## ON Semiconductor ${ }^{\oplus}$

## To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore ( $\_$), the underscore ( $\_$) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild questions@onsemi.com.

# FXL2SD106 <br> Low－Voltage Dual－Supply 6－Bit Voltage Translator with Auto－Direction Sensing 

## Features

－Bi－Directional Interface between Two Levels：1．1V and 3．6V
－Fully Configurable：Inputs and Outputs Track $\mathrm{V}_{\mathrm{CC}}$ Level
－Non－Preferential Power－up；Either $\mathrm{V}_{\mathrm{CC}}$ May Be Powered－up First
－Outputs Remain in 3－State until Active $\mathrm{V}_{\mathrm{CC}}$ Level is Reached
－Outputs Switch to 3－State if Either $V_{C C}$ is at GND
－Power－Off Protection
－Bus hold on Data Inputs Eliminates Need for Pull－ up Resistors（Do NOT Use Resistors on the A or B Ports）
－OE and CLK IN are Referenced to $\mathrm{V}_{\mathrm{CCA}}$ Voltage
－Packaged in 16 －Terminal DQFN（ $2.5 \mathrm{~mm} \times 3.5 \mathrm{~mm}$ ）
－Direction Control Not Needed
－ 80 Mbps Throughput Translating between 1．8V and 2.5 V
－ESD Protection Exceeds：
－12kV HBM（B port I／O to GND） （per JESD22－A114 \＆Mil Std 883e 3015．7）
－8kV HBM（A port I／O to GND）
（per JESD22－A114 \＆Mil Std 883e 3015．7）
－1kV CDM（per ESD STM 5．3）

## General Description

The FXL2SD106 is a configurable dual－voltage－supply translator designed for both uni－directional and bi－ directional voltage translation between two logic levels． The device allows translation between voltages as high as 3.6 V to as low as 1.1 V ．The A port tracks the $\mathrm{V}_{\mathrm{CCA}}$ level and the $B$ port tracks the $\mathrm{V}_{\mathrm{CCB}}$ level．This allows for bi－directional voltage translation over a variety of voltage levels： $1.2 \mathrm{~V}, 1.5 \mathrm{~V}, 1.8 \mathrm{~V}, 2.5 \mathrm{~V}$ ，and 3.3 V ．

The device remains in 3－state until both $\mathrm{V}_{\mathrm{Cc}}$ reach active levels，allowing either $\mathrm{V}_{\mathrm{CC}}$ to be powered－up first．Inter－ nal power－down control circuits place the device in 3－ state if either $V_{C C}$ is removed．

The OE input，when low，disables both $A$ and $B$ ports by placing them in a 3 －state condition．The FXL2SD106 is designed so that OE and CLK IN are supplied by $\mathrm{V}_{\mathrm{CCA}}$ ．
The device senses an input signal on A or B port auto－ matically．The input signal is transferred to the other port．
The FXL2SD106 is not designed for SD card applica－ tions．The internal bus hold circuitry conflicts with pull－up resistors．SD cards have internal pull－up resistors on the CD／DAT3 pins．

## Ordering Information

| Order Number | Package Number | Package Description |
| :---: | :---: | :---: |
| FXL2SD106BQX | MLP16E | 16－Terminal Depopulated Quad Very－Thin Flat Pack， <br> No Leads（DQFN），JEDEC MO－241，2．5mm $\times 3.5 \mathrm{~mm}$ |

## Connection Diagram

Pin Description

| Number | Name | Description |
| :---: | :---: | :--- |
| 1 | $\mathrm{~V}_{\text {CCA }}$ | A-Side Power Supply |
| 2 | CLK IN | A-Side Input |
| $3-7$ | $\mathrm{~A}_{0}-\mathrm{A}_{4}$ | A-Side Inputs or 3-State Outputs |
| 8 | OE | Output Enable Input |
| 9 | GND | Ground |
| $10-14$ | $\mathrm{~B}_{4}-\mathrm{B}_{0}$ | B-Side Inputs or 3-State Outputs |
| 15 | CLK OUT | 3-State Output |
| 16 | $\mathrm{~V}_{\mathrm{CCB}}$ | B-Side Power Supply |

## Functional Diagram

Function Table

| Control | Outputs |
| :---: | :---: |
| OE |  |
| LOw Logic Level | 3-State |
| HIGH Logic Level | Normal Operation |

## Power-Up/Power-Down Sequencing

FXL translators offer an advantage in that either $\mathrm{V}_{\mathrm{CC}}$ may be powered up first. This benefit derives from the chip design. When either $\mathrm{V}_{\mathrm{CC}}$ is at 0 volts, outputs are in a high-impedance state. The control input (OE) is designed to track the $\mathrm{V}_{\text {CCA }}$ supply. A pull-down resistor tying OE to GND should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up / power-down. The size of the pull-down resistor is based upon the current-sinking capability of the device driving the OE pin.

