2. Instructions

The OR-3120/OR-3150 consists of an LED optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate-controlled devices. The voltage and current supplied by this optocoupler makes it ideally suited for directly driving IGBTs with ratings up to 1200V/50A.

3. Application Range

- IGBT/MOSFET gate drive
- AC/Brushless DC motor drives
- Industrial inverters
- Switch mode power supplies
