ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FMS6346
Six Channel, 6th-Order SD/HD Video Filter Driver

Features

- Three selectable sixth-order 8/32MHz (SD/HD) filters
- Three fixed sixth-order 8MHz (SD) filters
- Transparent input clamping
- Single video load drive (2V$_{PP}$, 150Ω, A$_V$ = 6dB)
- AC- or DC-coupled inputs
- AC- or DC-coupled outputs
- DC-coupled outputs eliminate AC-coupling capacitors
- Low power
- 5V only
- Robust (12kV HBM) output ESD protection
- Lead-free package - TSSOP-20

Applications

- Cable and satellite set-top boxes
- DVD players
- HDTV
- Personal Video Recorders (PVR)
- Video On Demand (VOD)

Description

The FMS6346 Low Cost Video Filter (LCVF) is intended to replace passive LC filters and drivers with a low-cost integrated device. Six sixth-order Butterworth filters provide improved image quality compared to typical passive solutions. The combination of low-power Standard-Definition (SD) and High-Definition (HD) filters greatly simplify DVD video output circuitry. Three channels offer fixed SD filters, while the other three are selectable between SD and HD filters.

The FMS6346 offers a fixed gain of 6dB. The FMS6346 may be directly driven by a DC-coupled DAC output or an AC-coupled signal. Internal diode clamps and bias circuitry may be used if AC-coupled inputs are required (*see Applications section for details*).

The outputs can drive AC- or DC-coupled single (150Ω) video loads. DC-coupling the outputs removes the need for output coupling capacitors. The input DC levels are offset approximately +280mV at the output.

**Figure 1. Block Diagram**

FMS6346 — Six Channel, 6th-Order SD/HD Video Filter Driver

Pin Configuration

Figure 2. Pin Configuration

Pin Assignments

Pin#	Pin	Type	Description
1	SD IN1	Input	SD video input, channel 1
2	SD IN2	Input	SD video input, channel 2
3	SD IN3	Input	SD video input, channel 3
4	N/C	Input	No Connection
5	VCC	Input	+5V supply
6	FcSEL	Input	Selects filter corner frequency for pins 7, 8, and 9: "0" = SD, "1" = PS
7	SD/HD IN1	Input	Selectable SD or PS video input, channel 1
8	SD/HD IN2	Input	Selectable SD or PS video input, channel 2
9	SD/HD IN3	Input	Selectable SD or PS video input, channel 3
10	N/C	Input	No Connection
11	N/C	Input	No Connection
12	SD/HD	Out-	Filtered SD or PS video output, channel 3
13	SD/HD	Out-	Filtered SD or PS video output, channel 2
14	SD/HD	Out-	Filtered SD or PS video output, channel 1
15	N/C	Input	No Connection
16	GND	Input	Must be tied to ground
17	GND	Input	Must be tied to ground
18	SD OUT3	Out-	Filtered SD video output, channel 3
19	SD OUT2	Out-	Filtered SD video output, channel 2
20	SD OUT1	Out-	Filtered SD video output, channel 1

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
V_{CC}	DC Supply Voltage	-0.3	6	V
V_{IO}	Analog and Digital I/O	-0.3	V_{CC} + 0.3	V
I_{OUT}	Output Current, Any One Channel (Do Not Exceed)		50	mA

Reliability Information

Electrostatic Discharge Information

Symbols	Parameter	Max.	Unit
ESD	Human Body Model, JESD22-A114	12	kV
	Charged Device Model, JESD22-C101	2	

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

Symbol	Parameter	Min.	Typ.	Max.	Unit
T_A	Operating Temperature Range	0		70	°C
V_{CC}	Supply Voltage Range	4.75	5.00	5.25	V

DC Electrical Characteristics

T_A = 25°C, V_{cc} = 5V, R_{source} = 37.5Ω, inputs AC coupled with 0.1μF, all outputs AC coupled with 220μF into 150Ω loads, referenced to 400kHz; unless otherwise noted.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Units
I_{CC}	Supply Current[1]	No Load		60	80	mA
V_{IN}	Video Input Voltage Range	Referenced to GND, if DC-coupled		1.4		V_{pp}
V_{IL}	Digital Input Low[1]	f_{cSEL}	0		0.8	V
V_{IH}	Digital Input High[1]	f_{cSEL}	2.4		V_{CC}	V

