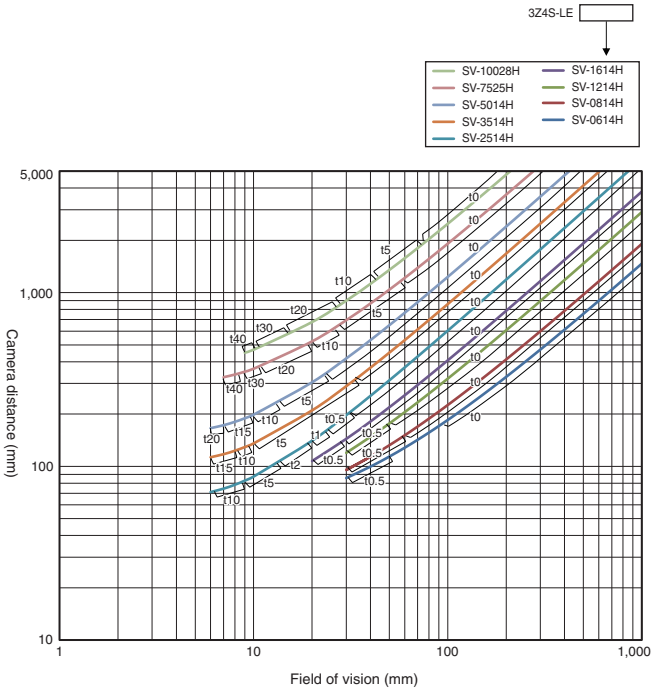
High-speed Digital CMOS Camera FH-S□02 2 million-pixel (Using 3Z4S-LE SV-H/VS-H1 Series)



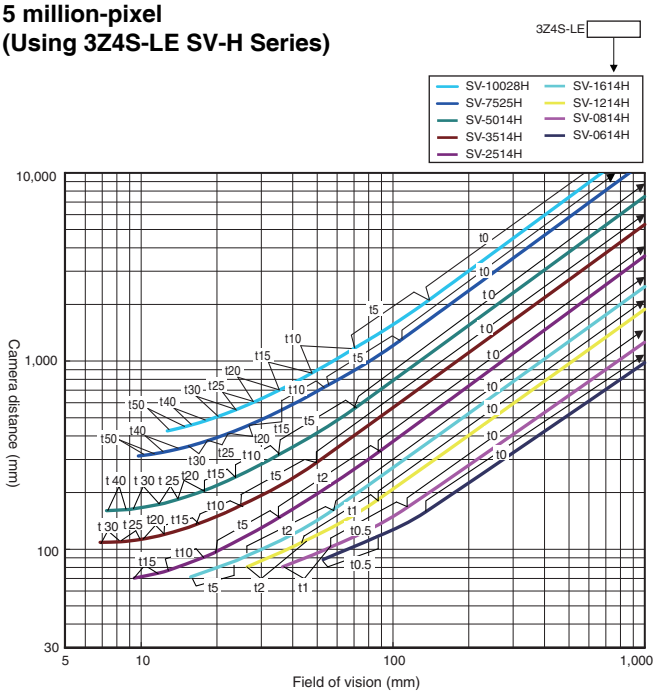
High-speed Digital CMOS Camera FH-S□04 4 million-pixel (Using 3Z4S-LE SV-H/VS-H1 Series)



Digital CMOS Camera FH-S□05R 5 million-pixel (Using 3Z4S-LE SV-H Series)

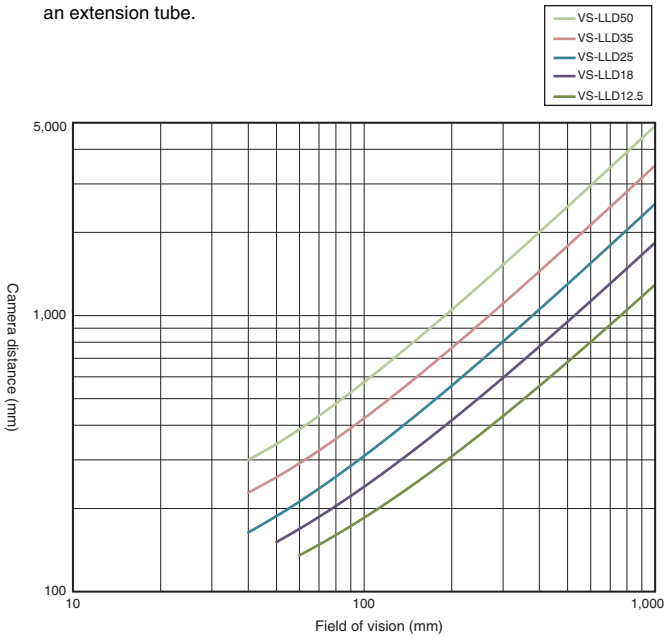


Digital CMOS Camera FZ-S□5M3, Digital CCD Camera FZ-S5M2, High-speed Digital CMOS Camera FH-S□X05 5 million-pixel (Using 3Z4S-LE SV-H Series)

