STK404-070N-E

Thick-Film Hybrid IC 1ch class-AB Audio Power IC 60W

Overview

The STK404-070N-E is a hybrid IC for the audio power amplifier that mounts discrete components as the audio power amplifier circuit in small space using the original Insulated Metal Substrate Technology IMST. The compact package has been achieved by adopting the low thermal resistance substrate (our conventional model kind ratio).

Application

• Audio Power use

Features

- Pin-to-pin compatible outputs ranging from 60W to 180W
- Miniature package
- Output load impedance: $R_L = 6\Omega$ recommended.
- Allowable load shorted time: 0.3 second
- Allows the use of predesigned applications for standby, mute, and the load short protection circuit.

Selection Guide

| | STK404-070N-E | STK404-120N-E | STK404-140N-E | | |
|---|---------------------|---------------------|---------------------|--|--|
| Output1 (10%/1kHz) | $60W \times 1ch$ | $120W \times 1ch$ | $180W \times 1ch$ | | |
| Output2 (1%/20Hz to 20kHz) | $40W \times 1ch$ | $80W \times 1ch$ | $120W \times 1ch$ | | |
| Maximum rating V_{CC} max (no sig.) | ±46V | ±65V | ±78V | | |
| Maximum rating V _{CC} (6 Ω) | ±39V | ±59V | ±73V | | |
| Recommended operating V _{CC} (6 Ω) | ±30V | ±41V | ±51V | | |
| Package size | 44.0mm×25.6mm×8.5mm | 46.6mm×25.5mm×8.5mm | 59.2mm×25.5mm×8.5mm | | |

Specifications

Absolute Maximum Ratings at $Ta = 25^{\circ}C$, $Tc = 25^{\circ}C$ unless otherwise specified

| Parameter | Symbol | Conditions | Ratings | Unit |
|--|----------------------|--|-------------|------|
| Power supply voltage 1 | V _{CC} max1 | Non-signal | ±46 | V |
| Power supply voltage 2 | V _{CC} max2 | Signal, $R_L = 6\Omega$ | ±39 | V |
| Thermal resistance | өј-с | Per one power transistor | 3.0 | °C/W |
| Junction temperature | Tj max | | 150 | °C |
| Operating substrate temperature | Tc max | | 125 | °C |
| Storage temperature | Tstg | | -30 to +125 | °C |
| Allowable time for load short-circuit *3 | ts | $V_{CC} = \pm 28V, R_L = 6\Omega, f = 50Hz$ $P_O = 40W$ | 0.3 | S |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

ORDERING INFORMATION

See detailed ordering and shipping information on page 10 of this data sheet.

| | | Conditions | | | | | | Ratings | | | |
|---------------------------|---------------------------------|------------------------|-----------|-----------------------|------------|---------|------|-----------|------|-------|--|
| Parameter Symbo | | V _{CC} [V] | f [Hz] | P _O [W] | THD [%] | | min | typ | max | Unit | |
| Output power | P _O 1 | ±30 | 20 to 20k | | 0.4 | | 40 | | | | |
| | P _O 2 | ±30 | 1k | | 10 | | 60 | | | W | |
| Frequency characteristics | f _L , f _H | ±30 | | 1.0 | | +0 -3dB | | 20 to 20k | | Hz | |
| Input impedance | ri | ±30 | 1k | 1.0 | | | | 55 | | kΩ | |
| Output noise voltage *2 | V _{NO} | ±36 | | | | Rg=10kΩ | | 1.2 | | mVrms | |
| Output neutral voltage | V _N | ±36 | | | | | -100 | 0 | +100 | mV | |
| Quiescent current | Icco | ±36 | | | | No load | 4 | | 14 | mA | |

Operating Characteristics at $Tc = 25^{\circ}C$, $R_{L} = 6\Omega$ (Non-inductive load), $Rg = 600\Omega$, VG = 30dB

[Note]

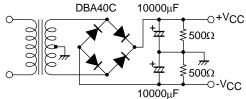

*1. All tests are measured using a constant-voltage supply unless otherwise specified.

*2. The output noise voltage is peak value of an average-reading meter with a rms value scale (VTVM). A regulated AC supply (50Hz) should be used to eliminate the effects of AC primary line flicker noise.

*3. Allowable time for load short-circuit and output noise voltage are measured using the specified transformer power supply. About the load short circuit, it is designed assuming protecting by cut-off within 0.3 second.

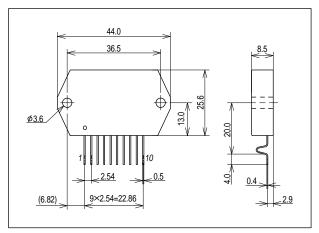

*4. Weight of 1 HIC : (Typ) 10.4g Outer carton dimensions (W×L×H) : 420mm×233mm×277mm

Specified transformer power supply (Equivalent to MG-200)

