74LVC125A

Low-Voltage CMOS Quad Buffer

With 5 V−Tolerant Inputs and Outputs (3−State, Non−Inverting)

The 74LVC125A is a high performance, non−inverting quad buffer operating from a 1.2 to 3.6 V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers while TTL compatible outputs offer improved switching noise performance. A V_I specification of 5.5 V allows 74LVC125A inputs to be safely driven from 5.0 V devices. The 74LVC125A is suitable for memory address driving and all TTL level bus oriented transceiver applications.

Current drive capability is 24 mA at the outputs. The Output Enable ($\overline{OE}$n) inputs, when HIGH, disable the outputs by placing them in a HIGH Z condition.
