Bi-CMOS IC

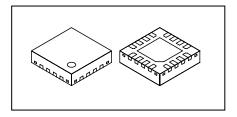

Step-down Switching Regulator

Overview

LV5762QA is a 1ch step-down voltage switching regulator.

Function

- 1ch step-down switching regulator controller
- Load-independent soft start circuit
- Frequency fold back function
- ON/OFF function
- Built-in pulse-by-pulse OCP circuit.
 It is detected by using ON resistance of an external MOS.

 $VQFN16J (3.0 \times 3.0)$

Specifications

Absolute Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	V _{IN} max		45	٧
Allowable power dissipation	Pd max	*)	0.65	W
Operating temperature	Topr		-40 to 85	°C
Storage temperature	Tstg		–55 to 150	°C

^{*} Specified board: 24.0mm × 15.0mm ×1.6mm, glass epoxy board (2-layer).

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Recommended Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage range 1	V _{IN}		8 to 42	V
Error amplifier input coltage	V _{FB}		0 to 1.6	٧

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

ORDERING INFORMATION

See detailed ordering and shipping information on page 6 of this data sheet.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

Package Dimensions

unit: mm

WQFN16 3x3, 0.5P / VQFN16J

CASE 510AX **ISSUE A**

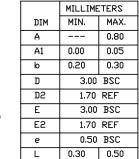

NOTES:

- 1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
- CONTROLLING DIMENSION: MILLIMETERS
- DIMENSION & APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.15 AND 0.30 MM FROM THE TERMINAL TIP.
- COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS. THE TERMINALS.

^{*}This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot " ■", may or may not be present.

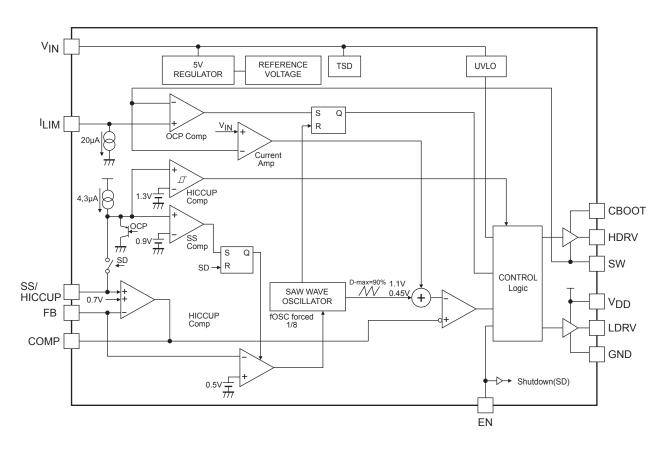

Pin Assignment

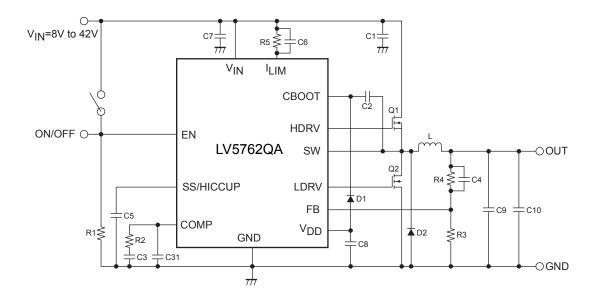

Pin Function

Pin No.	Pin name	Function	
1	COMP	Error amplifier output pin.	
		Connect a phase compensation circuit between this pin and GND.	
2	EN	ON/OFF pin.	
3	SW	Pin to connect with switching node. The source of Nch MOSFET connects to this pin.	
4	СВООТ	Bootstrap capacity connection pin. This pin becomes a GATE drive power supply of an external Nch MOSFET.	
		Connect a bypath capacitor between CBOOT and SW.	
5	HDRV	An external the upper MOSFET gate drive pin.	
6	NC	No connection	
7			
14			
15			
8	LDRV	An external the lower MOSFET gate drive pin.	
9	V_{DD}	Power supply pin for an external the MOS-FET gate drive.	
10	GND	Ground pin. Each reference voltage is based on the voltage of the ground pin.	
11	V _{IN}	Power supply pin.	
		This pin is monitored by UVLO function. When the voltage of this pin becomes 7.8V or more by UVLO function, The IC	
		starts and the soft start function operates.	
12	I _{LIM}	Reference current pin for current detection.	
		The sink current of about 20µA flows to this pin. When a resistance is connected between this pin and V _{IN} outside and	
		the voltage applied to the SW pin is lower than the voltage of the terminal side of the resistance, the upper Nch MOSFET	
		is off by operating the current limiter comparator. This operation is reset with respect to each PWN pulse.	
13	SS/HICCUP	Pin to connect a capacitor for soft start. A capacitor for soft start is charged by using the voltage of about 4.3μA.	
		This pin ends the soft start period by using the voltage of about 0.9V and the frequency fold back function becomes	
		active.	
16	FB	Error amplifier reverse input pin.	
		By operating the converter, the voltage of this pin becomes 0.7V.	
		The voltage in which the output voltage is divided by an external resistance is applied to this pin.	
		Also, the oscillation frequency become one-eighth when the voltage of this pin becomes 0.4V or less after soft start	
		function.	
17	SUBGND	Connect to GND
