## ON Semiconductor ${ }^{\oplus}$

## To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore ( $\_$), the underscore ( $\_$) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild questions@onsemi.com.

## FSA3341 — High-Speed 4:1 USB2.0 / MHL™ Switch

## Features

- Low On Capacitance: 4.2 pF / 5 pF MHL / USB (Typical)
- Low Power Consumption: $30 \mu \mathrm{~A}$ Maximum
- Supports MHL Rev. 2.0
- Three USB2.0 Paths
- MHL Data Rate: 4.0 Gbps
- Packaged in 16-Lead UMLP ( $1.8 \times 2.6 \mathrm{~mm}$ )
- Over-Voltage Tolerance on All USB Ports: Up to 5.25 V without External Components

## Applications

- Cell Phones and Digital Cameras

Figure 1. Typical Application

## Description

The FSA3341 is a bi-directional, low-power, high-speed, 4:1, USB2.0 and $\mathrm{MHL}^{\mathrm{TM}}$ switch. Configured as a Double-Pole, Four-Throw (DP4T) switch; it is optimized for switching between high- or full-speed USB and Mobile High-Definition Link sources (MHL Rev. 2.0 specification). In addition, the USB2.0 paths can be used as UART paths.

The FSA3341 contains circuitry on the switch I/O pins that allows the device to withstand an over-voltage condition for applications where the $\mathrm{V}_{\mathrm{Cc}}$ supply is powered off ( $\mathrm{V}_{\mathrm{cc}}=0 \mathrm{~V}$ ). This switch is designed to minimize current consumption even when the control voltage applied to the control pins is lower than the supply voltage ( $\mathrm{V}_{\mathrm{cc}}$ ). This is especially valuable in mobile applications, such as cell phones, allowing direct interface with the general-purpose I/Os of the baseband processor. Other applications include switching and connector sharing in portable cell phones, digital cameras, and notebook computers.

## Ordering Information

| Part Number | Top Mark | Operating Temperature Range | Package |
| :---: | :---: | :---: | :---: |
| FSA3341UMX | LY | -40 to $+85^{\circ} \mathrm{C}$ | $16-$ Lead, Ultrathin Molded Leadless Package <br> (UMLP), $1.8 \mathrm{~mm} \times 2.6 \mathrm{~mm}$ |

All trademarks are the property of their respective owners.

## Pin Configuration

Figure 2. Pin Assignments

Figure 3. Top Through View

## Pin Definitions

| Pin\# | Name | Description |
| :---: | :---: | :--- |
| 1 | MHL+ | MHL Differential Data (Positive) |
| 2 | MHL- | MHL Differential Data (Negative) |
| 3 | USBD1+ | USB Differential Data (Positive); also can be used as additional UART |
| 4 | USBD1- | USB Differential Data (Negative); also can be used as additional UART |
| 5 | USBD3+ | USB Differential Data (Positive); also can be used as additional UART |
| 6 | USBD3- | USB Differential Data (Negative); also can be used as additional UART |
| 7 | USBD2+ | USB Differential Data (Positive); can be used as a UART port (see Figure 1) |
| 8 | USBD2- | USB Differential Data (Negative); can be used as a UART port (see Figure 1) |
| 9 | GND | Ground |
| 10 | D- | USB Differential Data (Negative), Common Port |
| 11 | D+ | USB Differential Data (Positive), Common Port |
| 12 | GND | Ground |
| 13 | S1 | Data Switch Select (see Table 1) |
| 14 | S0 | Data Switch Select (see Table 1) |
| 15 | /EN | Enable Pin - Active LOW |
| 16 | VCC | Device Power from System (Typically V BAT) |

Figure 4. Analog Symbol

Table 1. Data Switch Select Truth Table

| SEL1 $^{(\mathbf{1})}$ | SEL0 $^{\mathbf{( 1 )}}$ | /EN $^{\mathbf{( 1 )}}$ | Function |
| :---: | :---: | :---: | :--- |
| 0 | 0 | 0 | D+/D- connected to USBD1+/ <br> USBD1- (or UART) path |
| 0 | 1 | 0 | D+/D- connected to USBD2+/USBD2- <br> (or UART) path |
| 1 | 0 | 0 | D+/D- connected to MHL+/MHL- path |
| 1 | 1 | 0 | D+/D- connected to USBD3+/USBD3- <br> (or UART) path |
| X | X | 1 | D+/D- high impedance |

