## Panasonic ideas for life

AJ7 switch 10A type Standard actuator

AJ7 switch 10A type Wide actuator

AJ7 switch 6A type

POWER ROCKER SWITCH

## FEATURES

## 1. Power rocker switches for safety requirements.

- All versions comply with ClassII EN61058-1 insulation grade. Insulation distance: 8 mm Min.
Contact gap: 3mm Min.
- International Standard-approved status

| Already approved |  |  |

3. Operation that only requires a light touch
The best operation characteristics were sought by analyzing touch data gathered by monitoring 1,500 people.

- Power Rocker Switch touch curve

## 4. A broad product line

The AJ7 switches are available with five different types of terminals: quickconnect terminals, soldering terminals, PC board terminals, right angle terminals and left angle terminals.
5. Eight standard actuator colors White, black, red, dark gray, light gray, blue, green, yellow
6. Cadmium-free contact compatibility. 7. TV-5 rating type added to lineup

## PRECAUTIONS WHEN USING CADMIUM-FREE CONTACT TYPE

Models with cadmium-free contacts have been introduced in order to reduce environmentally harmful substances. (" F " is affixed to the end of the part number.) We ask customers who are currently using products with cadmium-containing contacts (no " $F$ " at the end of the part number) to please make the switch to models with cadmium-free contacts. When switching, operating life may differ depending on the load. Please be sure to verify this by conducting an evaluation using actual equipment.

## NOTES

## 1. Switch mounting

Mount the switch with the hole cutting dimensions shown in the dimensions. Contact us if you are considering using a panel of other than the recommended size and shape.

## 2. Regarding fastening lead wires to terminals

1) When connecting the tab terminals, use a . 187 Quick-connect and insert the terminals straight in.
If they are skewed, the terminals will require excessive insertion force.
In addition, there is some variation in the insertion force required for different receptacles from different manufacturers, so confirm how much force is needed under actual conditions.
Do not solder wires onto tab terminals.
2) With manual soldering: Complete the soldering connection work within 3 seconds with the tip of the soldering iron (60W soldering iron) at a temperature of $420^{\circ} \mathrm{C}$ or lower, and take care not to apply any force to the terminal area.

Avoid touching the switch with soldering iron.

Refer to the diagram above, "soldering position," for details on the position where a wire should be soldered to a terminal. When soldering PC board terminals, keep soldering time to within 5 s at $270^{\circ} \mathrm{C}$ soldering bath or within 3 s at $350^{\circ} \mathrm{C}$ soldering bath.
3) The terminals should be connected in such a way that they are not under constant stress from the connecting wires.
4) Terminal material is copper alloy which may discolor due to finger's oil or after a long time. But that discoloration does not effect actual performance.

## 3. Resistance to chemicals

To clean the switch unit, use a neutral detergent diluted with water.
Do not use acidic or alkaline solvents as they may damage the switch.
Furthermore, be careful not to get any of the detergent solution inside of the switch while cleaning it.

## 4. Environment

Avoid using and storing these switches in a location where they will be exposed to corrosive gases, silicon, or high dust levels, all of which can have an adverse effect on the contacts.
5. Take care not to drop the product as it may impair perfomance.

## REFERENCE

1. Outline of UL1054 test

Overload test AJ7: 15A 250V AC
(Power factor 0.75 to 0.8 )
50 operation
Endurance test AJ7: 10A 250V AC
(Power factor 0.75 to 0.8)
$6 \times 10^{3}$ operation
After testing, temperature rise of terminals should be less than $30^{\circ} \mathrm{C}$ and no abnormality should be observed in characteristics.

## 2. Outline of EN61058-1 test

After switching $5 \times 10^{3}$ times on the below load condition at both $85^{+5}{ }_{6}^{\circ} \mathrm{C}$ and $25 \pm 10^{\circ} \mathrm{C}$, temperature rise of terminals should be less than $55^{\circ} \mathrm{C}$ and no abnormality should be observed in characteristics.

## INTRODUCTION TO 4P CONNECTORS FOR THE AJ7 SWITCH

 (produced by Nippon Tanshi co., Ltd)

Notes) This AJ7 switch connector is not available from Matsushita Electric Works. Contact us for further details on this connector.

Suitable switches: AJ7 switch, . 187 Quick-connect terminal
(Note: Terminal guard long type switches are not suitable for this connector.)
