7. Soldering conditions :

Perform the soldering under the conditions shown below.

7.1 Soldering conditions (1)

<Reflow soldering>

(Fig-7) 2 time max.

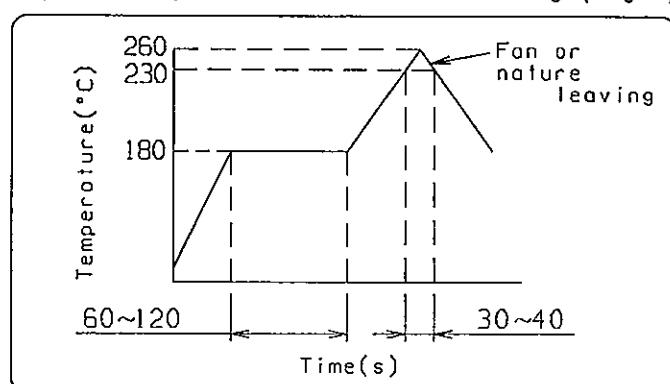

-Solder cleam thickness :

$t=0.15 \text{ mm} - 0.2 \text{ mm}$

-Prohibitive items :

You sould not use preflux.

Temperature profile of reflow soldering.(Fig-7)

7.2 Soldering conditions (2)

<Soldering iron>

Soldering iron : 20W or lower.

Temperature of the iron tip : 350°C or lower.

The duration to apply the soldering iron : 3 seconds or lower. (1 time)

PWB design - When you design mounting hole of PWB, please refer to its dimension defined in this specification.

Particularly, care should be taken in the case of wiring such as jumper wire near the product body where flux is deluting.

If flux is spattered to the product body, it may cause electrical contact or sliding trouble.

8. Application Notes

8.1 Prohibited items on fire and smoking

Absolutely avoid use of a product beyond its rated range because doing so may cause a fire. If misuse or abnormal use may result under conditions in which the product is used out of its rated range, take proper measures such as current interruption using a protective circuit.

The grade of nonflammability for resin used in product is "94HB," which is based on UL94 Standards (flammability test for plastic materials).

Prohibit use in a location where a spreading fire may be generated or prepare against a spreading fire.

8.2 For use in equipment for which safety is requested

Although care is taken to ensure product quality, inferior characteristics, short circuits, and open circuits are some problems that might be generated. To design a equipment which places maximum emphasis on safety, review the effect of any single fault of a product in advance and perform virtually fail-safe design to ensure maximum safety by:

- Preparing a protective circuit or a protective device to improve system safety, and set
- Preparing a redundant circuit to improve system safety so that the single fault of a product does not cause a dangerous situation.

8.3 Reliability

- Storage condition

Do not store the product under high temperatures and/or high humidity, or in a location where corrosive gas may be generated.

Store the product at room temperature and room humidity in a packed condition.

Use them within a maximum of 6 months.

Check the date of manufacture on the package box and apply the "first-in-first-out" rule.

If unpacked product must be stored as inventory, Store them in polyethylene bag to keep out air.

- The encoder's pulse count method should be designed with taking operating speed, sampling time, and the design of the microcomputer software, etc. into consideration.
