## Wi-Fi Dual Band 2.4 GHz/5 GHz and Bluetooth® Module Product Specification

Rev. 1.1

## Overview

The PAN9028 is a 2.4 GHz and 5 GHz ISM band Wi-Fi and Bluetooth radio module, which includes a wireless radio and a power management IC for easy integration of Wi-Fi and Bluetooth connectivity into various electronic devices.

- Coexistence interface for arbitration of co-located WLAN, Bluetooth, or mobile wireless system (e.g. LTE or ZigBee®)
- Generic interfaces include SDIO 3.0 and high-speed UART for host processor connection
- Software driver Linux®

## Features

- Dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac Wi-Fi/Bluetooth combo module
- Supports 802.11i security standards through AES, CCMP, and more security mechanism
- 802.11e Quality of Service is supported for multimedia application
- IEEE 802.11ac (Wave 2), 1x1 spatial stream with data rates up to 433 Mbps (MCS9, 80 MHz channel bandwidth)
- IEEE 802.11ac MU-MIMO beamformee
- Bluetooth 5 (includes Low Energy)
- Dual simultaneous and independent WLAN and Bluetooth operation
- Dynamic Rapid Channel Switching (DRCS) for simultaneous operation in 2.4 GHz and 5 GHz bands
- Indoor location and navigation with IEEE 802.11mc

## Characteristics

- Surface Mount Type (SMT)  
24 mm × 12 mm × 2.8 mm
- NXP® 88W8987 WLAN 2.4 GHz and 5 GHz and Bluetooth single-chip solution inside
- Single power supply: 3.3 V with Marvell® 88PG823 Power Management IC (optional)
- Tx power: 16 dBm at 802.11b
- Rx sensitivity: -97 dBm at 802.11b DSSS 1 Mbps
- IEEE 802.11ac 20 MHz, 40 MHz, 80 MHz channel bandwidth
- Long and Short Guard Interval support
- Current consumption Wi-Fi typical 320 mA (at Tx) and 70 mA (at Rx)
- SDIO 1 bit or 4 bit
- Wide temperature range of -30 °C to 85 °C

This Product Specification does not lodge the claim to be complete and free of mistakes.

## Document Acceptance

By signing the Product Specification, you acknowledge that you are a legal representative for your company and that you understand and accept the validity of the contents herein.

If the signed version of the Product Specification has not been returned to Panasonic within 30 days after receipt of the product, the specification or approval sheet shall be deemed to be accepted by you.

## Engineering Samples (ES)

If Engineering Samples are delivered to the customer, these samples have the status "Engineering Samples". This means that the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and they may differ from the published Product Specification.

Engineering Samples are not qualified and they are not to be used for reliability testing or series production.

## Disclaimer

The customer acknowledges that samples may deviate from the Product Specification and may bear defects due to their status of development and the lack of qualification mentioned above.

Panasonic rejects any liability or product warranty for Engineering Samples. In particular, Panasonic disclaims liability for damages caused by:

- The use of the Engineering Sample other than for evaluation purposes, particularly the installation or integration in another product to be sold by the customer,
- Deviation or lapse in function of the Engineering Sample,
- Improper use of the Engineering Sample.

Panasonic Industrial Devices Europe GmbH disclaims any liability for consequential and incidental damages. In case of any queries regarding the Engineering Samples, please contact your local sales partner or the related product manager.

## Information on Software

The PAN9028 module does not contain any software ex works, i.e. software is provided by 3rd party suppliers only. The essential software resources can be found on the partner website of NXP Semiconductors <https://www.nxp.com/>.

PIDEU provides a factory software programming service for your customized firmware; for further information please reach out to your local sales contact this regarding ⇒ [7.2.1 Contact Us](#).

# 1 About This Document

## 1.1 Purpose and Audience

This Product Specification provides details on the functional, operational, and electrical characteristics of the Panasonic PAN9028 module. It is intended for hardware design, application, and Original Equipment Manufacturers (OEM) engineers. The product is referred to as “the PAN9028” or “the module” within this document. Unless otherwise stated the data in this document is valid for all module variants.

## 1.2 Revision History

Revision	Date	Modifications/Remarks
0.1	2017-09-15	First preliminary version
0.2	2020-08-28	New design. Added CPU frequencies, chapter “Restricted End Use”, additional module and kit variants and versions, second module variant without PMIC and 32 kHz, module specific parameters, MR variant. Changed storage temperature.  Updated disclaimer, product overview, chapter “Overview”, block diagram. Formal changes.
1.0	2021-08-24	Updated picture “Block Diagram”. Updated disclaimer. Updated features. Added regulatory chapter. Updated ordering information.
1.1	2021-08-26	Changed regulatory chapter. Updated Layout

## 1.3 Use of Symbols

## 2 Overview

The PAN9028 is a dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac Wi-Fi radio module with integrated Bluetooth BR/EDR/Low Energy (LE), specifically designed for highly integrated and cost-effective applications. The simultaneous and independent operation of the two standards enables very high data rates (802.11ac) and low-power operation (Bluetooth LE). Integrated power management, a fast dual-core CPU, 802.11i security standard support, and high-speed data interfaces deliver the performance for the speed, reliability, and quality requirements of next generation products. Tx power calibration data, Wi-Fi, and Bluetooth system parameters are pre-stored on the one-time-programmable memory of the PAN9028 during production at Panasonic. This simplifies passing the certification process for PAN9028 customers. Furthermore, the module reduces design, test, and calibration effort resulting in reduced time-to-market compared to discrete solutions.

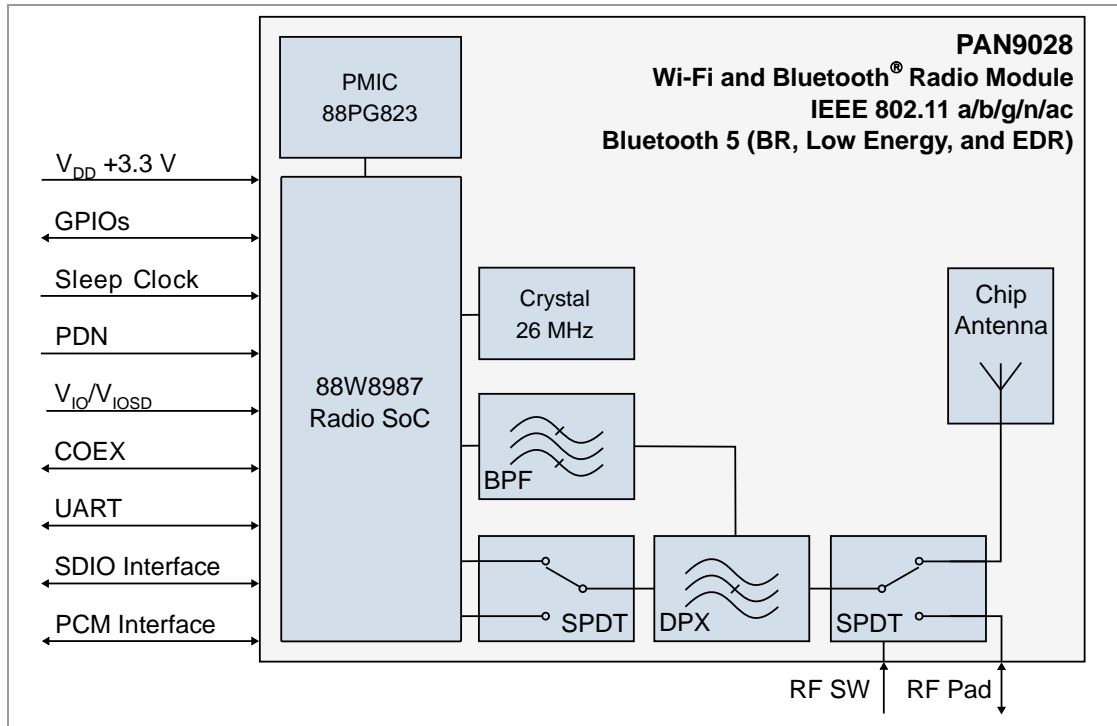

Integrating Wi-Fi and Bluetooth wireless connectivity allows high throughput applications for industrial devices and appliances. The combination of Wi-Fi and Bluetooth provides the highest flexibility for connectivity.