## Note:

1. Control inputs should never be left floating or unconnected.

To guarantee default switch closure to the USB position, the SEL[0:1] pins are tied to GND with internal weak pull-down resistors (3 $\mathrm{M} \Omega$ ) to minimize static current draw.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

| Symbol | Parameter |  | Min. | Max. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $V_{\text {cc }}$ | Supply Voltage |  | -0.5 | 5.5 | V |
| $\mathrm{V}_{\text {CNTRL }}$ | DC Input Voltage (/EN, SEL[1:0]) ${ }^{(2)}$ |  | -0.5 | $\mathrm{V}_{\mathrm{Cc}}$ | V |
| $\mathrm{V}_{\mathrm{SW}}{ }^{(3)}$ | DC Switch I/O Voltage ${ }^{(2)}$ | USB, MHL | -0.5 | $\mathrm{V}_{\mathrm{CC}}$ | V |
| 1 IK | DC Input Diode Current |  | -50 |  | mA |
| lout | Switch DC Output Current (Continuous) | USB, MHL |  | 60 | mA |
| loutpeak | Switch DC Output Peak Current (Pulsed at 1 ms Duration, <10\% Duty Cycle) | USB, MHL |  | 150 | mA |
| $\mathrm{T}_{\text {STG }}$ | Storage Temperature |  | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |
| MSL | Moisture Sensitivity Level: JEDEC J-STD-020A |  |  | 1 |  |
| ESD | Human Body Model, JEDEC: JESD22-A114 | All Pins |  | 4 | kV |
|  | IEC 61000-4-2, Level 4, for D+/D- and $\mathrm{V}_{\mathrm{CC}}$ Pins $^{(4)}$ | Contact |  | 8 |  |
|  | IEC 61000-4-2, Level 4, for D+/D- and $\mathrm{V}_{\mathrm{CC}}$ Pins $^{(4)}$ | Air |  | 15 |  |
|  | Charged Device Model, JESD22-C101 |  |  | 2 |  |

## Notes:

2. The input and output negative ratings may be exceeded if the input and output diode current ratings are observed.
3. $V_{s w}$ refers to analog data switch paths (USB, MHL, and audio).
4. Testing performed in a system environment using TVS diodes.

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

| Symbol | Parameter | Min. | Max. | Unit |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CC}}$ | Supply Voltage | 2.5 | 4.5 | V |
| $\mathrm{t}_{\mathrm{RAMP}(\mathrm{VCC})}$ | Power Supply Slew Rate | 100 | 1000 | $\mu \mathrm{~s} / \mathrm{V}$ |
| $\mathrm{V}_{\mathrm{CNTRL}}$ | Control Input Voltage (/EN, SEL[1:0]) $)^{(5)}$ | 0 | 4.5 | V |
| $\mathrm{~V}_{\mathrm{SW}(\mathrm{USB})}$ | Switch I/O Voltage (USB Switch Path) | -0.5 | 3.6 | V |
| $\Theta_{\mathrm{JA}}$ | Thermal Resistance |  | 273 | $\mathrm{C}^{\circ} / \mathrm{W}$ |
| $\mathrm{V}_{\mathrm{SW}(\mathrm{MHL})}$ | Switch I/O Voltage (MHL Switch Path) | 1.65 | 3.45 | V |
| $\mathrm{~T}_{\mathrm{A}}$ | Operating Temperature | -40 | +85 | ${ }^{\circ} \mathrm{C}$ |

## Note:

5. The control inputs must be held HIGH or LOW; they must not float.

## DC Electrical Characteristics

All typical values are at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ unless otherwise specified.

| Symbol | Parameter | Condition | $\mathrm{V}_{\mathrm{cc}}$ <br> (V) | $\mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |  | Unit |

## Functional Description

## Insertion Loss

One of the key advantages of using the FSA3341 in mobile digital-video applications is the small amount of insertion loss experienced by the received signal as it passes through the switch. This results in minimal degradation to the received eye. One of the ways to measure the quality of the high-data-rate channels is using balanced ports and four-port differential S-parameter analysis, particularly SDD21.
Bandwidth is measured using the S-parameter SDD21 methodology.

## Typical Applications

Figure 19 shows the FSA3341 utilizing the $V_{\text {bAt }}$ connection. The $3 \mathrm{M} \Omega$ resistors are used to ensure, for manufacturing test via the micro-USB connector, that the FSA3341 configures for connectivity to the baseband or application processor.

#### Abstract

ON Semiconductor and ON are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