Standard-Definition Electrical Characteristics

T_A = 25°C, V_{in} = 1V_{pp}, V_{cc} = 5V, R_{source} = 37.5Ω, all inputs AC coupled with 0.1μF, all outputs AC coupled with 220μF into 150Ω loads, referenced to 400kHz; unless otherwise noted.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Units
AV_{SD}	Channel Gain[1]	All SD Channels	5.8	6.0	6.2	dB
f_{1dBSD}	-1dB Bandwidth[1]	All SD Channels	5.50	7.15		MHz
f_{cSD}	-3dB Bandwidth[1]	All SD Channels	6.5	8.0		MHz
f_{SBSD}	Attenuation (Stopband Reject)[1]	All SD Channels at f = 27MHz	43	50		dB
DG	Differential Gain	All SD Channels		0.7		%
DP	Differential Phase	All SD Channels		1.0		°
THD	Output Distortion	V_{OUT} = 1.4V_{pp}, 3.58MHz		0.35		%
X_{TALKSD}	Crosstalk (ch-to-ch)	at 1MHz		-54		dB
SNR	Signal-to-Noise Ratio[2]	NTC-7 weighting, 100kHz to 4.2MHz		72		dB
t_{pdSD}	Propagation Delay	Delay from input to output, 4.5MHz		90		ns

High-Definition Electrical Characteristics

T_A = 25°C, V_{IN} = 1V_{pp}, V_{cc} = 5V, R_{source} = 37.5Ω, F_{cSEL} = 1, all inputs AC coupled with 0.1μF, all outputs AC coupled with 220μF into 150Ω loads, referenced to 400kHz; unless otherwise noted.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Units
AV_{HD}	Channel Gain[1]	All HD Channels	5.8	6.0	6.2	dB
f_{1dBSHD}	-1dB Bandwidth[1]	All HD Channels	28	31		MHz
f_{cHD}	-3dB Bandwidth[1]	All HD Channels	30	34		MHz
f_{SBHD}	Attenuation (Stopband Reject)[1]	All HD Channels at f = 74.25MHz	30	41		dB
THD	Output Distortion (All HD Channels)	V_{OUT} = 1.4V_{pp}, 22MHz		0.9		%
X_{TALKHD}	Crosstalk (ch-to-ch)	at 1MHz		-54		dB
SNR	Signal-to-Noise Ratio[2]	Unweighted; 100kHz to 30MHz		60		dB
t_{pdHD}	Propagation Delay	Delay from input to output		25		ns

Notes:

1. 100% tested at 25°C.
2. SNR = 20 * log (714mV/rms noise).

Typical Performance Characteristics

$T_A = 25°C$, $V_{IN} = 1V_{pp}$, $V_{CC} = 5V$, $R_{source} = 37.5\Omega$, inputs AC coupled with 0.1µF, all outputs AC coupled with 220µF into 150Ω loads; unless otherwise noted.

Applications Information

Functional Description

The FMS6346 Low-Cost Video Filter (LCVF) provides 6dB gain from input to output. In addition, the input is slightly offset to optimize the output driver performance. The offset is held to the minimum required value to decrease the standing DC current into the load. Typical voltage levels are shown in Figure 11.

0.58V V_{OUT}

Driven by:
AC-Coupled and Biased
U, V, Pb, Pr, C

Figure 11. Typical Voltage Levels

The FMS6346 provides an internal diode clamp to support AC-coupled input signals. If the input signal does not go below ground, the input clamp does not operate. This allows DAC outputs to directly drive the FMS6346 without an AC coupling capacitor. The worst-case sync tip compression due to the clamp does not exceed 7mV. The input level set by the clamp, combined with the internal DC offset, keeps the output within its acceptable range. When the input is AC-coupled, the diode clamp sets the sync tip (or lowest voltage) just below ground.

For symmetric signals like C, U, V, Cb, Cr, Pb, and Pr; the average DC bias is fairly constant and the inputs can be AC-coupled with the addition of a pull-up resistor to set the DC input voltage. DAC outputs can also drive these same signals without the AC coupling capacitor. A conceptual illustration of the input clamp circuit is shown in Figure 12.

Figure 12. Input Clamp Circuit

I/O Configurations

For DC-coupled DAC drive with DC-coupled outputs, use the configuration shown in Figure 13.

DVD or STB SoC DAC Output   0V - 1.4V   LCVF Clamp Inactive   75Ω
Figure 13. DC-Coupled Inputs and Outputs

If the DAC's average DC output level causes the signal to exceed the range of 0V to 1.4V, it can be AC-coupled as shown in Figure 14.

