Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="mailto:www.onsemi.com">www.onsemi.com</a>. ## FST6800 10-Bit Bus Switch with Precharged Outputs

#### **General Description**

The Fairchild Switch FST6800 provides 10-bits of highspeed CMOS TTL-compatible bus switching. The low on resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise. The device precharges the B Port to a selectable bias voltage (BiasV) to minimize live insertion noise.

The device is organized as a 10-bit switch with a bus enable ( $\overline{OE}$ ) signal. When  $\overline{OE}$  is LOW, the switch is ON and Port A is connected to Port B. When  $\overline{OE}$  is HIGH, the switch is OPEN and the B Port is precharged to BiasV through an equivalent 10-k $\Omega$  resistor.

#### Features

•  $4\Omega$  switch connection between two ports.

June 1997

Revised November 2000

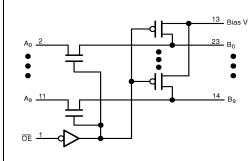

- Minimal propagation delay through the switch.
- Low I<sub>CC</sub>.
- Zero bounce in flow-through mode.
- Output precharge to minimize live insertion noise.
- Control inputs compatible with TTL level.
