## MC14028B

# **BCD-To-Decimal Decoder Binary-To-Octal Decoder**

The MC14028B decoder is constructed so that an 8421 BCD code on the four inputs provides a decimal (one–of–ten) decoded output, while a 3-bit binary input provides a decoded octal (one–of–eight) code output with D forced to a logic "0". Expanded decoding such as binary–to–hexadecimal (one–of–sixteen), etc., can be achieved by using other MC14028B devices. The part is useful for code conversion, address decoding, memory selection control, demultiplexing, or readout decoding.

#### **Features**

- Diode Protection on All Inputs
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Capable of Driving Two Low-power TTL Loads or One Low-Power Schottky TTL Load Over the Rated Temperature Range
- Positive Logic Design
- Low Outputs on All Illegal Input Combinations
- Similar to CD4028B
- NLV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- This Device is Pb-Free and is RoHS Compliant

#### MAXIMUM RATINGS (Voltages Referenced to VSS)

| Parameter   | Symbol                             | Value                            | Unit |
|---|------------------------------------|----------------------------------|------|
| DC Supply Voltage Range                           | $V_{DD}$                           | -0.5 to +18.0                    | V    |
| Input or Output Voltage Range (DC or Transient)   | V <sub>in</sub> , V <sub>out</sub> | -0.5 to V <sub>DD</sub><br>+ 0.5 | V    |
| Input or Output Current (DC or Transient) per Pin | I <sub>in</sub> , I <sub>out</sub> | ±10                              | mA   |
| Power Dissipation per Package (Note 1)            | P <sub>D</sub>                     | 500                              | mW   |
| Ambient Temperature Range                         | T <sub>A</sub>                     | -55 to +125                      | °C   |
| Storage Temperature Range                         | T <sub>stg</sub>                   | -65 to +150                      | °C   |
| Lead Temperature (8–Second Soldering)             | TL                                 | 260                              | °C   |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Temperature Derating: "D/DW" Packages: -7.0 mW/°C From 65°C To 125°C This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high–impedance circuit. For proper operation,  $V_{in}$  and  $V_{out}$  should be constrained to the range  $V_{SS} \leq (V_{in} \text{ or } V_{out}) \leq V_{DD}$ .

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either  $V_{SS}$  or  $V_{DD}$ ). Unused outputs must be left open.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- 2. Data labelled "Typ" is not to be used for design purposes but is intended as an indication of the IC's potential performance.
- The formulas given are for the typical characteristics only at 25°C.
   To calculate total supply current at loads other than 50 pF: I<sub>T</sub>(C<sub>L</sub>) = I<sub>T</sub>(50 pF) + (C<sub>L</sub> 50) Vfk where: I<sub>T</sub> is in μA (per package), C<sub>L</sub> in pF, V = (V<sub>DD</sub> V<sub>SS</sub>) in volts, f in kHz is input frequency, and k = 0.001.

Inputs B, C, and D switching in respect to a BCD code.

All outputs connected to respective  $C_L$  loads. f in respect to a system clock.

Inputs A, B, and D low.

Figure 1. Dynamic Signal Waveforms

#### **LOGIC DIAGRAM**

#### **APPLICATIONS INFORMATION**

Expanded decoding can be performed by using the MC14028B and other CMOS Integrated Circuits. The circuit in Figure 2 converts any 4-bit code to a decimal or hexadecimal code. The accompanying table shows the input binary combinations, the associated "output numbers" that go "high" when selected, and the "redefined output numbers" needed for the proper code. For example: For the combination DCBA = 0111 the output number 7 is redefined for the 4-bit binary, 4-bit gray, excess-3, or excess-3 gray codes as 7, 5, 4, or 2, respectively. Figure 3 shows a 6-bit binary 1-of-64 decoder using nine MC14028B circuits and two MC14069UB inverters.

The MC14028B can be used in decimal digit displays, such as, neon readouts or incandescent projection indicators as shown in Figure 4.

# **MECHANICAL CASE OUTLINE**

**DATE 29 DEC 2006** 

- NOTES:
  1. DIMENSIONING AND TOLERANCING PER ANSI
- THE NOTION AND TOLETANOING FER ANSI'Y 14.5M, 1982.
  CONTROLLING DIMENSION: MILLIMETER.
  DIMENSIONS A AND B DO NOT INCLUDE MOLD PROTRUSION.
- PHOI HUSION.

  MAXIMUM MOLD PROTRUSION 0.15 (0.006) PER SIDE.

  DIMENSION D DOES NOT INCLUDE DAMBAR
  PROTRUSION. ALLOWABLE DAMBAR PROTRUSION

  SHALL BE 0.127 (0.005) TOTAL IN EXCESS OF THE D

  DIMENSION AT MAXIMUM MATERIAL CONDITION.