## Control Pin Function for all Module Variants

The control pin is used as configuration input to set parameters following a reset. The definition of the pin changes immediately after a reset to its usual function. To set a configuration bit to “0”, attach a 50 kΩ to 100 kΩ resistor from the pin to ground. No external circuitry is required to set a configuration bit to “1”.

The configuration of the control pin is used for the firmware boot option. The software reads and boots accordingly.

No.	Pin Name	Pin Type	Strap Value	WLAN	Bluetooth/ Bluetooth LE	Firmware Download		Number SDIO Functions

## 2.3 Host Interface

The bus interface connects several host interface bus units to the CPU bus of the device through the internal bus. The connection of each unit is multiplexed with other bus units.

The high-speed UART interface is connected to the CPU bus through a separate bus.

Type	Features
High-speed UART interface	<p>The device supports a high-speed Universal Asynchronous Receiver/Transmitter (UART) interface, compliant with the industry standard 16550 specification.</p> <ul style="list-style-type: none"> <li>• FIFO mode permanently selected for transmit and receive operations</li> <li>• Two pins for transmit and receive operations</li> <li>• Two flow control pins</li> <li>• Interrupt triggers for low-power, high throughput operation</li> </ul>
SDIO interface	<p>The device supports an SDIO device interface that conforms to the industry standard SDIO full-speed card specification and allows a host controller using the SDIO bus protocol to access the device.</p> <ul style="list-style-type: none"> <li>• Supports SDIO 3.0 Standard</li> <li>• 1-bit SDIO or 4-bit SDIO transfer modes with full clock range up to 208 MHz</li> <li>• On-chip memory used for CIS</li> <li>• Special interrupt register for information exchange</li> <li>• Allows card to interrupt host</li> </ul>

For further information please refer to [⇒ 4.10.1 Host Interface](#).

## 2.4 Peripheral Bus Interfaces

The Peripheral Bus Unit (PBU) connects several low speed peripherals to the internal bus of the device. The device consists of the GPIO Interface and the One Time Programmable Memory (OTP).

Type	Features
General Purpose I/O (GPIO) Interface	<ul style="list-style-type: none"> <li>• User-defined GPIOs (each configured to either input or output)</li> <li>• Each GPIO controlled independently</li> <li>• Each I/O configurable to output bit from GPIO_OUT</li> </ul>
One Time Programmable Memory (OTP)	<ul style="list-style-type: none"> <li>• Storing device-specific calibration data and hardware information like MAC/BD address, WLAN, and Bluetooth parameters</li> <li>• Programmed during production process of device</li> <li>• Device performs calibration when it is powered up</li> </ul>

For further information please refer to [⇒ 4.10.2 Peripheral Interface](#).

## 2.5 PCM Interfaces

The device supports the PCM interface.

Type	Features
PCM Interface	<ul style="list-style-type: none"> <li>• Master or slave mode</li> <li>• PCM bit width size of 8 bits or 16 bits</li> <li>• Up to four slots with configurable bit width and start positions</li> <li>• Short frame and long frame synchronization</li> </ul>

For further information please refer to [⇒ 4.10.3 Audio Interface](#).

## 2.6 Coexistence

The implemented coexistence framework is based on the IEEE 802.15.2 recommended practice Packet Traffic Arbitration (PTA) scheme and the Bluetooth Special Interest Group (Bluetooth) Core Specification Volume 7 (Wireless Coexistence Volume).

### 2.6.1 WLAN and Bluetooth Channel Information Exchange

Since Bluetooth and IEEE 802.11b/g/n WLAN use the same 2.4 GHz frequency band, each can cause interference with the other. The level of interference depends on the respective frequency channel used by Bluetooth and WLAN (other factors can impact interference, like Tx power and Rx sensitivity of the device).

In a system with both Bluetooth and WLAN, the common host receives information about WLAN channel usage and passes the information to the Bluetooth device. For Bluetooth 1.2 devices with Adaptive Frequency Hopping (AFH) enabled, the Bluetooth device can block channel usage that overlaps the WLAN channel in use.

When the Bluetooth device avoids all channels used by the WLAN, the impact of interference is reduced, but not completely eliminated. For Bluetooth 1.1 devices, the Bluetooth device cannot block WLAN channel usage. In this case, a Bluetooth Coexistence Arbiter (BCA) scheme at MAC level is required. The BCA scheme can also be used with Bluetooth 1.2 devices to further reduce the impact of interference to a minimum.

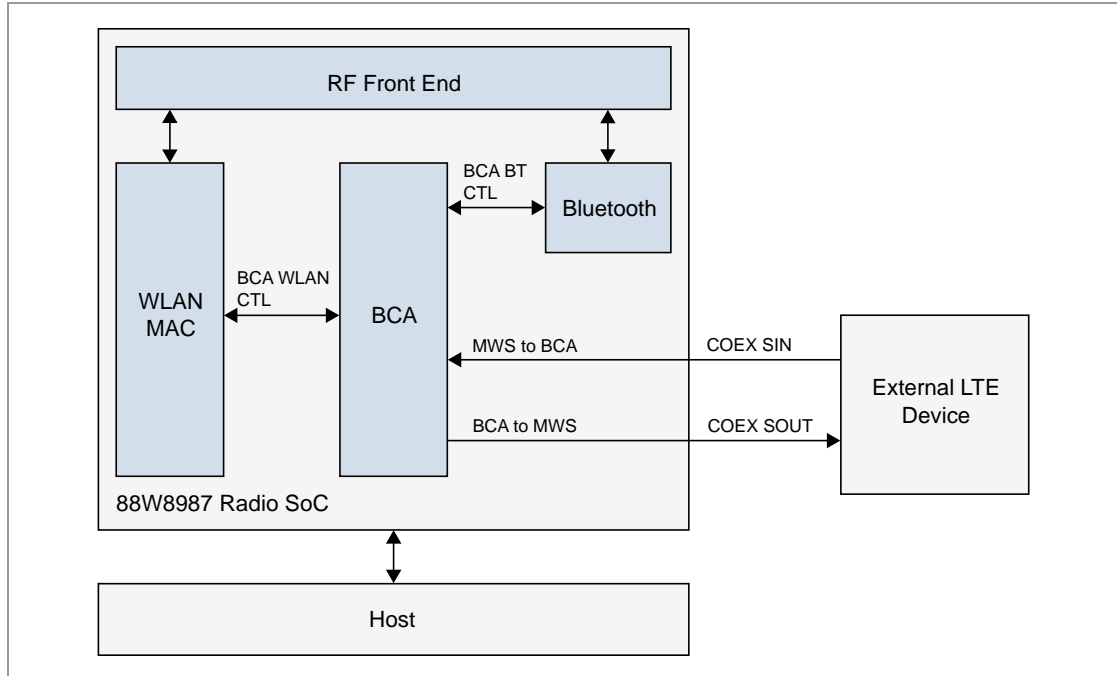

### 2.6.2 External Mobile Wireless System (LTE or ZigBee) and BCA Exchange

Based on the Bluetooth SIG Wireless Coexistence Volume, the device supports a Wireless Coexistence Interface 2 (WCI-2) protocol for WLAN/Bluetooth coexistence with an external Mobile Wireless System (MWS), such as a Long Term Evolution (LTE) or ZigBee device.

WCI-2 is a 2-wire transport interface. An internal coexistence is used to exchange request/grant with the BCA.

### 2.6.3 System Configuration

#### External MWS Device

### 2.6.4 WCI-2 Interface

The coexistence interface includes a Mobile Wireless System (MWS) transport controller to accommodate a 2-wire, UART-based serial transport interface. This interface is a standard full-duplex UART (TxD and RxD) carrying logical signals framed as UART characters. In addition, it allows support of multiple logical channels.

