## Panasonic ideas for life

## RoHS compliant

## FEATURES

1. Compact with high contact rating

Even with small $10 \mathrm{~mm} .394 \mathrm{inch}(\mathrm{H}) \mathrm{x}$ 11 mm .433 inch (W) x 20 mm .787
inch (L) (dimensions, high capacity switching is provided: 1a, 8 A 250 V AC; 2a and 1a1b, 5 A 250 V AC.
2. High switching capability High contact pressure, low contact bounce, and wiping operation improve resistance to weld bonding. Resistant against lamp load and dielectric loading: 1a achieves maximum switching capacity of $2,000 \mathrm{VA}$ (8A 250 V AC).

## 3. High sensitivity

Using the same type of highperformance polar magnetic circuits as DS relays, by matching the spring load to the magnetic force of attraction, greater sensitivity has been achieved. The resultant pick up sensitivity of about 190 mW makes possible direct driving of transistors and chips.
4. High breakdown voltage

Breakdown voltage has been raised by keeping the coil and contacts separate.

| Between contact <br> and coil | Between contacts |
| :---: | :---: |
| $3,000 ~ \mathrm{Vrms}$ for 1 min. <br> $5,000 \mathrm{~V}$ surge <br> breakdown voltage | $1,000 \mathrm{Vrms}$ for 1 min. <br> $1,500 \mathrm{~V}$ surge <br> breakdown voltage |
| Conforms with FCC Part 68 |  |

## 5. Latching types available

## 6. Wide variation

Three types of contact arrangement are offered: 1a, 2a, and 1a1b. In addition, each is available in standard and reversed polarity types.
7. Sealed construction allows automatic washing.
8. Complies with safety standards Complies with Japan Electrical Appliance and Material Safety Law requirements for operating 200 V power supply circuits, and complies with UL, CSA, and TÜV safety standards.
9. Sockets are available.

## NOTES

## 1. Soldering conditions

Please obey the following conditions when soldering automatically.

1) Preheating: Within $120^{\circ} \mathrm{C} 248^{\circ} \mathrm{F}$ and within 120 seconds
2) Soldering iron: $260^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$
$500^{\circ} \mathrm{F} \pm 41^{\circ} \mathrm{F}$ and within 6 seconds

## 2. Cleaning

For automatic cleaning, the boiling method is recommended. Avoid ultrasonic cleaning which subjects the relays to high frequency vibrations, which may cause the contacts to stick. It is recommended that a fluorinated hydrocarbon or other alcoholic solvents be used.

## 3. External magnetic field

Since DY relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

## 4. Coil operating power

Pure DC current should be applied to the coil. The wave form should be rectangular. If it includes ripple, the ripple factor should be less than $5 \%$. However, check it with the actual circuit since the characteristics may be slightly different.
5. When using, please be aware that the a contact and $b$ contact sides of 1 Form A and 1 Form B types may go on simultaneously at operate time and release time.

For Cautions for Use.
