<u>Linear Voltage Regulator</u> -Dual, V_{in} and V_{out} Voltage Detector

The NCP4672 is a dual linear voltage regulator with input voltage and output voltage detectors. This part is useful in systems where multiple voltages are required such as for core and I/O. The NCP4672 is very accurate at 2% over full input voltage and full load current. The NCP4672 eliminates the need for external voltage supervision due to the two built in voltage detectors. The voltage detector on the input is set to 7.0 V. The output voltage detector is for channel 1 and is set to 2.9 V. An external capacitor is used to set the duration of this reset signal. Other features include short circuit protection and thermal shutdown protection. The NCP4672 has been designed to work with a 4.7 μF output capacitor having an ESR between 0.1 Ω and 5.0 Ω .

- Accuracy: 2% at Full Voltage and Load
- Excellent Ripple Rejection: 70 dB @ 1 kHz
- Voltage Detector for Input Voltage
- Voltage Detector for Output Voltage
- Programmable Delay of Reset Signal
- Thermal Short Circuit Protection
- This is a Pb-Free Device

Typical Application

- Small Core and I/O Power
- Consumer Equipment
- Measurement Equipment
- Industrial Equipment

PIN DESCRIPTION

Pin Number	Symbol	Description
1	V _{in RST}	Open–collector, active–low output of the input voltage detector with hysteresis. Threshold levels are typical 7.0 V/ 7.35 V at $V_{\rm CC}$ pin.
2	V _{o RST}	Active–low output of the reset generator. Reset generator is based on sensing of the V_{out1} voltage. Sensing is with hysteresis – threshold levels are typically 2.9 V/ 2.95 V at V_{out1} . Reset is generated at rising edge of the V_{out1} and it's duration is set by external capacitor connected to C_D pin.
3	C _D	Programmable delay of the reset generator. Delay is adjusted by inserting a capacitor between C_D and GND (typically 10 ms for 10 nF capacitor).
4	V _{CC}	Supply Voltage
5	V _{out2}	1.8 V/ 80 mA LDO Regulator Output
6	GND2	Ground for V _{out2} (internally connected with GND1)
7	GND1	Ground for V _{out1} (internally connected with GND2)
8	V _{out1}	3.5 V/30 mA LDO Regulator Output

This device series contains ESD protection and exceeds the following tests:
 Human Body Model 2000 V per MIL-STD-883, Method 3015
 Machine Model Method 200 V.

- 3. The maximum package power dissipation is: $P_D = \frac{T_J(max) T_A}{R_{O,LA}}$
- 4. Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible. 5. Refer to Figure 3. 6. Guaranteed by design.