#### Interface Signals

Pin No.	Signal Name	Specification Name	Pin Type	Description
F5	COEX_SIN	RxD	Input	Serial data from external MWS device
B10	COEX_SOUT	TxD	Output	Serial data to external MWS device

## Signal Waveform Format

The messaging is based on a standard UART format. The UART signals should be connected like a null-modem. For example, the local TXD connected to the remote RXD and vice versa.

## Interface Transport Settings

Item	Range	Comment
Baudrate	921 600 ~ 4 000 000	Baud
Data Bits	8	LSB first
Parity Bits	0	No parity
Stop Bit	1	One stop bit
Flow Control	No	No flow control

## Support Baud Rates

Baud			
921 600	2 000 000	3 000 000	4 000 000

## Real-Time Signaling Message

The real-time signaling message is used to transport real-time signals over the 2-wire transport interface.

The real-time signaling message conveys the real-time signals (Bluetooth Core Specification, Volume 7, Part A) in one message. The time reference point for the real-time signaling message is the end of message bit 5 (transition to stop bit).

Defined real-time signaling messages include:

- Coexistence Controller to MWS device
- MWS device to Coexistence Controller

Real-Time Signaling	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS to Coexistence Controller (Signal)	FRAME_SYNC	MWS_RX	MWS_TX	PATTERN [0]	PATTERN [1]
Coexistence Controller to MWS (Message)	BLUETOOTH_RX_PRI	BLUETOOTH_TX_ON	802_RX_PRI	802_TX_ON	RFU

Signal Name
FRAME_SYNC
MWS_RX
MWS_TX
PATTERN [1, 0]
BT_RX_PRI
BT_TX_ON
802_RX_PRI
802_TX_ON
MWS_INACTIVITY_DURATION
MWS_SCAN_FREQUENCY_OFFSET

## Transport Control Message

The transport control messages can modify the state and request state information of the MWS coexistence interface.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Transport Control Message	RESEND_REAL_TIME	RFU	RFU	RFU	RFU

Signal Name	Description
RESEND_REAL_TIME	<p>This bit is set if a device wants to get a status update of the real-time signals. The signal is usually used after wake-up from sleep of the transport interface to get an update of the real-time signals.</p> <p>If the receiving device's transport interface is awake it shall send a real-time message with the current status of the real-time signals within 4 UART character period. If the signal is not transmitted within 4 UART character periods, the device is considered asleep.</p> <p>If the receiving device's transport interface is not awake it shall not send a real-time message.</p> <p><b>Bluetooth initiated:</b> If the MWS is currently scanning or has an ongoing inactivity duration, the MWS shall send a frequency scan message or an inactivity duration message after transmitting the real-time message.</p> <p>If the receiving device's transport interface is not awake it shall not send a frequency scan or inactivity duration message.</p>

### Transparent Data Message

The transparent control messages can modify the state and request state information of the MWS coexistence interface.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Transparent Data Message	NIBBLE_POSITION	DATA [0]/[4]	DATA [1]/[5]	DATA [2]/[6]	DATA [3]/[7]

Signal Name	Description
NIBBLE_POSITION	0 = least significant nibble 1 = most significant nibble
DATA[n]; n=0 .. 7	Data bits of the message octet

### MWS Inactivity Duration Message

The inactivity duration messages is used to send the MWS\_INACTIVITY\_DURATION signal from the MWS device to the Coexistence Controller.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Inactivity Duration Message	DURATION [0]	DURATION [1]	DURATION [2]	DURATION [3]	DURATION [4]

The idle duration is encoded in 5 bits given by the formula:

$$\text{Inactivity\_Duration} = \text{DURATION} \cdot 5 \text{ ms}$$

Inactivity durations smaller than 5 ms are not communicated.

If all bits are set to “1” the inactivity duration is infinite. If all bits are set to “0” or MWS\_RX or MWS\_TX are set to “1”, the inactivity period ends.

### MWS Scan Frequency Offset Message

The MWS scan frequency offset message is used to send the MWS\_SCAN\_FREQUENCY\_OFFSET signal from the MWS device to the Coexistence Controller.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Scan Frequency Offset	BAND	FREQ [0]	FREQ [1]	FREQ [2]	FREQ [3]

The RF scan frequency is encoded in 5 bits given by the formula:

$$\text{RF\_FREQ\_OFFSET} = \text{FREQ} \cdot 10 \text{ MHz}$$

If BAND is set to “0” the RF\_FREQ\_OFFSET is the negative value from the lower edge of the ISM band and if BAND is set to “1”, RF\_FREQ\_OFFSET is the positive value from the top edge of the ISM band.

FREQ set to all “0” indicates the end of the scan period.

## 2.6.5 Bluetooth Coexistence Arbiter

Type	Features

<p>Transaction Stopping</p>	<p>The arbiter allows control of what transfers can be stopped after an initial grant. If allowed, a transaction can be stopped for higher priority request. A transaction stop decision is a function of the decision policies and transaction stopping control. The transaction stopping control is configurable per device and direction.</p>

### 2.6.6 Bluetooth Capability

Type	Features
Request Schemes	<p>The PTA signals are directly controlled by the hardware to meet timing requirements of the Bluetooth radio. The software controls the type of traffic in priority mode.</p> <p>Mechanisms enforced for control include:</p> <ul style="list-style-type: none"> <li>• Selection of certain types of communication always treated as high priority</li> <li>• Selection of individual frames marked with high priority</li> <li>• Real-time signaling of the next slot marked with high priority</li> <li>• Automatic hardware control based on the grant/denial history of the Bluetooth link</li> </ul>
Timing Control	<p>The PTA signal timing scheme is fully programmable relative to the Bluetooth packet timing.</p>

Queue Classification	<ul style="list-style-type: none"> <li>• Programmable mask allows each transmit queue to be mapped to a priority</li> <li>• Queue-based mapping is optional for software-generated frames only</li> </ul>

### 2.6.8 LTE (MWS) Capability

The device supports a Bluetooth SIG WCI-2 MWS coexistence signaling interface. The coexistence logical signaling is designed to enable a standard interface to allow an MWS device and a Coexistence Controller to exchange information and support cooperative coexistence.

The WCI-2 signals carry time-critical information such as the start point of an MWS frame. The logical coexistence signaling architecture also includes transparent data messaging and vendor specific data messaging mechanism to enable passing information to and from the collocated MWS device and Coexistence Controller when long latency (tens of milliseconds) cannot be tolerated.

For further information please refer to [⇒ 2.6.4 WCI-2 Interface](#).

#### Coexistence Signals

The logical signals assist in time alignment, protecting MWS from interference and maximizing the usability of the Bluetooth radio.

#### Time-Critical Coexistence Signals

Signal Name	Direction
FRAME_SYNC	MWS to Bluetooth
BT_RX_PRI	Bluetooth to MWS
BT_TX_ON	Bluetooth to MWS

MWS_SCAN_FREQUENCY_OFFSET	MWS to Bluetooth
MWS_TX_PRIL (MWS TX Priority Level)	MWS to Bluetooth
MWS_RX_PRIL (MWS RX Priority Level)	MWS to Bluetooth

### 2.6.9 ZigBee (MWS) Coexistence Capability

ZigBee is based on the IEEE 802.15.4 standard and it is used by a suite of communication protocols to create Personal Area Networks (PANs) supporting home automation, lighting control, etc. ZigBee radios operate in the 2.4 GHz ISM band worldwide. Unlike Bluetooth, the ZigBee specification does not use AFH. When coexisting with WLAN/Bluetooth in the 2.4 GHz band, it is important to avoid co-channel (IB) operation of these radios.

The device re-uses the MWS coexistence interface to support ZigBee coexistence. The coexistence logical signaling is used to allow a ZigBee device and a WLAN/Bluetooth combo device to exchange information and support cooperative coexistence.

### Coexistence Signals

The logical signals used for ZigBee and WLAN/Bluetooth coexistence are a subset of the LTE coexistence signaling. Considering the lower data rate of ZigBee packets, a lower baud rate may be chosen for the 2-wire UART physical interface. The BCA supports 3-way arbitration among ZigBee/WLAN/Bluetooth requests.