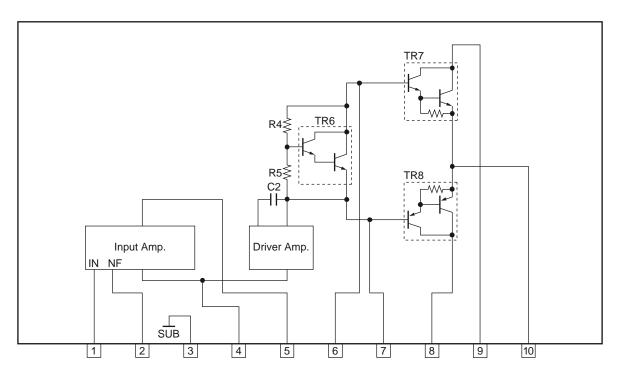

Package Dimensions

unit : mm (typ)

Characteristic of Evaluation Board

A Thermal Design Tip For STK404-070N-E Amplifier

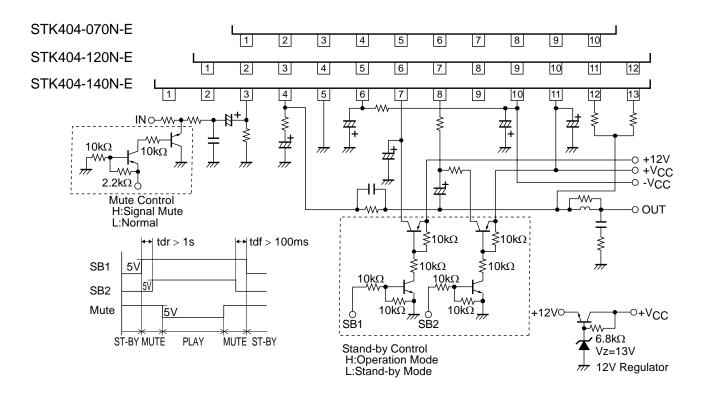

| [Thermal Design Conditions] |
|--|
| The thermal resistance (θ c-a) of the heat-sink which manages the heat dissipation inside the Hybrid IC will be determined as follow: |
| (Condition 1) The case temperature (Tc) of the Hybrid IC should not exceed 125°C |
| $Pd \times \theta c a + Ta < 125^{\circ}C $ (1) |
| Where Ta : the ambient temperature for the system |
| (Condition 2) The junction temperature of each power transistor should not exceed 150°C |
| $Pd \times \theta c - a + Pd/N \times \theta j - c + Ta < 150^{\circ}C $ (2) |
| Where N : the number of transistors (two for 1 channel, ten for channel) |
| θ j-c : the thermal resistance of each transistor (see specification) |
| Note that the power consumption of each power transistor is assumed to be equal to the total power dissipation (Pd) |
| divided by the number of transistors (N). |
| From the formula (1) and (2), we will obtain: |
| $\theta c-a < (125 - Ta)/Pd$ (1) |
| $\theta c-a < (150 - Ta)/Pd - \theta j-c/N$ (2) |
| The value which satisfies above formula (1)' and (2)' will be the thermal resistance for a desired heat-sink. |
| Note that all of the component except power transistors employed in the Hybrid IC comply with above conditions. |
| |
| [Example of Thermal Design] |
| Generally, the power consumption of actual music signals are being estimated by the continuous signal of |
| $1/8 P_{O}$ max. (Note that the value of $1/8 P_{O}$ max may be varied from the country to country.) |
| (Sample of STK404-070N-E; 40W×1ch) |
| If V _{CC} is $\pm 30V$, and R _L is 6 Ω , then the total power dissipation (Pd) of inside Hybrid IC is as follow; |
| $Pd = 19.6W$ (at 5W output power, 1/8 of P_O max) There are two (2) transistors in Audio Section of this Unbrid IC, and thermal resiston of (0) of each transistors is |
| There are two (2) transistors in Audio Section of this Hybrid IC, and thermal resistance (θ_j -c) of each transistor is 2.0%C/W. If the embiant term embrand (Te) is guaranteed for 50%C, then the thermal resistance (θ_i -c) of each transistor is |
| 3.0°C/W. If the ambient temperature (Ta) is guaranteed for 50°C, then the thermal resistance (θ c-a) of a desired heat- sink should be; |
| |
| From (1)' $\theta c - a < (125 - 50)/19.6$ < 3.83 |
| From (2)' $\theta c - a < (150 - 50)/19.6 - 3.0/2$ |
| 1001(2) = 000 (100 - 00)(100 - 00)(2) |

Therefore, in order to satisfy both (1)' and (2)', the thermal resistance of a desired Heat-sink will be 3.60°C/W.

[Note]

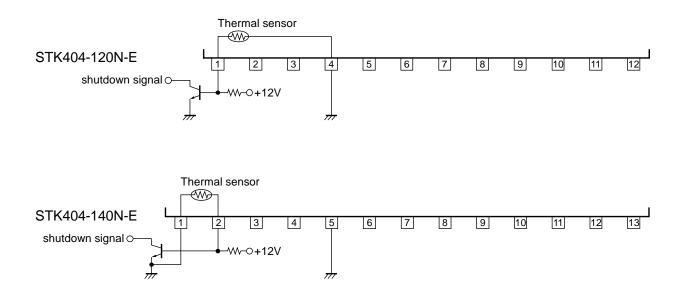

Above are reference only. The samples are operated with a constant power supply. Please verify the conditions when your system is actually implemented.
