High Reliability Relay for Various Applications

DS RELAYS

## FEATURES

1. Breakthrough height of 9.8 mm .386 inch beats the $\mathbf{1 0} \mathbf{~ m m} .394$ inch limit 1 c and 2 c all have the same height ( 9.8 mm .386 inch). The width of the relay is also the same ( 9.9 mm .390 inch). Since the only size variable is the length, the shared form makes mounting on printed printing wiring boards easy.
2. Suitable for use in difficult environments
Epoxy resin seals the parts and cut off the external atmosphere, thus enabling use in difficult environments.
3. Can be used with automatic solder and automatic wash systems Automatic soldering and automatic washing can be carried out once the parts are mounted on PC boards.
4. Gold-clad twin contacts ensure high reliability
Highly stable gold cladding on the contacts ensures that contact resistance changes little over time. Furthermore, the use of twin contacts, a configuration that performs with superior contact reliability, ensures extremely low contact failure rates even under low level loads.
5. Polarized magnetic circuits realize resistance to shock and vibration High-performance polarized magnetic circuits that utilize the energy of permanent magnets have made it possible to create relays with strong resistance to shock and vibration.
6. DIL terminal array enables use of IC sockets
7. Widening scope of application with multicontact latching
In addition to single side stable types, you can take advantage of the memory of functions of convenient 2 coil latching relays.

## TYPICAL APPLICATIONS

Besides telecommunications, measuring devices, office equipment, computers and related equipment, DS relays are also recommended for a broad range of applications including business devices, audio systems, and industrial equipment.

## NOTES

1. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

For general cautions for use, please refer to the "Cautions for use of Signal Relays" or "General Application Guidelines".