DVD or STB SoC DAC Output   0.1µF   0V - 1.4V   LCVF Clamp Active   75Ω

Figure 14. AC-Coupled Inputs, DC-Coupled Outputs

When the is driven by an unknown external source or a SCART switch with its own clamping circuitry, the inputs should be AC-coupled as shown in Figure 15.
External video source must be AC coupled   0.1µF   0V - 1.4V   LCVF Clamp Active   75Ω   75Ω

Figure 15. SCART Configuration with DC-Coupled Outputs

The same method can be used for biased signals with the addition of a pull-up resistor to make sure the clamp never operates. The internal pull-down resistance is 800kΩ ±20%, so the external resistance should be 7.5MΩ to set the DC level to 500mV. If a pull-up resistance less than 7.5MΩ is desired, an external pull-down can be added such that the DC input level is set to 500mV.

**Figure 16. Biased SCART with DC-Coupled Outputs**

The same circuits can be used with AC-coupled outputs if desired, as shown in Figure 17.
Figure 17 DC-Coupled Inputs, AC-Coupled Outputs
**Figure 18. AC-Coupled Inputs, AC-Coupled Outputs**

Figure 19. Biased SCART with AC-Coupled Outputs

NOTE: The video tilt or line time distortion is dominated by the AC-coupling capacitor. The value may need to be increased beyond 220µF to obtain satisfactory operation in some applications.

Power Dissipation

The FMS6346 output drive configuration must be considered when calculating overall power dissipation. Care must be taken not to exceed the maximum die junction temperature. The following example can be used to calculate the FMS6346's power dissipation and internal temperature rise:

$$T_J = T_A + P_d \cdot \theta_{JA}$$

where $P_d = P_{CH1} + P_{CH2} + P_{CHx}$

and $P_{CHx} = V_s \cdot I_{CH} - (V_O^2/R_L)$

where

$V_O = 2V_{in} + 0.280V$

$I_{CH} = (I_{CC}/6) + (V_O/R_L)$

V_{IN} = RMS value of input signal

$I_{CC} = 60mA$

$V_s = 5V$

R_L = channel load resistance

Board layout can affect thermal characteristics. Refer to the *Layout Considerations* section for more information.

Layout Considerations

General layout and supply bypassing play major roles in high-frequency performance and thermal characteristics. Fairchild offers a demonstration board, FMS6346DEMO, to guide layout and aid device testing and characterization. The FMS6346DEMO is a four-layer board with a full power and ground plane. Following this layout configuration provides the optimum performance and thermal characteristics. For best results, follow the steps below as a basis for high-frequency layout:

• Include 10µF and 0.1µF ceramic bypass capacitors

• Place the 10µF capacitor within 0.75 inches of the power pin

• Place the 0.1µF capacitor within 0.1 inches of the power pin

• For multi-layer boards, use a large ground plane to help dissipate heat

• For two-layer boards, use a ground plane that extends beyond the device by at least 0.5 inches

• Minimize all trace lengths to reduce series inductances

Output Considerations

The FMS6346 outputs are DC offset from the input by 150mV. Therefore, $V_{OUT} = 2 \cdot V_{IN} DC + 150mV$. This offset is required to obtain optimal performance from the output driver and is held at the minimum value to decrease the standing DC current into the load. Since the FMS6346 has a 2x (6dB) gain, the output is typically connected via a 75Ω-series back-matching resistor, followed by the 75Ω video cable. Due to the inherent divide by two of this configuration, the blanking level at the load of the video signal is always less than 1V. When AC-coupling the output, ensure that the coupling capacitor of choice passes the lowest frequency content in the video signal and that line time distortion (video tilt) is kept as low as possible.

The selection of the coupling capacitor is a function of the subsequent circuit input impedance and the leakage current of the input being driven. To obtain the highest quality output video signal, the series termination resistor must be placed as close to the output pin as possible. This reduces the parasitic capacitance and inductance effect on the output driver. The distance from the device pin to the series termination resistor should be no greater than 0.1 inches.

Figure 21 Distance from Device Pin to Series Termination Resistor

Typical Application Diagram

The following circuit may be used for direct DC-coupled drive by DACs with an output voltage range of 0V to 1.4V. AC-coupled or DC-coupled outputs may be used with AC-coupled outputs offering slightly lower power dissipation.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.

2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