### 3 Detailed Description

#### 3.1 Dimensions

All dimensions are in millimeters.

Top View

No.	Item	Dimension	Tolerance	Remark
1	Width	12.00	±0.35	
2	Length	24.00	±0.35	
3	Height	2.75	±0.20	With case

### 3.2 Footprint

The outer dimensions have a tolerance of  $\pm 0.35$  mm.

## 3.3 Packaging

The module is a mass production status product and will be delivered in the package described below.

### 3.3.1 Tape Dimensions

### 3.3.2 Packing in Tape

Empty spaces in the component packed area shall be less than two per reel and those spaces shall not be consecutive.

The top cover tape shall not be found on reel holes and it shall not stick out from the reel.

### 3.3.3 Component Direction

### 3.3.4 Reel Dimension

### 3.3.5 Package Label

Example:

(1T)	Lot code
(1P)	Customer order number, if applicable
(2P)	Order number
(9D)	Date code
(Q)	Quantity
(HW/SW)	Hardware/software version

### 3.3.6 Total Package

### 3.4 Case Marking

Example:

- 1 Brand name
- 2 Hardware/software version
- 3 Engineering Sample (optional)
- 4 Order number
- 5 Lot code
- 6 Serial number
- 7 WLAN MAC address
- 8 BD address
- 9 (Reserved)
- 10 Marking for Pin 1
- 11 2D barcode, for internal usage only

## 4 Specification

All specifications are over temperature and process, unless indicated otherwise.

### 4.1 Default Test Conditions

Temperature: 25 °C ± 10 °C  
 Humidity: 40 to 85 % RH  
 Supply Voltage: +3.3 V (for module variant ENWF490xA1EF)  
 Supply Voltage: +3.3 V / +2.2 V / +1.8 V / +1.1 V (for module variant ENWF490xA2EF)

### 4.2 Absolute Maximum Ratings

The maximum ratings may not be exceeded under any circumstances, not even momentarily or individually, as permanent damage to the module may result.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units	
T <sub>STOR</sub>	Storage temperature		-40		+85	°C	
V <sub>ESD</sub>	ESD robustness	All pads, according to human body model (HBM), JEDEC STD 22, method A114			1 000	V

V <sub>PMIC_EN</sub>	PMIC Enable	High Level Input Voltage Threshold (only for module variant ENWF940[x]A1EF)	1.2	3.3	3.6	V
		Low Level Input Voltage Threshold (only for module variant ENWF940[x]A1EF)	0	0	0.4	V

<sup>8</sup> 1.8 V or 3.3 V supply voltage possible.

## Digital Pin Characteristics

### $V_{IO}$ with 1.8 V Operation<sup>9</sup>

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$V_{IH}$	High level input voltage	1.8 V operation ( $V_{IO} = 1.8$ V)	$0.7 V_{IO}$		$V_{IO} + 0.4$	V
$V_{IL}$	Low level input voltage	1.8 V operation ( $V_{IO} = 1.8$ V)	-0.4		$0.3 V_{IO}$	V
$V_{HYS}$	Input hysteresis		100			mV
$V_{OH}$	High level output voltage	1.8 V operation ( $V_{IO} = 1.8$ V)	$V_{IO} - 0.4$			V
$V_{HO}$	Low level output voltage	1.8 V operation ( $V_{IO} = 1.8$ V)			0.4	V

### $V_{IO}$ with 3.3 V Operation<sup>9</sup>

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$V_{IH}$	High level input voltage	3.3 V operation ( $V_{IO} = 3.3$ V)	$0.7 V_{IO}$		$V_{IO} + 0.4$	V
$V_{IL}$	Low level input voltage	3.3 V operation ( $V_{IO} = 3.3$ V)	-0.4		$0.3 V_{IO}$	V
$V_{HYS}$	Input hysteresis		100			mV
$V_{OH}$	High level output voltage	3.3 V operation ( $V_{IO} = 3.3$ V)	$V_{IO} - 0.4$			V
$V_{HO}$	Low level output voltage	3.3 V operation ( $V_{IO} = 3.3$ V)			0.4	V

### $V_{IOSD}$ with 1.8 V Operation for SDIO I/F<sup>9</sup>

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$V_{IH}$	High level input voltage	1.8 V operation ( $V_{IOSD} = 1.8$ V)	$0.7 V_{IO}$		$V_{IO} + 0.4$	V
$V_{IL}$	Low level input voltage	1.8 V operation ( $V_{IOSD} = 1.8$ V)	-0.4		$0.3 V_{IO}$	V
$V_{HYS}$	Input hysteresis		100			mV
$V_{OH}$	High level output voltage	1.8 V operation ( $V_{IOSD} = 1.8$ V)	$V_{IO} - 0.4$			V
$V_{HO}$	Low level output voltage	1.8 V operation ( $V_{IOSD} = 1.8$ V)			0.4	V

<sup>9</sup> The capacitive load should not be larger than 50 pF for all I/Os when using the default driver strength settings. Large capacitive loads increase the overall current consumption.

### $V_{IO\text{SD}}$ with 3.3 V Operation for SDIO I/F<sup>9</sup>

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
$V_{IH}$	High level input voltage	3.3 V operation ( $V_{IO\text{SD}} = 3.3 \text{ V}$ )	$0.7 V_{IO}$		$V_{IO} + 0.4$	V
$V_{IL}$	Low level input voltage	3.3 V operation ( $V_{IO\text{SD}} = 3.3 \text{ V}$ )	-0.4		$0.3 V_{IO}$	V
$V_{HYS}$	Input hysteresis		100			mV
$V_{OH}$	High level output voltage	3.3 V operation ( $V_{IO\text{SD}} = 3.3 \text{ V}$ )	$V_{IO} - 0.4$			V
$V_{HO}$	Low level output voltage	3.3 V operation ( $V_{IO\text{SD}} = 3.3 \text{ V}$ )			0.4	V

## 4.4 Current Consumption

### 4.4.1 For ENWF940[x]A1EF

The current consumption depends on the user scenario and on the setup and timing in the power modes. Following current consumptions are valid for module variant ENWF940[x]A1EF.

Assume  $V_{DD} = 3.3 \text{ V}$ ,  $T_{amb} = 25 \text{ }^\circ\text{C}$ , if nothing else stated.

Parameter	Condition	Min.	Typ.	Max.	Unit
$I_{VDD3V3}$ @ PMIC_EN	Power Down Grounding of PMIC_EN pin		0.25		mA
$I_{VDD3V3}$ @ DeepSleep	Deep Sleep Low-power state used in sleep state (Wifi & BT)		0.50		mA
$I_{VDD3V3}$ @ Firmware Init	Firmware Initialization Device Initialization			800	mA

### WLAN Current Consumption

## 4.6 External Sleep Clock Specifications

An external sleep clock of 32.768 kHz can be used for lowest current consumption in sleep mode. Voltage level of external sleep clock must be the same value which is used for Pin G4 (V<sub>IO</sub>).

