# 2.5V / 3.3V 1:5 Dual Differential ECL/PECL/HSTL Clock Driver

#### Description

The MC100LVEP210 is a low skew 1–to–5 dual differential driver, designed with clock distribution in mind. The ECL/PECL input signals can be either differential or single–ended if the  $V_{BB}$  output is used. The signal is fanned out to 5 identical differential outputs. HSTL inputs can be used when the EP210 is operating in PECL mode.

The LVEP210 specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

To ensure the tight skew specification is realized, both sides of the differential output need to be terminated identically into 50  $\Omega$  even if only one output is being used. If an output pair is unused, both outputs may be left open (unterminated) without affecting skew.

The MC100LVEP210, as with most other ECL devices, can be operated from a positive V<sub>CC</sub> supply in PECL mode. This allows the LVEP210 to be used for high performance clock distribution in +3.3 V or +2.5 V systems. Single–ended CLK input operation is limited to a V<sub>CC</sub>  $\geq$  3.0 V in PECL mode, or V<sub>EE</sub>  $\leq$  -3.0 V in ECL mode.

Designers can take advantage of the LVEP210's performance to distribute low skew clocks across the backplane or the board. In a PECL environment, series or Thevenin line terminations are typically used as they require no additional power supplies. For more information on using PECL, designers should refer to Application Note AN1406/D.

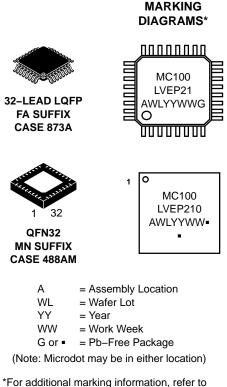

#### Features

- 85 ps Typical Device-to-Device Skew
- 20 ps Typical Output-to-Output Skew
- V<sub>BB</sub> Output
- Jitter Less than 1 ps RMS
- 350 ps Typical Propagation Delay
- Maximum Frequency > 3 GHz Typical
- The 100 Series Contains Temperature Compensation
- PECL and HSTL Mode Operating Range:  $V_{CC} = 2.375$  V to 3.8 V with  $V_{EE} = 0$  V
- NECL Mode Operating Range:  $V_{CC} = 0 V$ with  $V_{EE} = -2.375 V$  to -3.8 V
- Open Input Default State
- LVDS Input Compatible
- Fully Compatible with MC100EP210
- These are Pb–Free Devices

## **ON Semiconductor®**

For additional marking information, refer to Application Note AND8002/D.

#### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

Warning: All  $V_{CC}$  and  $V_{EE}$  pins must be externally connected to Power Supply to guarantee proper operation.

Figure 1. 32-Lead QFN Pinout (Top View)

Figure 2. LQFP-32 Pinout (Top View)

#### Table 1. PIN DESCRIPTION

PIN	FUNCTION
CLKn*, CLKn**	ECL/PECL/HSTL CLK Inputs
Qn0:4, Qn0:4	ECL/PECL Outputs
V <sub>BB</sub>	Reference Voltage Output
V <sub>CC</sub>	Positive Supply
V <sub>EE</sub>	Negative Supply
EP	The exposed pad (EP) on the QFN–32 package bottom is thermally connected to the die for improved heat transfer out of the package. THe exposed pad must be attached to a heat–sinking conduit. The pad is electrically connected to $V_{\text{EE}}$ .

\* Pins will default LOW when left open.

\*\* Pins will default to  $V_{CC}/2$  when left open.
