Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to Fairchild <a href="guestions@onsemi.com">guestions@onsemi.com</a>.

## 74VHC138 3-to-8 Decoder/Demultiplexer

## **General Description**

The VHC138 is an advanced high speed CMOS 3-to-8 decoder/demultiplexer fabricated with silicon gate CMOS technology. It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

When the device is enabled, 3 binary select inputs  $(A_0, A_1 \text{ and } A_2)$  determine which one of the outputs  $(\overline{O}_0 - \overline{O}_7)$  will go LOW. When enable input  $E_3$  is held LOW or either  $\overline{E}_1$  or  $\overline{E}_2$  is held HIGH, decoding function is inhibited and all outputs go HIGH.  $E_3$ ,  $\overline{E}_1$  and  $\overline{E}_2$  inputs are provided to ease cascade connection and for use as an address decoder for memory systems. An input protection circuit ensures that

0V to 7V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3V systems and two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

#### **Features**

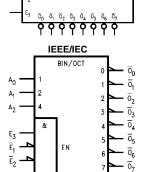

- $\blacksquare$  High Speed:  $t_{PD}=5.7ns$  (typ) at  $T_A=25^{\circ}C$
- Low power dissipation:  $I_{CC} = 4 \mu A \text{ (max.)}$  at  $T_A = 25^{\circ}C$
- High noise immunity:  $V_{NIH} = V_{NIL} = 28\% V_{CC}$  (min.)
- Power down protection provided on all inputs
- Pin and function compatible with 74HC138

Note 1: Absolute Maximum Ratings are values beyond which the device may be damaged or have its useful life impaired. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation outside databook specifications.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.