Parameter	Min.	Typ.	Max.	Units

## 4.7 Power-up Sequence

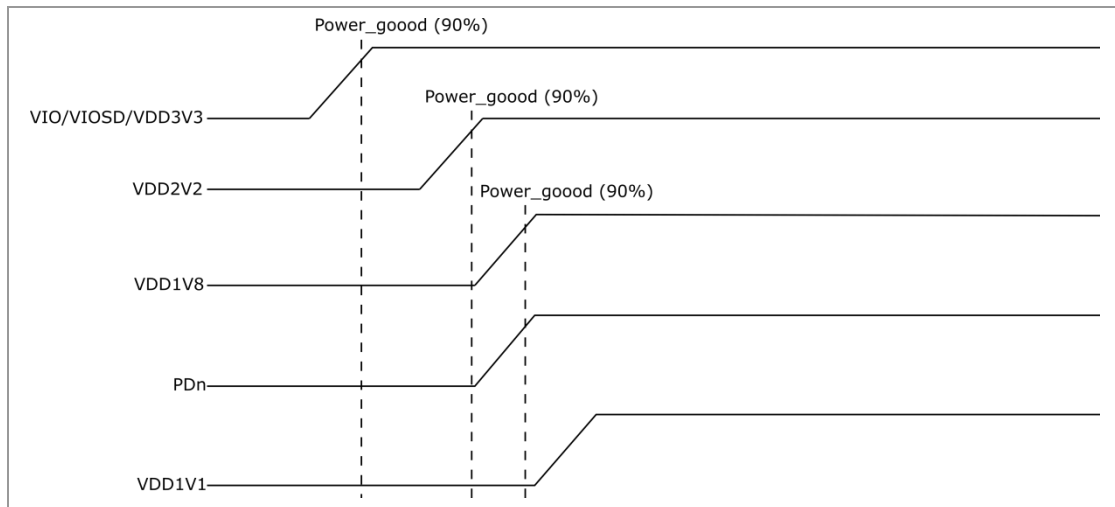

For Module Variant ENWF940[x]A1EF:

A minimum time of 100 ms is required after PMIC\_EN is de-asserted (low) and before it is asserted (high).

**For Module Variant ENWF940[x]A2EF:**

- $V_{IO}/V_{IOSD}/V_{DD3V3}$  must be good (90 %) before or at the same time all other power supplies start ramping up.
- $V_{IO}/V_{IOSD}/V_{DD3V3}$  must be good (90%) before or at the same time PDn starts ramping up.
- $V_{DD2V2}$  must be good (90 %) before or at the same time  $V_{DD1V8}$  starts ramping up.
- It is recommended to start ramping up  $V_{DD1V8} \leq 1\text{ms}$  after  $V_{DD2V2}$  ramps up.
- $V_{DD1V8}$  must be good (90 %) before or at the same time  $V_{DD1V1}$  starts ramping up.
- Ramp-up time of  $V_{IO}/V_{IOSD}/V_{DD3V3}$  must be  $< 100\text{ ms}$ .
- Ramp-up time of  $V_{DD2V2} / V_{DD1V8}$  must be  $< 100\text{ ms}$ .
- Ramp-up time of  $V_{DD1V1}$  must be  $< 5\text{ms}$ .
- All supplies must be monotonic.

## 4.8 Power-down Sequence

**For Module Variant ENWF940[x]A1EF:**

Power down sequencing is performed from internal power management IC after PMIC\_EN pin is pulled to low state.

**For Module Variant ENWF940[x]A2EF:**

- It is recommended to ramp down  $V_{DD1V8}$  after  $V_{DD2V2}$  ramps down.
- It is recommended to discharge all of the power supplies to less than 0.2V to reduce leakage
- PDn must be asserted when powering down the module

## 4.9 Power Good (only for Module Variant ENWF940[x]A1EF)

Do not connect the power good outputs (PG1, PG2, and PGLDO) if they are not used.

The PAN9028 contains power good comparators, which pull the signal to a logical low level, when the associated output voltage drops below 90 % of its regulated value. Also, when the associated rising output voltage is above 95 % of its regulated value, the power good comparators pull the signal to a logical low level.

No.	Pin Name	Pin Type	Logical Level	
			Low (typ. 0 V)	High (typ. 3.3 V)
B1	PG1	Output signal	1.1 V voltage supply not stabilized	1.1 V voltage supply stabilized
D1	PG2	Output signal	2.2 V voltage supply not stabilized	2.2 V voltage supply stabilized
C1	PGLDO	Output signal	1.8 V voltage supply not stabilized	1.8 V voltage supply stabilized

### 4.10.1.2 High-Speed UART Interface

The High-Speed UART Interface pins are powered from the V<sub>IO</sub> voltage supply with either 3.3 V or 1.8 V.

For DC specifications please refer to “Digital Pin Characteristics” ⇒ [4.3 Recommended Operating Conditions](#).

The UART interface operation includes:

- Support data input/output operations for peripheral devices connected through a standard UART interface
- 4-wire data transfer (RxD, TxD, RTS and CTS) or 6-wire data transfer (RxD, TxD, RTS, CTS, DSR, and DTR)
- Programmable baud rate (1 200 bps to 4 Mbps)
- Data format (LSB first)
- Data bit: (5 bit to 8 bit)
- Parity bit: (0 bit to 4 bit)
- Stop bit: (1 bit to 2 bit)

#### Interface Signals

Pin No.	Signal Name	Specification Name	Type	Description
B8	UART_SOUT	TxD	Host Controller Interface (HCI)	Transmit data output
A8	UART_SIN	RxD		Receive data input
A7	UART_RTS	RTS		Request to send (active low)
A6	UART_CTS	CTS		Clear to send (active low)
B6	UART_DSR	DSR	optional	Data set ready (active low)
B7	UART_DTR	DTR		Data terminal ready (active low)

### 4.10.2 Peripheral Interface

The Peripheral Interface pins are powered from the  $V_{IO}$  voltage supply with either 3.3 V or 1.8 V.

For DC specifications please refer to “Digital Pin Characteristics” ⇒ [4.3 Recommended Operating Conditions](#).

### GPIO Interface

The General-Purpose I/O (GPIO) interface is used to implement user-defined input and output signals to and from the device, such as external interrupts and other user-defined I/Os.

## 4.10.3 Audio Interface: PCM Interface

### Interface Signals

Pin No.	Signal Name	Specification Name	Type	Description
F7	PCM_DOUT	DOUT	Output	PCM data
E1	PCM_CLK	CLK	Input/Output	PCM clock signal, output if PCM master, input if PCM slave
E1	PCM_MCLK	MCLK	Output	PCM clock signal (optional), optional clock used for some codecs, derived from PCM_CLK
E11	PCM_DIN	DIN	Input	PCM data
F6	PCM_SYNC	SYNC	Input/Output	PCM Sync pulse signal, output if PCM master, input if PCM slave

### Modes of Operation

The PCM Interface supports two modes of operation:

- PCM master
- PCM slave

When in PCM master mode, the interface generates a 2 MHz or a 2.048 MHz PCM\_CLK and a 8 kHz PCM\_SYNC signal. An alternative PCM master mode is available that uses an externally generated PCM\_CLK, but still generate the 8 kHz PCM\_SYNC. The external PCM\_CLK must have a frequency that is an integer multiple of 8 kHz. Supported frequencies are in the 512 kHz to 4 MHz range.

When in PCM slave mode, the interface has both PCM\_CLK and PCM\_SYNC as inputs, thereby letting another unit on the PCM bus generate the signals.

The PCM interface consists of up to four PCM slots (time-divided) preceded by a PCM sync signal. Each PCM slot can be either 8 bits or 16 bits wide. The slots can be separated in time, but they are not required to follow immediately after another. The timing is relative to PCM\_SYNC.

## 4.12 Reliability Tests

The measurement should be done after the test device has been exposed to room temperature and humidity for one hour.

No.	Item	Limit	Condition
1	Vibration test	Electrical parameter are in specification	Freq.: 10~50 Hz; Amplitude: 1.5 mm; 20 min./cycle, 1 h each of XYZ axis
2	Shock test		Dropped 3 times onto hard wood from a height of 1 m
3	Heat cycle test		-30 °C for 30 min. and 85 °C for 30 min.; each temperature 300 cycles
4	Moisture test		60 °C, 90 % RH, 300 h
5	Low temperature test		-40 °C, 300 h
6	High temp. test		85 °C, 300 h

### 4.13 Recommended Soldering Profile

- Reflow permissible cycles: 2
- Opposite side reflow is prohibited due to module weight
- More than 75 percent of the soldering area shall be coated by solder
- The soldering profiles should be adhered to in order to prevent electrical or mechanical damage
- Soldering profile assumes lead-free soldering

## 5 Cautions

Failure to follow the guidelines set forth in this document may result in degrading of the module functions and damage to the module.

