Description

The NB3N121K is a differential 1:21 Clock and Data fanout buffer with High−speed Current Steering Logic (HCSL) outputs optimized for ultra low propagation delay variation. The NB3N121K is designed with HCSL PCI Express clock distribution and FBDIMM applications in mind.

Inputs can directly accept differential LVPECL, HCSL, and LVDS signals per Figures 7, 8, and 9. Single ended LVPECL, HCSL, LVCMOS, or LVTTL levels are accepted with a proper external V_{th} reference supply per Figures 4 and 10. Input pins incorporate separate internal 50 Ω termination resistors allowing additional single ended system interconnect flexibility.

Output drive current is set by connecting a 475 Ω resistor from IREF (Pin 1) to GND per Figure 6. Outputs can also interface to LVDS receivers when terminated per Figure 11.

The NB3N121K specifically guarantees low output–to–output skew. Optimal design, layout, and processing minimize skew within a device and from device to device. System designers can take advantage of the NB3N121K's performance to distribute low skew clocks across the backplane or the motherboard.

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 10 of this data sheet.

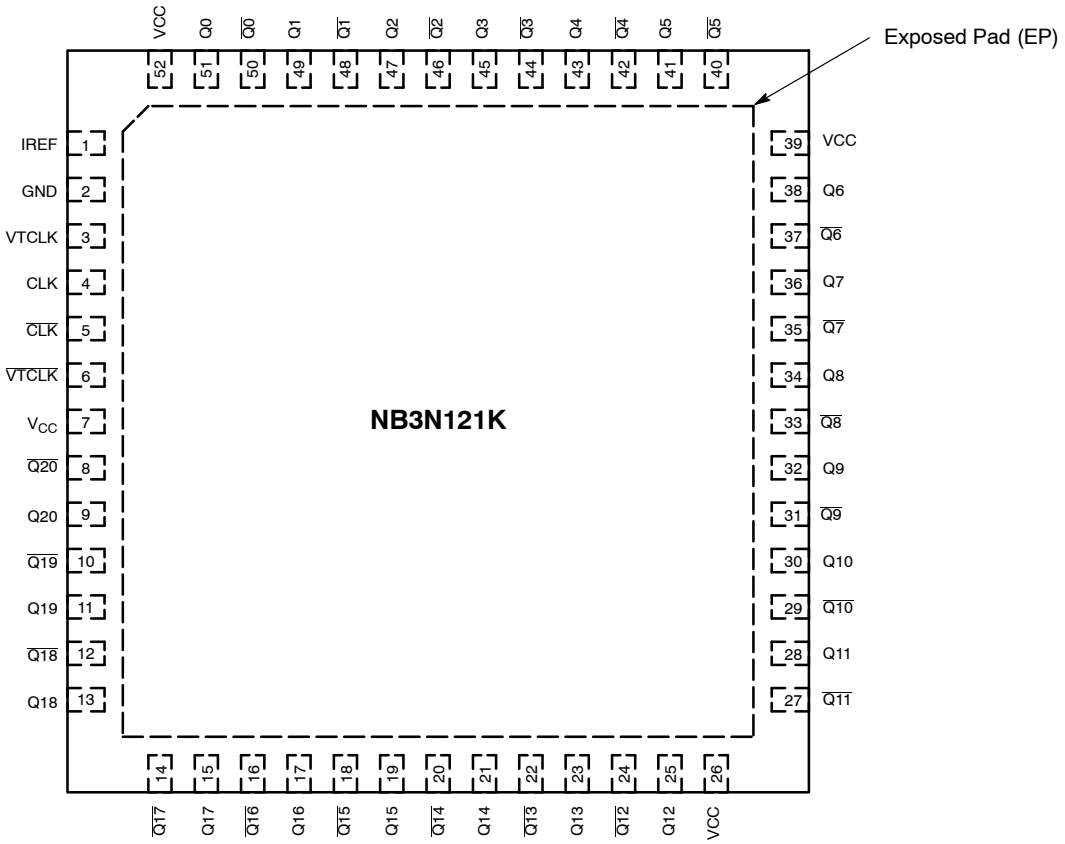

Figure 2. Pinout Configuration (Top View)

Table 1. PIN DESCRIPTION

Pin	Name	I/O	Description
1	IREF	Output	Use the IREF pin to set the output drive. Connect a 475 Ω RREF resistor from the IREF pin to GND to produce 2.63 mA of IREF current. A current mirror multiplies IREF by a factor of 5.4 to force 14.2 mA through a 50 Ω output load. See Figures 6 and 12. Minimize capacitance.
2	GND	–	Supply Ground. GND pin must be externally connected to power supply to guarantee proper operation.
3, 6	VTCLK, $\overline{\text{VTCLK}}$	–	Internal 50 Ω Termination Resistor connection Pins. In the differential configuration when the input termination pins are connected to the common termination voltage, and if no signal is applied then the device may be susceptible to self−oscillation.
4	CLK	LVPECL, HCSL, LVCMOS or LVTTL Input	Clock (TRUE) Input
5	$\overline{\text{CLK}}$	LVPECL, HCSL, LVCMOS or LVTTL Input	Clock (INVERT) Input
7, 26, 39, 52	VCC	–	Positive Supply pins. VCC pins must be externally connected to a power supply to guarantee proper operation.
8, 10, 12, 14, 16, 18, 20, 22, 24, 27, 29, 31, 33, 35, 37, 40,42, 44, 46, 48, 50	$\overline{\text{Q[20−0]}}$	HCSL or LVDS (Note 1) Output	Output (INVERT) (Note 1)
9, 11, 13, 15, 17, 19, 21, 23, 25, 28, 30, 32, 34, 36, 38, 41, 43, 45, 47, 49, 51	Q[20−0]	HCSL or LVDS (Note 1) Output	Output (TRUE) (Note 1)
Exposed Pad	EP	GND	Exposed Pad. The thermally exposed pad (EP) on package bottom (see case drawing) must be attached to a sufficient heat−sinking conduit for proper thermal operation. The pad is electrically connected ot GND and must be connected to GND on the PC board.

1. Outputs can also interface to LVDS receiver when terminated per Figure 11.
