FX-551 SERIES

CE Conforming to EMC Directive

Significantly improved stability and operation ease thanks to the industry's top* emission power and enhanced versatility!

* As of January 2016, survey by our company

Emission power **3 times** higher than conventional models

Sensing range **1.6 times** longer than conventional models

Entry model

Industry's No. 1!*

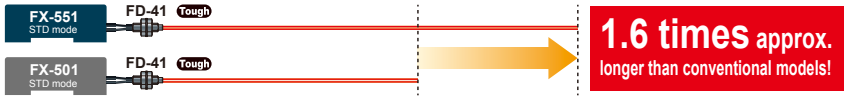
Three times higher emission power and 1.6 times longer sensing range than conventional models!

* As of January 2016, survey by our company

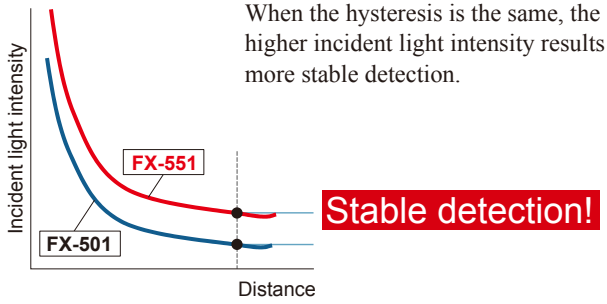
Ample sensing distance even with thin fiber

The sensing range of the thin reflective type fiber is about 1.6 times longer than that of a conventional product (the sensing range of the standard reflective type fiber is about 1.4 times longer). This adds extra flexibility to the sensor layout.

Fiber	Sensing range (STD mode)		Rate of increase in sensing range
	FX-551	FX-501	
FT-31	480 mm 18.898 in	315 mm 12.402 in	152 %
FT-42	1,470 mm 57.874 in	1,130 mm 44.488 in	130 %
FD-41	200 mm 7.874 in	125 mm 4.921 in	160 %
FD-61	620 mm 24.409 in	450 mm 17.717 in	138 %



When the hysteresis is the same, the higher incident light intensity results in more stable detection.

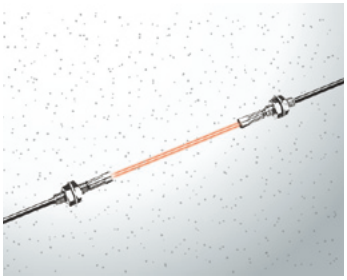


When the hysteresis is the same, the higher incident light intensity results in more stable detection.

Easy adjustment of beam axis

Thanks to the high emission power, a slight deviation of beam axis causes no problem. It is ideal for use in dusty areas* or for detection through an extremely small slit.

* Need to confirm proper operation in installed condition.



Equipped with a mode to minimize the effect of ambient light

When setting to activate the environment resistance mode in the emission frequency setting, the ambient illuminance for LED lights becomes about 2.5 times higher than that in the normal mode. This reduces erroneous detections caused by LED lights.

Simplified functions for improved operation ease

The **FX-500** series and newer models are equipped with only basic functions for improved ease of use. No matter which model you select, they are all easy to use.

MODE NAVI + Direct setting

MODE NAVI uses three indicators and a dual display to show the amplifier's basic operations. The current operation mode can be confirmed at a glance, so even a first-time user can easily operate the amplifier.

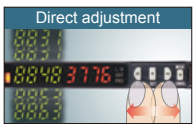
■NAVI display (lights off during RUN mode)

L/D
Switches output operation.
L: Light-ON D: Dark-ON

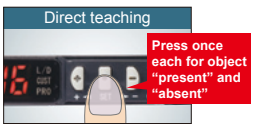
CUST
The sensitivity to received light can be changed directly.

PRO
Allows the selection of advanced functions such as timer, shift amount setting and threshold value tracking setting.

■Direct setting



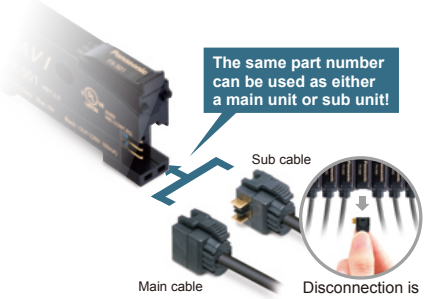
Threshold value can be changed during RUN mode.



Teaching can be done during RUN mode.

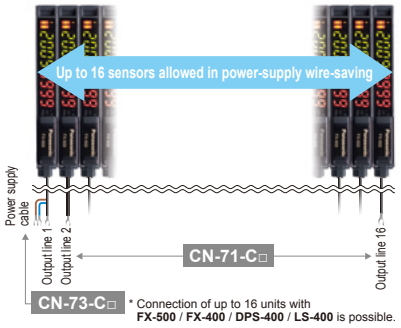
No need to specify a main unit or sub unit

All **FX-500** amplifiers can be used as either a main unit or a sub unit. Just use a main cable or a sub cable to distinguish the two. This reduces the costs of inventory management.



Wire-saving, space-saving

The quick-connection cables enable reduction in wiring. The connections and man-hours required for the relay terminal block setup can be reduced and valuable space is saved.



* Connection of up to 16 units with **FX-500** / **FX-400** / **DPS-400** / **LS-400** is possible.
* The optical communication function can not be used.

▶ List of functions in PRO mode

PRO 1	Response time setting, timer setting, shift amount setting
PRO 2	Teaching lock setting, digital display item setting, digital display turning setting, Eco setting
PRO 3	Display adjustment setting, reset setting, emission frequency setting, threshold value tracking setting
