Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
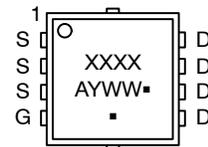

1. The entire application environment impacts the thermal resistance values shown; they are not constants and are valid for the specific conditions noted.
2. Psi (ψ) is used as required per JESD51−12 for packages in which substantially less than 100% of the heat flows to a single case surface.
3. Surface−mounted on FR4 board using 650 mm², 2 oz. Cu Pad.
4. Assumes heat−sink sufficiently large to maintain constant case temperature independent of device power.
5. Continuous DC current rating. Maximum current for pulses as long as one second is higher but dependent on pulse duration and duty cycle.
