## MM74C74 Dual D-Type Flip-Flop

#### **General Description**

The MM74C74 dual D-type flip-flop is a monolithic complementary MOS (CMOS) integrated circuit constructed with N- and P-channel enhancement transistors. Each flip-flop has independent data, preset, clear and clock inputs and Q and Q outputs. The logic level present at the data input is transferred to the output during the positive going transition of the clock pulse. Preset or clear is independent of the clock and accomplished by a low level at the preset or clear input.

#### Features

- Supply voltage range: 3V to 15V
- Tenth power TTL compatible: Drive 2 LPT<sup>2</sup>L loads
- High noise immunity: 0.45 V<sub>CC</sub> (typ.)
- Low power: 50 nW (typ.)
- Medium speed operation: 10 MHz (typ.) with 10V supply

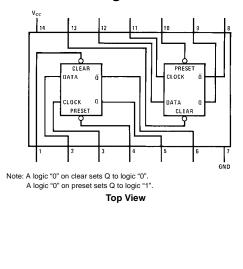

#### Applications

- Automotive
- Data terminals
- Instrumentation
- Medical electronics
- Alarm system
- Industrial electronics
- Remote metering
- Computers

### **Ordering Code:**

Order Number	Package Number	Package Description
MM74C74M	M14A	14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow
MM74C74N	N14A	14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide
Devices also available	in Tape and Reel. Specify	by appending the suffix letter "X" to the ordering code.

#### **Connection Diagram**

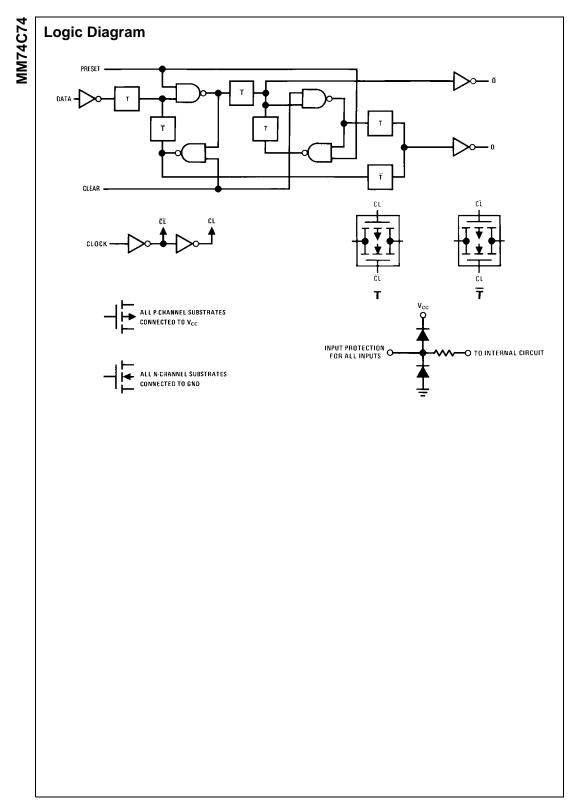

## **Truth Table**

Preset	Clear	Q <sub>n</sub>	Q <sub>n</sub>
0	0	0	0
0	1	1	0
1	0	0	1
1	1	Q <sub>n</sub> (Note 1)	Q <sub>n</sub> (Note 1)

Note 1: No change in output from previous state.

## Absolute Maximum Ratings(Note 2)

Voltage at Any Pin (Note 2) Operating Temperature Range	-0.3V to V <sub>CC</sub> +0.3V -55°C to +125°C
Storage Temperature Range	-65°C to +150°C
Power Dissipation	
Dual-In-Line	700 mW
Small Outline	500 mW
Lead Temperature	
(Soldering, 10 seconds)	260°C
Operating V <sub>CC</sub> Range	3V to 15V
V <sub>CC</sub> (Max)	18V

Note 2: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

## **DC Electrical Characteristics**

Symbol	Parameter	Conditions	Min	Тур	Max	Units	
CMOS TO	смоз				ļ		
V <sub>IN(1)</sub>	Logical "1" Input Voltage	$V_{CC} = 5V$	3.5			v	
		$V_{CC} = 10V$	80

C <sub>PD</sub>	Power Dissipation Capacitance	(Note 5)		40		q	

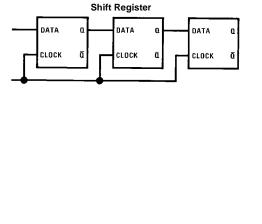

Note 3: AC Parameters are guaranteed by DC correlated testing.

Note 4: Capacitance is guaranteed by periodic testing.

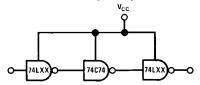

Note 5: C<sub>PD</sub> determines the no load AC power consumption of any CMOS device. For complete explanation see Family Characteristics Application Note— AN-90.

