## MC100LVEL29

### 3.3 V ECL Dual Differential Data and Clock D Flip-Flop with Set and Reset

## Description

The MC100LVEL29 is a dual master-slave flip-flop. The device features fully differential Data and Clock inputs as well as outputs. The MC100LVEL29 is pin and functionally equivalent to the MC100EL29. Data enters the master latch when the clock is LOW and transfers to the slave upon a positive transition on the clock input.

The differential inputs have special circuitry which ensures device stability under open input conditions. When both differential inputs are left open the D input will pull down to $\mathrm{V}_{\mathrm{EE}}$ and the $\overline{\mathrm{D}}$ input will bias around $\mathrm{V}_{\mathrm{CC}} / 2$. The outputs will go to a defined state, however the state will be random based on how the flip flop powers up.

Both flip flops feature asynchronous, overriding Set and Reset inputs. Note that the Set and Reset inputs cannot both be HIGH simultaneously.

The $\mathrm{V}_{\mathrm{BB}}$ pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to $\mathrm{V}_{\mathrm{BB}}$ as a switching reference voltage. $\mathrm{V}_{\mathrm{BB}}$ may also rebias AC coupled inputs. When used, decouple $\mathrm{V}_{\mathrm{BB}}$ and $\mathrm{V}_{\mathrm{CC}}$ via a $0.01 \mu \mathrm{~F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, $\mathrm{V}_{\mathrm{BB}}$ should be left open.

## Features

- 1100 MHz Flip-Flop Toggle Frequency
- ESD Protection: > 2 kV Human Body Model
- 580 ps Typical Propagation Delays
- The 100 Series Contains Temperature Compensation
- PECL Mode Operating Range: $\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ to 3.8 V with $\mathrm{V}_{\mathrm{EE}}=0 \mathrm{~V}$
- NECL Mode Operating Range: $\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$
with $\mathrm{V}_{\mathrm{EE}}=-3.0 \mathrm{~V}$ to -3.8 V
- Internal Input Pulldown Resistors
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity: Level 3 (Pb-Free)
(For Additional Information, see Application Note AND8003/D)
- Flammability Rating: UL 94 V-0 @ 0.125 in,

Oxygen Index: 28 to 34

- Transistor Count $=313$ Devices
- These Devices are Pb-Free, Halogen Free and are RoHS Compliant

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Input and output parameters vary $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. $\mathrm{V}_{\mathrm{EE}}$ can vary $\pm 0.3 \mathrm{~V}$.
2. Outputs are terminated through a $50 \Omega$ resistor to $\mathrm{V}_{\mathrm{CC}}-2.0 \mathrm{~V}$.
3. $\mathrm{V}_{I H C M R}$ min varies $1: 1$ with $\mathrm{V}_{\text {EE }}$, max varies $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. The $\mathrm{V}_{\text {IHCMR }}$ range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between $\mathrm{V}_{\mathrm{PP}}$ min and 1 V .