The recommended power-up sequence is the following:

1. Apply power to the first $\mathrm{V}_{\mathrm{Cc}}$.
2. Apply power to the second $\mathrm{V}_{\mathrm{CC}}$.
3. Drive the OE input high to enable the device.

The recommended power-down sequence is the following:

1. Drive OE input low to disable the device.
2. Remove power from either $\mathrm{V}_{\mathrm{CC}}$.
3. Remove power from other $\mathrm{V}_{\mathrm{CC}}$.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

| Symbol | Parameter | Rating |
| :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CCA}}, \mathrm{V}_{\text {CCB }}$ | Supply Voltage | -0.5 V to +4.6 V |
| $V_{1}$ | DC Input Voltage <br> I/O Port A <br> I/O Port B <br> OE, CLK IN | $\begin{aligned} & -0.5 \mathrm{~V} \text { to }+4.6 \mathrm{~V} \\ & -0.5 \mathrm{~V} \text { to }+4.6 \mathrm{~V} \\ & -0.5 \mathrm{~V} \text { to }+4.6 \mathrm{~V} \end{aligned}$ |
| $\mathrm{V}_{\mathrm{O}}$ | Output Voltage ${ }^{(1)}$ Outputs 3-STATE Outputs Active ( $A_{n}$ ) Outputs Active ( $\mathrm{B}_{\mathrm{n}}$, CLK OUT) | $\begin{array}{r} -0.5 \mathrm{~V} \text { to }+4.6 \mathrm{~V} \\ -0.5 \mathrm{~V} \text { to } \mathrm{V}_{\mathrm{CCA}}+0.5 \mathrm{~V} \\ -0.5 \mathrm{~V} \text { to } \mathrm{V}_{\mathrm{CCB}}+0.5 \mathrm{~V} \end{array}$ |
| $\mathrm{I}_{\text {IK }}$ | DC Input Diode Current at $\mathrm{V}_{1}<0 \mathrm{~V}$ | -50mA |
| $\mathrm{I}_{\mathrm{OK}}$ | DC Output Diode Current at $\begin{aligned} & \mathrm{V}_{\mathrm{O}}<0 \mathrm{~V} \\ & \mathrm{~V}_{\mathrm{O}}>\mathrm{V}_{\mathrm{Cc}} \end{aligned}$ | $\begin{aligned} & -50 \mathrm{~mA} \\ & +50 \mathrm{~mA} \end{aligned}$ |
| $\mathrm{IOH} / \mathrm{l} \mathrm{OL}$ | DC Output Source/Sink Current | $-50 \mathrm{~mA} /+50 \mathrm{~mA}$ |
| $\mathrm{I}_{\mathrm{CC}}$ | DC V ${ }_{\text {CC }}$ or Ground Current per Supply Pin | $\pm 100 \mathrm{~mA}$ |
| $\mathrm{T}_{\text {STG }}$ | Storage Temperature Range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |

## Note:

1. $\mathrm{I}_{\mathrm{O}}$ Absolute Maximum Rating must be observed.

## Recommended Operating Conditions ${ }^{(2)}$

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

| Symbol | Parameter | Rating |
| :---: | :---: | :---: |
| $\mathrm{V}_{\text {CCA }}$ or $\mathrm{V}_{\text {CCB }}$ | Power Supply Operating | 1.1 V to 3.6 V |
|  | Input Voltage <br> Port A <br> Port B <br> OE, CLK IN | $\begin{gathered} 0.0 \mathrm{~V} \text { to } 3.6 \mathrm{~V} \\ 0.0 \mathrm{~V} \text { to } 3.6 \mathrm{~V} \\ 0.0 \mathrm{~V} \text { to } \mathrm{V}_{\mathrm{CCA}} \end{gathered}$ |
|  | ```Dynamic Output Current in \(\mathrm{I}_{\mathrm{OH}} / \mathrm{I}_{\mathrm{OL}}\) with \(\mathrm{V}_{\mathrm{CC}}\) at 3.0 V to 3.6 V 2.3 V to 2.7 V 1.65 V to 1.95 V 1.4 V to 1.65 V 1.1 V to 1.4 V``` | $\begin{gathered} \pm 18.0 \mathrm{~mA} \\ \pm 11.8 \mathrm{~mA} \\ \pm 7.4 \mathrm{~mA} \\ \pm 5.0 \mathrm{~mA} \\ \pm 2.6 \mathrm{~mA} \end{gathered}$ |
|  | Static Output Current $\mathrm{I}_{\mathrm{OH}} / \mathrm{I}_{\mathrm{OL}}$ with $\mathrm{V}_{\mathrm{CC}}$ at 1.1 V to 3.6 V | $\pm 20.0 \mu \mathrm{~A}$ |
| $\mathrm{T}_{\mathrm{A}}$ | Free Air Operating Temperature | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| $\Delta \mathrm{t} / \Delta \mathrm{V}$ | Maximum Input Edge Rate $\mathrm{V}_{\text {CCA }}=1.1 \mathrm{~V}$ to 3.6 V | 10ns/V |

