NDT014L N-Channel Logic Level Enhancement Mode Field Effect Transistor

General Description

These N-Channel logic level enhancement mode power field effect transistors are produced using ON Semiconductor's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulses in the avalanche and commutation modes. These devices are particularly suited for low voltage applications such as DC motor control and DC/DC conversion where fast switching, low in-line power loss, and resistance to transients are needed.

Features

- 2.8 A, 60 V. $R_{DS(ON)} = 0.2 \Omega @ V_{GS} = 4.5 \text{ V}$
 $R_{DS(ON)} = 0.16 \Omega @ V_{GS} = 10 \text{ V}$.
- High density cell design for extremely low $R_{DS(ON)}$.
- High power and current handling capability in a widely used surface mount package.

Notes:

1. $P_D(t) = \frac{T_J - T_A}{R_{\theta JA}(t)} = \frac{T_J - T_A}{R_{\theta JC} + R_{\theta CA}(t)} = I_D^2(t) \times R_{DS(ON)@T_J}$ $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JC}$ is guaranteed by design while $R_{\theta CA}$ is defined by users. For general reference: Applications on 4.5"x5" FR-4 PCB under still air environment, typical $R_{\theta JA}$ is found to be:

- 42°C/W with 1 in² of 2 oz copper mounting pad.
- 95°C/W with 0.066 in² of 2 oz copper mounting pad.
- 110°C/W with 0.0123 in² of 2 oz copper mounting pad.

Remark: Thermal characterization performed under the conditions of Note 1c. Should better thermal design employs, $R_{\theta JA}$ will be lower and reach thermal equivalent sooner.

SOT-223 Tape and Reel Data and Package Dimensions

SOT-223 Packaging Configuration: Figure 1.0

Packaging Description:

SOT-223 parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Heat Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 2,500 units per 13" or 330cm diameter reel. The reels are dark blue in color and is made of polystyrene plastic (anti-static coated). Other option comes in 500 units per 7" or 177cm diameter reel. This and some other options are further described in the Packaging Information table.

These full reels are individually barcode labeled and placed inside a standard intermediate box (illustrated in figure 1.0) made of recyclable corrugated brown paper. One box contains two reels maximum. And these boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