### 5.1 Design Notes

1. Follow the conditions written in this specification, especially the control signals of this module.
2. The supply voltage should abide by the maximum ratings (⇒ [4.2 Absolute Maximum Ratings](#)).
3. The supply voltage must be free of AC ripple voltage (for example from a battery or a low noise regulator output). For noisy supply voltages, provide a decoupling circuit (for example a ferrite in series connection and a bypass capacitor to ground of at least 47  $\mu$ F directly at the module).
4. This module should not be mechanically stressed when installed.
5. Keep this module away from heat. Heat is the major cause of decreasing the life time of these modules.
6. Avoid assembly and use of the target equipment in conditions where the module temperature may exceed the maximum tolerance.
7. Keep this module away from other high frequency circuits.
8. Refer to the recommended pattern when designing a board.

### 5.2 Installation Notes

1. Reflow soldering is possible twice based on the conditions set forth in ⇒ [4.13 Recommended Soldering Profile](#). Set up the temperature at the soldering portion of this module according to this reflow profile.
2. Carefully position the module so that the heat will not burn into printed circuit boards or affect other components that are susceptible to heat.
3. Carefully locate the module, to avoid an increased temperature caused by heat generated by neighboring components.
4. If a vinyl-covered wire comes into contact with the module, the wire cover will melt and generate toxic gas, damaging the insulation. Never allow contact between a vinyl cover and these modules to occur.
5. This module should not be mechanically stressed or vibrated when reflowed.
6. To repair the board by hand soldering, follow the conditions set forth in this chapter.
7. Do not wash this product.
8. Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the module.

### 5.3 Usage Condition Notes

1. Take measures to protect the module against static electricity.  
If pulses or transient loads (a large load, which is suddenly applied) are applied to the modules, check and evaluate their operation before assembly of the final products.
2. Do not use dropped modules.
3. Do not touch, damage, or soil the pins.
4. Follow the recommended condition ratings about the power supply applied to this module.
5. Electrode peeling strength: Do not apply a force of more than 4.9 N in any direction on the soldered module.
6. Pressing on parts of the metal cover or fastening objects to the metal cover will cause damage.
7. These modules are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information, and communication equipment.

### 5.4 Storage Notes

1. The module should not be stressed mechanically during storage.
2. Do not store these modules in the following conditions or the performance characteristics of the module, such as RF performance will be adversely affected:
  - Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, or NO<sub>x</sub>,
  - Storage in direct sunlight,
  - Storage in an environment where the temperature may be outside the range of 5 °C to 35 °C, or where the humidity may be outside the 45 % to 85 % range,
  - Storage of the modules for more than one year after the date of delivery storage period: Please check the adhesive strength of the embossed tape and soldering after 6 months of storage.
3. Keep this module away from water, poisonous gas, and corrosive gas.
4. This module should not be stressed or shocked when transported.
5. Follow the specification when stacking packed crates (max. 10).

### 5.5 Safety Cautions

These specifications are intended to preserve the quality assurance of products and individual components.

Before use, check and evaluate the operation when mounted on your products. Abide by these specifications without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, provide the following failsafe functions as a minimum:

1. Ensure the safety of the whole system by installing a protection circuit and a protection device.
2. Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

## 5.6 Other Cautions

1. Do not use the module for other purposes than those listed in section ⇒ [5.3 Usage Condition Notes](#).
2. Be sure to provide an appropriate fail-safe function on your product to prevent any additional damage that may be caused by the abnormal function or the failure of the module.
3. This module has been manufactured without any ozone chemical controlled under the Montreal Protocol.
4. These modules are not intended for use under the special conditions shown below. Before using these modules under such special conditions, carefully check their performance and reliability under the said special conditions to determine whether or not they can be used in such a manner:
  - In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash,
  - In direct sunlight, outdoors, or in a dusty environment,
  - In an environment where condensation occurs,
  - In an environment with a high concentration of harmful gas (e. g. salty air, HCl, Cl<sub>2</sub>, SO<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, and NO<sub>X</sub>).
5. If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these modules with new modules, because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.

For further information please refer to the Panasonic website ⇒ [7.2.2 Product Information](#).

## **5.7 Restricted Use**

### **5.7.1 Life Support Policy**

This Panasonic Industrial Devices Europe GmbH product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Panasonic customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic Industrial Devices Europe GmbH for any damages resulting.

### **5.7.2 Restricted End Use**

This Panasonic Industrial Devices Europe GmbH product is not designed for any restricted activity that supports the development, production, handling usage, maintenance, storage, inventory or proliferation of any weapons or military use.

Transfer, export, re-export, usage or reselling of this product to any destination, end user or any end use prohibited by the European Union, United States or any other applicable law is strictly prohibited.

## 6 Regulatory and Certification Information

### 6.1 Federal Communications Commission (FCC) for US

#### 6.1.1 FCC Notice

The PAN9028, including the ceramic antenna (ENWF9408A1EF and ENWF9408A2EF), and the antennas, which are listed in [⇒6.1.5 Approved Antenna List](#), complies with Part 15 of the FCC Rules.

The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407. This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

The FCC identifier for ENWF9408A1EF is **FCC ID: T7V-9028**.

The FCC identifier for ENWF9408A2EF is **FCC ID: T7V-9028**.

#### 6.1.2 Caution

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Panasonic Industrial Devices Europe GmbH may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

There is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on.

It is recommended to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### 6.1.3 Label Requirements

The OEM must ensure that FCC labelling requirements are met. This includes a clearly visible label (laser marking) on the outside of the OEM enclosure specifying the appropriate Panasonic FCC identifier for this product as well as the FCC Notice above.

The FCC identifier for model ENWF9408A1EF is **FCC ID: T7V-9028**.

The FCC identifier for model ENWF9408A2EF is **FCC ID: T7V-9028**.

This FCC identifier is valid for the PAN9028. The end product must in any case be labelled on the exterior with:

“Contains FCC ID: T7V-9028”.

Due to the PAN9028 model size, the FCC identifier is displayed in the installation instruction only and it cannot be displayed readable on the module's label due to the limited size.

### 6.1.4 Antenna Warning

This antenna warning refers to the test device with the model number ENWF9408A1EF and ENWF9408A2EF in bottom pad mode ⇒ [RF-Switch Pin Function](#).

The device is tested with a standard SMA connector and with the antenna listed below. When integrated into the OEM's product, these fixed antennas require installation preventing end users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and with Section 15.247 for emissions. The FCC identifier for the device with the antenna listed in ⇒ [6.1.5 Approved Antenna List](#) is the same (**FCC ID: T7V-9028**).

### 6.1.5 Approved Antenna List

Item	Part Number	Manufacturer	Type	Polarization	Frequency Band	Gain (dBi)
1	ANT162442DT-2001A2	TDK	Chip Antenna	Linear	2.400 - 2.484 GHz	2.1
					5.150 - 5.850 GHz	1.5

### 6.1.6 RF Exposure

To comply with FCC RF Exposure requirements, the OEM must ensure that only antennas from the Approved Antenna List are installed ⇒ [6.1.5 Approved Antenna List](#).

The preceding statement must be included as a caution statement in manuals for products operating with the approved antennas in the previous table to alert users on FCC RF Exposure compliance.

Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of the PAN9028 with a mounted ceramic chip antenna (**FCC ID: T7V-9028** for model ENWF9408A1EF and ENWF9408A2EF) are fulfilled for mobile configuration. The installation of the module is restricted to mobile host devices. The PAN9028 shall be used in such a manner that the potential for human contact during normal operation is minimized.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

### 6.1.7 Integration Instructions

License for M/N: ENWF9408A2EF: **IC: 216Q-9028**

Manufacturers of mobile, fixed, or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from [www.ic.gc.ca](http://www.ic.gc.ca).

This device has been designed to operate with the antennas listed in ⇒ [6.1.5 Approved Antenna List](#), having a maximum gain of 2.1 dBi for 2.4 GHz and 1.5 dBi for 5 GHz. Antennas not included in this list or having a gain greater than 2.1 dBi for 2.4 GHz and 1.5 dBi for 5 GHz are strictly prohibited for use with this device. The required antenna impedance is 50 Ω. The antenna used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Licence pour M/N: ENWF9408A2EF: **IC: 216Q-9028**

Il est recommandé aux fabricants d'appareils fixes, mobiles ou portables de consulter la réglementation en vigueur et de vérifier la conformité de leurs produits relativement aux limites d'exposition aux rayonnements radiofréquence ainsi qu'au débit d'absorption spécifique maximum autorisé.

