Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore ( $\_$), the underscore ( $\_$) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild questions@onsemi.com.

High Noise Immunity, 3.3 V / 5 V, 10 Mbit/sec, Logic Gate Optocoupler in Wide-Body SOP 5-Pin

## Features

- Optoplanar ${ }^{\circledR}$ Packaging Technology Allows More Than 10 mm Creepage and Clearance Distance, and 0.5 mm Insulation Distance to Achieve Reliable and High Voltage Insulation
- High Noise Immunity Characterized by Common Mode Transient Immunity (CMTI)
- 20 kV/ $\mu \mathrm{s}$ Minimum CMTI

■ Specifications Guaranteed Over 3 V to 5.5 V Supply Voltage and $-40^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$ Extended Industrial Temperature Range

- High-Speed, 10 Mbit/s Data Rate (NRZ)
- Safety and Regulatory Approvals
- UL1577, 5,000 VAC RMS for 1 Minute
- DIN-EN/IEC60747-5-5, 1,414 V Peak Working Insulation Voltage

## Applications

■ Isolating Intelligent Power Module
■ Isolating Industrial Communication Interface

## Description

The FOD8160 is a $3.3 \mathrm{~V} / 5 \mathrm{~V}$ high-speed logic gate optocoupler with open-collector output, which supports isolated communications to allow digital signals to communicate between systems without conducting ground loops or hazardous voltages. The device utilizes Fairchild's prioprietary Optoplanar ${ }^{\circledR}$ coplanar packaging technology and optimized IC design to achieve highnoise immunity, characterized by high common-mode rejection specifications.
The FOD8160, packaged in a wide-body SOP 5-Pin package, consists of an aluminium gallium arsenide (AIGaAs) LED and an integrated high-speed photodetector. The output of the detector IC is an open collector Schottky-clamped transistor. The electrical and switching characteristics are guaranteed over the extended industrial temperature range of $-40^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$ and a $\mathrm{V}_{\mathrm{CC}}$ range of 3 V to 5.5 V .

## Safety and Insulation Ratings

As per DIN EN/IEC60747-5-5, this optocoupler is suitable for "safe electrical insulation" only within the safety limit data below. Compliance with the safety ratings shall be ensured by means of protective circuits.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ unless otherwise specified.

## Note:

1. No derating required up to $100^{\circ} \mathrm{C}$.

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

## Notes:

5. $t_{P S K}$ is equal to the magnitude of the worst-case difference in $t_{P H L}$ and/or $t_{P L H}$ between any two units from the same manufacturing date code that are operated at same case temperature ( $\pm 5^{\circ} \mathrm{C}$ ), at same operating conditions, with equal loads ( $\left.R_{L}=350 \Omega, C_{L}=15 \mathrm{pF}\right)$, and with an input rise time less than 5 ns .
6. Common-mode transient immunity at output HIGH is the maximum tolerable positive $\mathrm{dVcm} / \mathrm{dt}$ on the leading edge of the common-mode impulse signal, $\mathrm{V}_{\mathrm{CM}}$, to assure that the output remains HIGH . Common-mode transient immunity at output LOW is the maximum tolerable negative $\mathrm{dVcm} / \mathrm{dt}$ on the trailing edge of the common pulse signal, $\mathrm{V}_{\mathrm{CM}}$, to assure that the output remains LOW.
