NSS40300MDR2G, NSV40300MDR2G

Dual Matched 40 V, 6.0 A, Low $V_{CE(sat)}$ PNP Transistor

These transistors are part of the ON Semiconductor e^2PowerEdge family of Low $V_{CE(sat)}$ transistors. They are assembled to create a pair of devices highly matched in all parameters, including ultra low saturation voltage $V_{CE(sat)}$, high current gain and Base/Emitter turn on voltage.

Typical applications are current mirrors, differential amplifiers, DC−DC converters and power management in portable and battery powered products such as cellular and cordless phones, PDAs, computers, printers, digital cameras and MP3 players. Other applications are low voltage motor controls in mass storage products such as disc drives and tape drives. In the automotive industry they can be used in air bag deployment and in the instrument cluster. The high current gain allows e^2PowerEdge devices to be driven directly from PMU's control outputs, and the Linear Gain (Beta) makes them ideal components in analog amplifiers.

Features

- Current Gain Matching to 10%
- Base Emitter Voltage Matched to 2 mV
- AEC−Q101 Qualified and PPAP Capable
- NSV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements
- These are Pb−Free Devices*