Des informations pour les utilisateurs sur la réglementation Canadienne concernant l'exposition aux rayonnements RF sont disponibles sur le site [www.ic.gc.ca](http://www.ic.gc.ca).

Ce produit a été développé pour fonctionner spécifiquement avec les antennes listées dans le tableau ⇒ [6.1.5 Approved Antenna List](#), présentant un gain maximum de 2.1 dBi pour 2.4 GHz et 1.5 dBi pour 5 GHz. Des antennes autres que celles listées ici, ou présentant un gain supérieur à 2.1 dBi pour 2.4 GHz et 1.5 dBi pour 5 GHz ne doivent en aucune circonstance être utilisées en combinaison avec ce produit. L'impédance des antennes compatibles est 50 Ω.

L'antenne utilisée avec ce produit ne doit ni être située à proximité d'une autre antenne ou d'un autre émetteur, ni être utilisée conjointement avec une autre antenne ou un autre émetteur.

### 6.2.1 Radio Standards Specification RSS-247 Issue 2

The Radio Standards Specification RSS-247, Issue 2, Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and License-Exempt Local Area Network (LE-LAN) Devices, replaces RSS-247, Issue 1, dated May 2015. It sets out certification requirements for radio apparatus operating in the bands 2 400 MHz to 2 483.5 MHz and 5 725 MHz to 5 850 MHz employing frequency hopping, digital modulation and/or a combination (hybrid) of both

techniques. It also includes license exempt local area network (LE-LAN) devices operating in the bands 5 150 MHz to 5 250 MHz, 5 250 MHz to 5 350 MHz, 5 470 MHz to 5 725 MHz and 5 725 MHz to 5 850 MHz as specified in SP-5 150 MHz.

### **6.2.1.1 General**

Equipment covered by the standard RSS-247 is classified as Category I equipment. Either a technical acceptance certificate (TAC) issued by the Certification and Engineering Bureau of Innovation, Science and Economic Development Canada (ISED) or a certificate issued by a certification body (CB) is required.

### **6.2.1.2 Certification Requirements**

RSS-247 shall be used in conjunction with RSS-Gen, General Requirements for Compliance of Radio Apparatus, for general specifications and information relevant to the equipment for which this standard applies. Equipment certified under the standard is required to comply with the provisions in RSS-Gen with respect to emissions falling within restricted frequency bands. These restricted frequency bands are listed in RSS-Gen.

### **6.2.1.3 Measurement Method**

In addition to the requirements in RSS-Gen and the requirements of the standard RSS-247, the method for measuring DTS devices is provided in ANSI C63.10.

### **6.2.1.4 FHS and DTS operating in the bands 2 400 MHz to 2 483.5 MHz**

This section applies to frequency hopping systems (FHSs) in the bands 2 400 MHz to 2 483.5 MHz and 5 725 MHz to 5 850 MHz and digital transmission systems (DTSs) in the band 2 400 MHz to 2 483.5 MHz. Systems in these bands can be frequency hopping, digital transmission and/or a combination (hybrid) of both types. The digital transmission technology of DTSs or hybrid systems operating in the band 5 725 MHz to 5 850 MHz shall comply with the requirement in section Technical requirements for license-exempt local area network devices and digital transmission systems operating in the 5 GHz band.

### 6.2.1.5 Requirements for LE-LAN and DTS operating in the 5 GHz Band

The section provides standards for Licence-Exempt Local Area Network (LE-LAN) devices operating in the bands:

- 5 150 to 5 250 MHz,
- 5 725 to 5 850 MHz
- For DTSs operating in the band 5 725 MHz to 5 850 MHz that employ digital modulation technology, but are not designed for LE-LAN operation.

Devices with occupied bandwidths which overlap different bands shall comply with all operational requirements for each band.

<b>RSS-247 Section</b>	6.2.1
<b>Frequency Band (MHz)</b>	5 150 to 5 250
<b>Device Type</b>	LE-LAN devices are restricted to <b>indoor operation</b> only.
<b>Devices out of Scope</b>	OEM devices installed in vehicles.
<b>Power Limits</b>	Maximum e.i.r.p. shall not exceed 200 mW or $10+10 \log_{10}B$ , dBm, whichever power is less. B is the 99 % emission bandwidth in megahertz. The e.i.r.p. spectral density shall not exceed 10 dBm in any 1 MHz band.
<b>Unwanted Emission Limits</b>	For transmitters with operating frequencies in the band 5 150 MHz to 5 250 MHz, all emissions outside the band 5 150 MHz to 5 350 MHz shall not exceed -27 dBm/MHz e.i.r.p. Any unwanted emissions that fall into the band 5 250 MHz to 5 350 MHz shall be attenuated below the channel power by at least 26 dB, when measured using a resolution bandwidth between 1 % and 5 % of the occupied bandwidth (i.e. 99% bandwidth), above 5 250 MHz. The 26 dB bandwidth may fall into the 5 250 MHz to 5 350 MHz band; if the occupied bandwidth also falls within the 5 250 MHz to 5 350 MHz band, the transmission is considered as intentional and the devices shall comply with all requirements in the band 5 250 MHz to 5 350 MHz including implementing dynamic frequency selection (DFS) and TPC, on the portion of the emission that resides in the 5 250 MHz to 5 350 MHz band.
<b>Complied Module M/N</b>	ENWF9408A1EF, ENWF9408A2EF

<b>RSS-247 Section</b>	6.2.4
<b>Frequency Band (MHz)</b>	5 725 to 5 850
<b>Device Type</b>	For equipment operating in the band 5 725 MHz to 5 850 MHz
<b>Devices out of Scope</b>	Fixed point-to-point devices and devices with antenna gain greater than 6 dBi.
<b>Power Limits</b>	The minimum 6 dB bandwidth shall be at least 500 kHz. The maximum conducted output power shall not exceed 1 W. The output power spectral density shall not exceed 30 dBm in any 500 kHz band.
<b>Unwanted Emission Limits</b>	Devices shall have e.i.r.p. of unwanted emissions comply with the following: 27 dBm/MHz at frequencies from the band edges decreasing linearly to 15.6 dBm/MHz at 5 MHz above or below the band edges 15.6 dBm/MHz at 5 MHz above or below the band edges decreasing linearly to 10 dBm/MHz at 25 MHz above or below the band edges 10 dBm/MHz at 25 MHz above or below the band edges decreasing linearly to -27 dBm/MHz at 75 MHz above or below the band edges -27 dBm/MHz at frequencies more than 75 MHz above or below the band edges

## 6.2.2 IC Notice

### English

The device PAN9028 and versions (⇒ [7.1 Ordering Information](#)), including the antennas (⇒ [6.1.5 Approved Antenna List](#)), comply with Canada RSS-Gen Rules. The device meets the requirements for modular transmitter approval as detailed in RSS-Gen.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any inference received, including interference that may cause undesired operation.

### French

Le présent appareil PAN9028 (⇒ [7.1 Ordering Information](#)), les antennes y compris (⇒ [6.1.5 Approved Antenna List](#)), est conforme aux CNR-Gen d'ISDE applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

1. L'appareil ne doit pas produire de brouillage, et
2. L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

### 6.2.3 Labeling Requirements

#### English

#### Labeling Requirements

The OEM must ensure that IC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic IC identifier for this product as well as the IC Notice above.

The IC identifiers are:

**IC: 216Q-9028** (for M/N: ENWF9408A1EF)

**IC: 216Q-9028** (for M/N: ENWF9408A2EF)

These IC identifiers are valid for all PAN9028 modules ⇒ [7.1 Ordering Information](#). In any case, the end product must be labelled on the exterior with:

“Contains IC: 216Q-9028”.

