NB3N108K

3.3V Differential 1:8 Fanout Clock Data Driver with HCSL Outputs

Description

The NB3N108K is a differential 1:8 Clock fanout buffer with High-speed Current Steering Logic (HCSL) outputs optimized for ultra low propagation delay variation. The NB3N108K is designed with HCSL PCI Express clock distribution and FBDIMM applications in mind.

Inputs can directly accept differential LVPECL, LVDS, HCSL signals per Figures 7, 8, and 9. Single-ended LVPECL, HCSL, LVCMOS, or LVTTTL levels are accepted with a proper external V_{th} reference supply per Figures 4 and 10. Input pins incorporate separate internal 50 Ω termination resistors allowing additional single ended system interconnect flexibility.

Output drive current is set by connecting a 475 Ω resistor from IREF (Pin 1) to GND per Figure 6. Outputs can also interface to LVDS receivers when terminated per Figure 11.

The NB3N108K specifically guarantees low output-to-output skews. Optimal design, layout, and processing minimize skew within a device and from device to device. System designers can take advantage of the NB3N108K's performance to distribute low skew clocks across the backplane or the motherboard.

Table 1. PIN DESCRIPTION

Pin	Name	I/O	Description
1	IREF		Use the IREF pin to set the output drive. Connect a 475 Ω RREF resistor from the IREF pin to GND to produce 2.6 mA of IREF current. A current mirror multiplies IREF by a factor of 5.4x to force 14 mA through a 50 Ω output load. See Figures 6 and 12.
2, 5	VTCLK, VTCLK	-	Internal 50 Ω Termination Resistor connection Pins. In the differential configuration when the input termination pins are connected to the common termination voltage, and if no signal is applied then the device may be susceptible to self-oscillation.
3	CLK	LVPECL HCSL, LVDS Input	Clock (TRUE) Input
4	$\overline{\text{CLK}}$	LVPECL HCSL, LVDS Input	Clock (INVERT) Input

13, 15, 19, 21, 23, 27, 29, 31	Q[7-0]	HCSL or LVDS (Note 1) Output	Output (TRUE) (Note 1)
6, 7, 10, 11	NC		No Connect
8	GND	-	Supply Ground. GND pin must be externally connected to power supply to guarantee proper operation.
9, 16, 17, 24, 25, 32	VCC	-	Positive Voltage Supply pin. VCC pins must be externally connected to a power supply to guarantee proper operation.
Exposed Pad	EP	GND	Exposed Pad. The thermally exposed pad (EP) on package bottom (see case drawing) must be attached to a sufficient heat-sinking conduit for proper thermal operation and electrically connected to the circuit board ground (GND).

1. Outputs can also interface to LVDS receiver when terminated per Figure 11.
