## LV3313PM

## Electronic Volume for Car Audio Systems

ON Semiconductor ${ }^{\text {® }}$
www.onsemi.com

PQFP44 10x10 / QIP44M

## Functions

- Input selector :

Four input signals can be selected (three single-ended inputs and one differential input).

- Input gain control :

The input signal can be amplified by 0 dB to +18 dB ( 1 dB steps).

- Loudness control :

Taps are output starting at the -32 dB position of the ladder resistor and a loudness function implemented with external capacitor and resistor components.

- Volume control : +10 dB to $-79 \mathrm{~dB} /-\infty$ (1 dB steps)

L/R independent control.

- Bass control : +12 dB to -12 dB in 2 dB steps
- Treble control : +12 dB to -12 dB in 2 dB steps
- Fader control :

The fader volume can be attenuations by one of 16 levels. Independent control each four channels. (A total of 16 settings with attenuations of 0 dB to -2 dB in 1 dB steps, -2 dB to -20 dB in 2 dB steps, and -30 dB , $-45 \mathrm{~dB},-60 \mathrm{~dB}$ and $-\infty \mathrm{dB}$ settings.)

- Mute

## ORDERING INFORMATION

See detailed ordering and shipping information on page 19 of this data sheet.

Absolute Maximum Ratings at $\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{SS}}=0 \mathrm{~V}$

| Parameter | Symbol | Conditions | Ratings | Unit |
| :--- | :---: | :--- | ---: | :---: |
| Maximum supply voltage | $\mathrm{V}_{\mathrm{DD}} \mathrm{max}$ | $\mathrm{V}_{\mathrm{DD}}$ | $\mathrm{V}_{\mathrm{SS}}-0.3$ to $\mathrm{V}_{\mathrm{DD}}$ | V |
| Maximum input voltage | $\mathrm{V}_{\text {IN }} \max$ | All input pins | 600 | mW |
| Allowable power dissipation | $\mathrm{Pd} \max$ | $\mathrm{Ta} \leq 85^{\circ} \mathrm{C}$, when mounted on a printed <br> circuit board |  | -40 to +85 |
| Operating temperature | Topr |  | ${ }^{\circ} \mathrm{C}$ |  |
| Storage temperature | Tstg |  | -50 to +125 | ${ }^{\circ} \mathrm{C}$ |

* Specified circuit board : $114.3 \times 76.1 \times 1.6 \mathrm{~mm}$ : glass epoxy board

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Allowable Operating Ratings at $\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{SS}}=0 \mathrm{~V}$

| Parameter | Symbol | Conditions | Ratings |  |  | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | min | typ | max |  |
| Supply voltage | VDD | VDD | 7.0 | 8.0 | 9.0 | V |
| High-level input voltage | $\mathrm{V}_{\text {IH }}$ | CL, DI, CE | 3.0 |  | 5.5 | V |
| Low-level input voltage | $\mathrm{V}_{\text {IL }}$ | CL, DI, CE | $\mathrm{V}_{\text {SS }}$ |  | 1.0 | V |
| Input voltage amplitude | VIN |  | VSS |  | VDD | Vp-p |
| Input pulse width | TфW | CL | 1 |  |  | $\mu \mathrm{s}$ |
| Setup time | Tsetup | CL, DI, CE | 1 |  |  | $\mu \mathrm{S}$ |
| Hold time | Thold | CL, DI, CE | 1 |  |  | $\mu \mathrm{S}$ |
| Operating frequency | fopg | CL |  |  | 500 | kHz |
| Rising time | tr | CL, DI, CE |  |  | 0.1/fopg | s |
| Falling time | tf |  |  |  |  |  |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Electrical Characteristics at $\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{DD}}=8 \mathrm{~V}, \mathrm{~V}_{\mathrm{SS}}=0 \mathrm{~V}$

| Parameter | Symbol | Conditions | Ratings |  |  | Unit |

| Pin No. | Pin name | Function | IC test pin. <br> Normally this pin is OPEN. |
| :---: | :--- | :--- | :--- |
| 39 | TEST | Logic system ground pin. | External oscillat input pin. <br> Normally this pin is OPEN. |
| 14 | DVSS | OSC | Automatic zero cross detection pin. |
| 40 | PH |  |  |

(1) Data Transmission at power on

- The status of internal analog switches is unstable at power on. Therefore, perform muting or some other countermeasure until the data has been set.
- At power on, initial setting data must be sent once in order to stabilize the bias of each block in a short time.

## (2) Description of zero cross switching circuit operation

The LV3313PM have a function to switch zero cross comparator signal detection locations, enabling the selection of the optimum detection location for blocks whose data is to be updated.Basically, the switching noise can be minimized by inputting the signal immediately following the block whose data is to be updated to the zero cross comparator, so it is necessary to switch the detection location every time.

LV3313PM zero cross detection circuit

## (3) Zero Cross Switching Control method

The zero cross switching control method consists of setting the zero cross control bits to the zero cross detection mode, and specifying the detection blocks before transmitting the data. These control bits are latched immediately following data transfer, that is to say beforehand in sync with the falling edge of CE , so when updating data of volumes, etc., it is possible to perform mode setting and zero cross switching with one data transfer.

## (4) Soft mute operation

The LV3313PM have a soft mute function for low switching noise, when this mute function set operation. (mute/unmute function select)
The Soft mute time can be selected by send to CCB control. ( $0.6 \mathrm{~ms}, 5 \mathrm{~ms}, 40 \mathrm{~ms}, 80 \mathrm{~ms}$ )
A soft mute function can be implemented by set to soft mute on. (Set to mute on/off)

#### Abstract

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