#### French

#### Obligations d'étiquetage

Les fabricants d'équipements d'origine (FEO) – en anglais Original Equipment Manufacturer (OEM) – doivent s'assurer que les obligations d'étiquetage IC du produit final sont remplies. Ces obligations incluent une étiquette clairement visible à l'extérieur de l'emballage externe, comportant l'identifiant IC du module Panasonic inclus, ainsi que la notification ci-dessus.

L'identifiant IC est:

**IC: 216Q-9028** (pour M/N: ENWF9408A1EF)

**IC: 216Q-9028** (pour M/N: ENWF9408A2EF)

Cet identifiant est valide pour tous les modules PAN9028 ⇒ [7.1 Ordering Information](#). Dans tous les cas les produits finaux doivent indiquer sur leur emballage externe la mention suivante:

“Contient IC: 216Q-9028”.

### 6.3 European Conformity According to RED (2014/53/EU)

The PAN9028 modules with model number ENWF9408A1EF and ENWF9408A2EF comply with the standards according to the following LVD (2014/35/EU), EMC-D (2014/30/EU) together with RED (2014/53/EU) articles:

3.1a Safety/Health:	EN 62368-1:2014 EN 62311:2008
3.1b EMC:	EN 301 489-1 V2.2.3 EN 301 489-3 V2.1.2 (Draft) EN 301 489-17 V3.2.4
3.2 Radio:	EN 300 328 V2.2.2 EN 301 893 V2.1.1 EN 300 440 V2.1.1

- Due to the model size, the CE marking is displayed in the installation instruction only and it cannot be displayed conform to regulation (EU) No 765/2008 in 5mm height on the module's label due to the limited space.
- The RED EU Type Examination Certificate No. G0M-2010-9377-V01 issued by the Notified Body 0608 can be used for the OEM end product conformity assessment. If a Notified Body has been contracted for the end product conformity assessment, it should be noted that this EU Type Examination Certificate should be used for conformance assessment.

As a result of the conformity assessment procedure described in 2014/53/EU Directive, the end customer equipment should be labelled as follows:

The end customer has to assure that the device has a distance of more than 20 cm from the human body under all circumstances.

The end customer equipment must meet the actual Safety/Health requirements according to RED.

PAN9028 and its model versions in the specified reference design can be used in all countries of the European Economic Area (Member States of the EU, European Free Trade Association States [Iceland, Liechtenstein, and Norway]), Monaco, San Marino, Andorra, and Turkey.

### 6.3.1 Radio Equipment Directive

The Radio Equipment Directive 2014/53/EU (RED) establishes a regulatory framework for placing radio equipment on the market. It ensures a Single Market for radio equipment by setting essential requirements for safety and health, electromagnetic compatibility, and the efficient use of the radio spectrum.

The RED aligned the previous Directive, the Radio and Telecommunication Terminal Equipment Directive 1999/5/EC (R&TTED), with the new legislative framework for the marketing of products. The RED is applicable as of 2016-06-13. It included a one-year transitional period, which ended on 2017-06-12 (Article 48). On 2017-06-20, the Commission Implementing Regulation (EU) 2017/1354 was adopted. This specifies how to present the information provided for in Article 10(10) of Directive 2014/53/EU.

#### Article 10(10) RED

In cases of restrictions on putting into service or of requirements for authorisation of use, information available on the packaging shall allow the identification of the Member States or the geographical area within a Member State where restrictions on putting into service or requirements for authorisation of use exist. Such information shall be completed in the instructions accompanying the radio equipment. The Commission may adopt implementing acts specifying how to present that information. Those implementing acts shall be adopted in accordance with the advisory procedure referred to in Article 45(2).

- **Class 1:**  
Radio equipment that can be operated without any restriction in EU, EEA, and EFTA. According to Article 8(1)b of the RED, it is clarified that no national radio interfaces specifications are required to be notified under RED;
- **Class 2:**  
Radio equipment subject to restrictions in one or more EU, EEA and EFTA countries where:
  - The technical parameters are not harmonised through EU, EEA, and EFTA;
  - The technical parameters are harmonised through EU, EEA and EFTA, and do not fall in above class 1 definition.

Radio equipment class means a class identifying particular categories of radio equipment which, under this Directive, are considered similar and those radio interfaces for which the radio equipment is designed.

#### Article 8 RED

Notification of radio interface specifications and assignment of radio equipment classes 1:

- 1) Member States shall notify, in accordance with the procedure set out in Directive 98/34/EC, the radio interfaces which they intend to regulate except:
  - a) The radio interfaces which fully and without any deviation comply with the Commission decisions on the harmonised use of radio spectrum adopted pursuant to Decision No. 676/2002/EC; and

- b) The radio interfaces which, in accordance with implementing acts adopted pursuant to paragraph 2 of this Article, correspond to radio equipment which can be put into service and used without restrictions within the Union.
- 2) The Commission shall adopt implementing acts establishing the equivalence between notified radio interfaces and assigning a radio equipment class, details of which shall be published in the Official Journal of the European Union. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 45(3).

The Radio Interface Specifications Templates are provided for information in the EFIS database for applications which use is in harmonised radio spectrum, however with restrictions.

### 6.3.2 Equipment Classes

The PAN9028 is a radio module classified as class-1 or class-2 radio equipment depending on the frequency band in which it can operate. This equipment class is passed on the end-product which integrates the module.

#### Class 1

Class 1 radio equipment can be placed on the market and put into service without restrictions according to Article 1(3) of Commission Decision 2000/299/EC (Version 2018-01).

This radio module is defined as Class 1 radio equipment when it is restricted to operate in the following frequency bands:

Sub-class of Class 1	Application/Reference	Frequency Band (MHz)	Transmit Power/Power Density
22	Wideband Data Transmission Systems EN 300 328	2 400 to 2 483.5	100 mW e.i.r.p and 100 mW/100 kHz e.i.r.p. density applies when frequency hopping modulation is used, 10 mW/MHz e.i.r.p. density applies when other types of modulation are used.
43	Non-Specific Short Range Devices EN 300 440	5 725 to 5 875	25 mW e.i.r.p.

#### Class 2

Class 2 radio equipment are restricted in accordance with Article 1(3) of Commission Decision 2000/299/EC1 if the equipment falls within the scope of Class 2.

This radio module is also defined as Class 2 radio equipment when it is restricted to operate in the following frequency bands:

Sub-class of Class 2	Application/Reference	Frequency Band (MHz)	Transmit Power/Power Density
H01	Wireless Access Systems including Radio Local Area Networks (WAS/RLANs) <b>Restricted to indoor use</b> EN 301 893	5 150 to 5 350	Max. 200 mW mean e.i.r.p. and max. 10 mW/MHz mean e.i.r.p. density in any 1 MHz band.

The usage of PAN9028 module in a vehicular environment cannot be considered as **indoor use**.

## 6.4 Bluetooth Qualification

The PAN9028 series modules are Bluetooth qualified as "Controller Subsystem". Following the qualified design ID's listed for the module:

Bluetooth Product	Project Name	Power Class	Model	Declaration ID	QDID
Controller Subsystem	PAN9028	1	ENWF940xAxEF	D052581	172842

If the module is combined with a host stack that is Bluetooth qualified as "Host Subsystem" it is possible to list an "End Product" without any further qualification tests.

The OpenSynergy Bluetooth software is commercially available and is delivered in source code format. Applications that are built using the Blue SDK are executed in Linux user space making development easy. The stack software and profiles are qualified components and are listed on the Bluetooth SIG website.

- Blue SDK v6.x and Low Energy SDK v3.x: QDID 120439
- Bluetooth traditional profiles: QDID 117748

### Bluetooth Marks

According to the Bluetooth SIG, the PAN9028 fulfills the criteria to label your product as a Bluetooth device:

For further information please refer to the Bluetooth website [www.bluetooth.com](http://www.bluetooth.com).

## 6.5 RoHS And REACH Declaration

The latest declaration of environmental compatibility (RoHS and REACH) for supplied products can be found on the Panasonic website in the "Downloads" section of the respective product ⇒ [7.2.2 Product Information](#).
