

Short circuit protection (Non-latch type) only for DC load	PhotoMOS® GU 1 Form A Short Circuit Protection (AQV112KL)
---	--

RoHS compliant

FEATURES

- 1. Protects Circuit from excess current**
The short circuit protection function prevents the continued flow of short current. After short current is detected, load current is monitored, and if the load returns to normal, the device returns to normal operation.
- 2. No need for fuses, polyswitches, or other protectors**
The built-in short circuit protection function eliminates the need for overcurrent protectors, reducing mounting costs and space requirements.
- 3. High capacity**
Can control up to 0.5A (60V DC) load current.

TYPICAL APPLICATIONS

- Industrial equipment
- Security equipment

What is short circuit protection Non-latch type?

If the load current reaches a predetermined overcurrent level, the output-side short circuit protection function cuts off the load current. It then monitors the load current, and if it returns to normal, automatically recovers to normal device operation.

In order to operate the short circuit protection function, ensure that the input current is at least $I_F = 10 \text{ mA}$.
