# Low Voltage Precision Adjustable Shunt Regulator

# TLV431, NCV431, SCV431

The TLV431A, B and C series are precision low voltage shunt regulators that are programmable over a wide voltage range of 1.24 V to 16 V. The TLV431A series features a guaranteed reference accuracy of  $\pm 1.0\%$  at 25°C and  $\pm 2.0\%$  over the entire industrial temperature range of -40°C to 85°C. The TLV431B series features higher reference accuracy of  $\pm 0.5\%$  and  $\pm 1.0\%$  respectively. For the TLV431C series, the accuracy is even higher. It is  $\pm 0.2\%$  and  $\pm 1.0\%$  respectively. These devices exhibit a sharp low current turn-on characteristic with a low dynamic impedance of 0.20  $\Omega$  over an operating current range of 100  $\mu$ A to 20 mA. This combination of features makes this series an excellent replacement for zener diodes in numerous applications circuits that require a precise reference voltage. When combined with an optocoupler, the TLV431A/B/C can be used as an error amplifier for controlling the feedback loop in isolated low output voltage (3.0 V to 3.3 V) switching power supplies. These devices are available in economical TO-92-3 and micro size TSOP-5 and SOT-23-3 packages.

#### **Features**

- Programmable Output Voltage Range of 1.24 V to 16 V
- Voltage Reference Tolerance ±1.0% for A Series, ±0.5% for B Series and ±0.2% for C Series
- Sharp Low Current Turn-On Characteristic
- Low Dynamic Output Impedance of 0.20  $\Omega$  from 100  $\mu$ A to 20 mA
- Wide Operating Current Range of 50 μA to 20 mA
- Micro Miniature TSOP-5, SOT-23-3 and TO-92-3 Packages
- NCV and SCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These are Pb-Free and Halide-Free Devices

## **Applications**

- Low Output Voltage (3.0 V to 3.3 V) Switching Power Supply Error Amplifier
- Adjustable Voltage or Current Linear and Switching Power Supplies
- Voltage Monitoring
- Current Source and Sink Circuits
- Analog and Digital Circuits Requiring Precision References
- Low Voltage Zener Diode Replacements

Figures 18 and 19 show the stability boundaries and circuit configurations for the worst case conditions with the load capacitance mounted as close as possible to the device. The required load capacitance for stable operation can vary depending on the operating temperature and capacitor

equivalent series resistance (ESR). Ceramic or tantalum surface mount capacitors are recommended for both temperature and ESR. The application circuit stability should be verified over the anticipated operating current and temperature ranges.

The above circuit shows the TLV431A/B/C as a compensated amplifier controlling the feedback loop of an isolated output line powered switching regulator. The output voltage is programmed to 3.3 V by the resistors values selected for R1 and R2. The minimum output voltage that can be programmed with this circuit is 2.64 V, and is limited by the sum of the reference voltage (1.24 V) and the forward drop of the optocoupler light emitting diode (1.4 V). Capacitor C1 provides loop compensation.