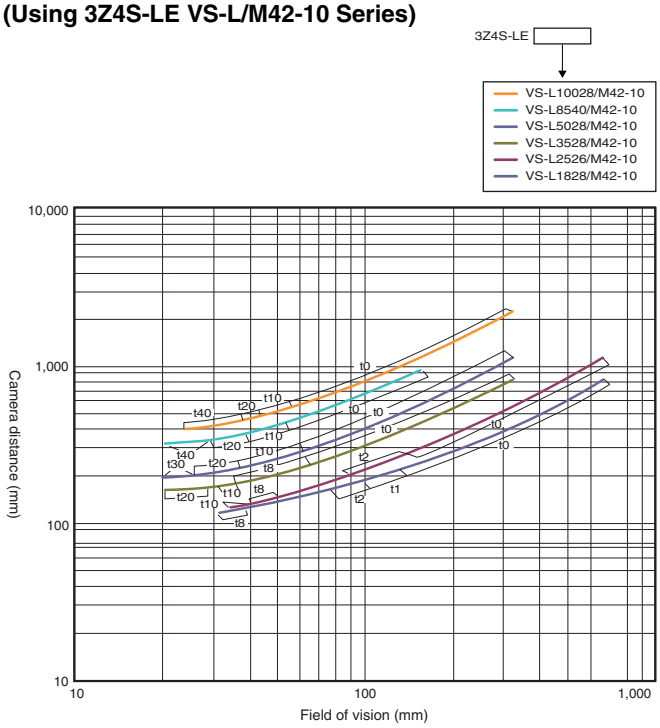


High-speed Digital CMOS Camera
FH-S□X12
12 million-pixel
(Using 3Z4S-LE VS-LLD Series)

Note:The 3Z4S-LE VS-LDD Series cannot be used with an extension tube.

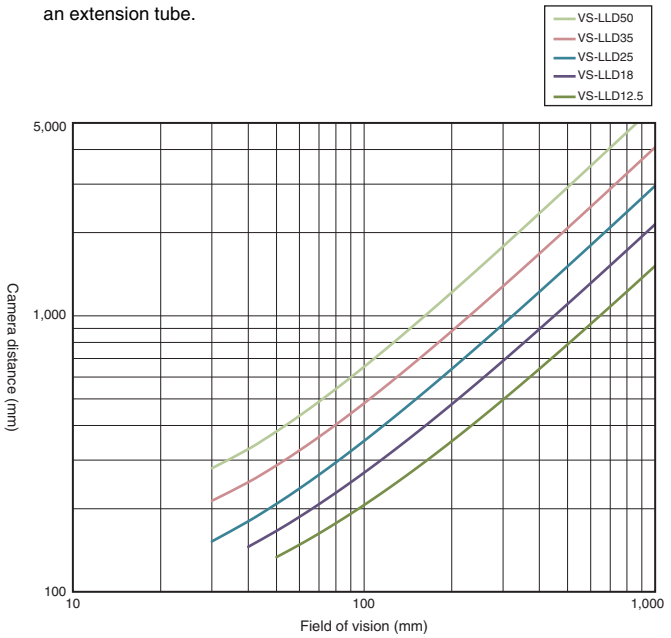


High-speed Digital CMOS Camera
FH-S□12
12 million-pixel
(Using 3Z4S-LE VS-L/M42-10 Series)



Digital CMOS Camera
FH-S□21R
20.4 million-pixel
(Using 3Z4S-LE VS-LLD Series)

Note:The 3Z4S-LE VS-LDD Series cannot be used with an extension tube.



Vibrations and Shocks Resistant Lenses/Telecentric Lenses

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

* "Industry's highest" described on the front cover is based on Omron investigation in June 2018.

Note: Do not use this document to operate the Unit.