## **Typical Applications**

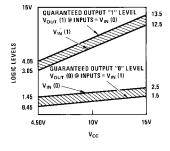

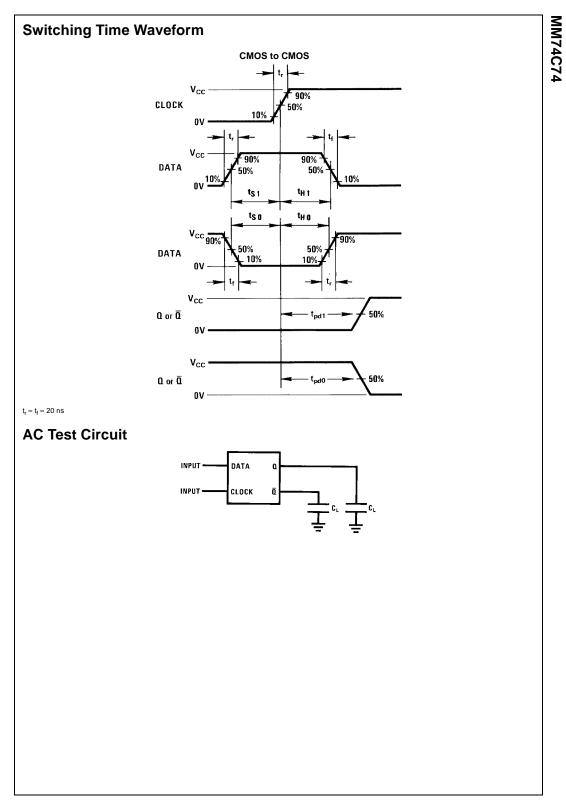

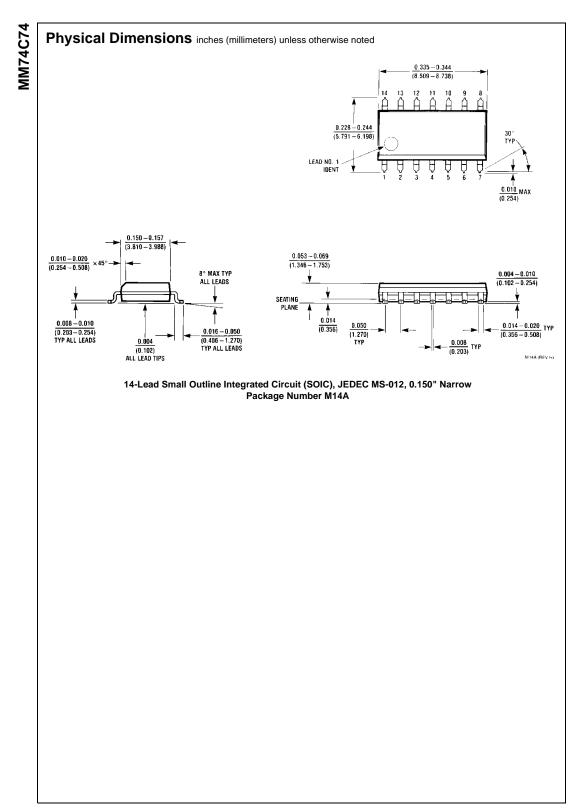

74C Compatibility

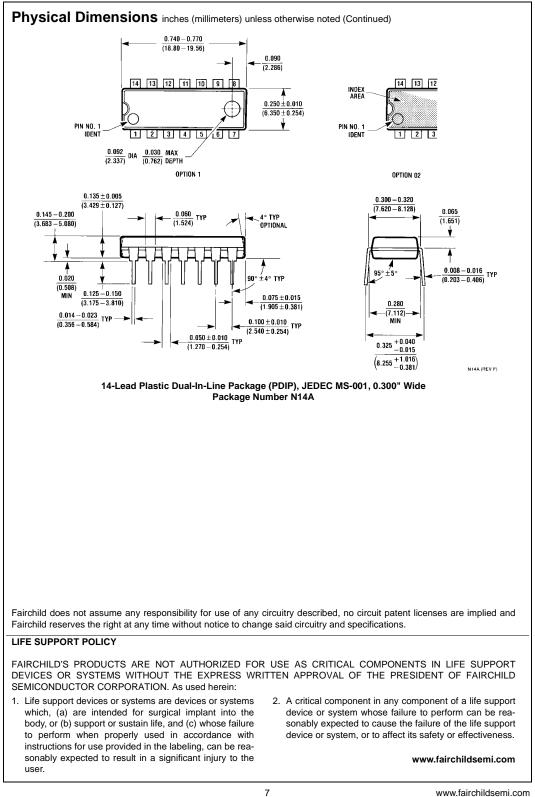

Guaranteed Noise Margin as a Function of  $\rm V_{CC}$