## Note:

2. All unused inputs and $\mathrm{I} / \mathrm{O}$ pins must be held at $\mathrm{V}_{\mathrm{CCI}}$ or GND .

## Notes:

3. This is the output voltage for static conditions. Dynamic drive specifications are given in "Dynamic Output Electrical Characteristics."
4. An external driver must source at least the specified current to switch LOW-to-HIGH.
5. An external driver must source at least the specified current to switch HIGH-to-LOW.
6. "Don't Care" indicates any valid logic level.
7. $\mathrm{V}_{\mathrm{CCI}}$ is the $\mathrm{V}_{\mathrm{CC}}$ associated with the input side.
8. Reflects current per supply, $\mathrm{V}_{\mathrm{CCA}}$ or $\mathrm{V}_{\mathrm{CCB}}$.

| $\mathrm{t}_{\text {skew }}{ }^{(12)}$ | A Port, B Port |  | 1.0 |  | 1.0 |  | 1.0 |  | 1.0 | 1.0 | ns |

## Note:

12. Skew is the variation of propagation delay between output signals and applies only to output signals on the same port $\left(\mathrm{A}_{\mathrm{n}}\right.$ or $\mathrm{B}_{\mathrm{n}}$ ) and switching with the same polarity (Low-to-High or High-to-Low). See Figure 8.

## Maximum Data Rate ${ }^{(13)(14)}$

| $\mathrm{V}_{\text {cCA }}$ | $\mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CCB}}=$ |  |  |  |  | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3.0 V to 3.6 V | 2.3V to 2.7 V | 1.65 V to 1.95 V | 1.4 V to 1.6 V | 1.1V to 1.3V |  |
|  | Min. | Min. | Min. | Min. | Typ. |  |
| $\mathrm{V}_{\text {CCA }}=3.0 \mathrm{~V}$ to 3.6 V | 100 | 100 | 80 | 60 | 20 | Mbps |
| $\mathrm{V}_{\mathrm{CCA}}=2.3 \mathrm{~V}$ to 2.7 V | 100 | 100 | 80 | 60 | 20 | Mbps |
| $\mathrm{V}_{\mathrm{CCA}}=1.65 \mathrm{~V}$ to 1.95 V | 80 | 80 | 60 | 40 | 20 | Mbps |
| $\mathrm{V}_{\text {CCA }}=1.4 \mathrm{~V}$ to 1.6 V | 60 | 60 | 40 | 40 | 20 | Mbps |
|  | Typ. | Typ. | Typ. | Typ. | Typ. |  |
| $\mathrm{V}_{\text {CCA }}=1.1 \mathrm{~V}$ to 1.3 V | 20 | 20 | 20 | 20 | 20 | Mbps |

## Note:

13. Maximum data rate is guaranteed but not tested.
14. Maximum data rate is specified in megabits per second. See Figure 7. It is equivalent to two times the F-toggle frequency, specified in megahertz. For example, 100 Mbps is equivalent to 50 MHz .

Capacitance

## DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TOMAKE CHANGES WTHOUT FURTHER NOTICE TOANY PRODUCTS HEREIN TOIMPROVE RELIABIUTY, FUNCTION, ORDESIGN. FAIRCHILDDOESNOT ASSUME ANY LIABIUTY ARISING OUT OF THE APPUCATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DONOT EXPAND THE TERMS OF FAIRCHID'S WORDDMDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WTHOUT THE EXPRESS WRITIEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION
As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY
Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website,
waw.fairchildsemi.com, under Sales Support.
Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS
Definition of Terms

| Datasheet Identification | Product Status | Definition |
| :---: | :---: | :--- |
| Advance Information | Formative / In Design | Datasheet contains the design specifications for product development. Specifications may change <br> in any manner without notice. |
| Preliminary | First Production | Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild <br> Semiconductor reserves the right to make changes at any time without notice to improve design. |
| No Identification Needed | Full Production | Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make <br> changes at any time without notice to improve the design. |
| Obsolete | Not In Production | Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. <br> The datasheet is for reference information only. |

#### Abstract

ON Semiconductor and ON are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
