## 3.3/5 V ECL Differential Phase-Frequency Detector

## MC100LVEL40

## Description

The MC100LVEL40 is a three state phase frequency-detector intended for phase-locked loop applications which require a minimum amount of phase and frequency difference at lock. Advanced design significantly reduces the dead zone of the detector. For proper operation, the input edge rate of the R and V inputs should be less than 5 ns . The device is designed to work with a 3.3 V power supply.

When the reference (R) and the feedback (FB) inputs are unequal in frequency and/or phase the differential up (U) and down (D) outputs will provide pulse streams which when subtracted and integrated provide an error voltage for control of a VCO.

The $\mathrm{V}_{\mathrm{BB}}$ pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to $V_{B B}$ as a switching reference voltage. $\mathrm{V}_{\mathrm{BB}}$ may also rebias AC coupled inputs. When used, decouple $\mathrm{V}_{\mathrm{BB}}$ and $\mathrm{V}_{\mathrm{CC}}$ via a $0.01 \mu \mathrm{~F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, $\mathrm{V}_{\mathrm{BB}}$ should be left open.

For application information, refer to AND8040/D, "Phase Lock Loop Operation."

The 100 Series Contains Temperature Compensation.

## Features

- 250 MHz Typical Bandwidth
- PECL Mode Operating Range:
$\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ to 5.5 V with $\mathrm{V}_{\mathrm{EE}}=0 \mathrm{~V}$
- NECL Mode Operating Range:
$\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$ with $\mathrm{V}_{\mathrm{EE}}=-3.0 \mathrm{~V}$ to -5.5 V
- Internal Input Pulldown Resistor
- This Devices are $\mathrm{Pb}-$ Free, Halogen Free and are RoHS Compliant
