GX-N SERIES

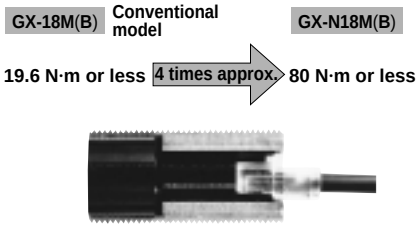
DC 3-wire Cylindrical Inductive Proximity Sensor Amplifier Built-in

IP67g Oil resistant Metal embedding possible

High performance and environmental resistance at low price

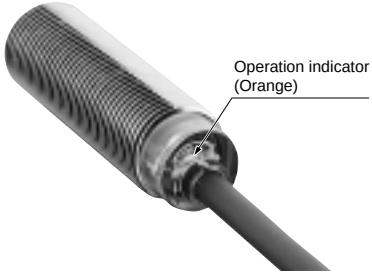
Robust in tightening

The tightening torque has been improved to approx. four times greater than that of conventional models because of its thick case. As the sensor can be securely tightened, it does not get loose due to vibration or shock.



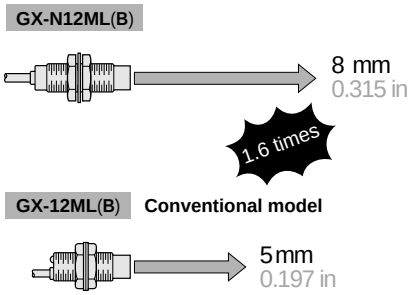
Visible operation indicator

The operation indicator (orange) is easily observable from any direction since it is housed in the transparent tail section, which lights up brightly.



Long sensing range

The **GX-N** series features 1.6 times longer sensing range than conventional models. Setting with enough margin is possible.

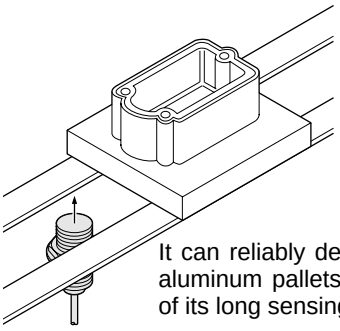


Cost effective

It combines high reliability with cost effectiveness.

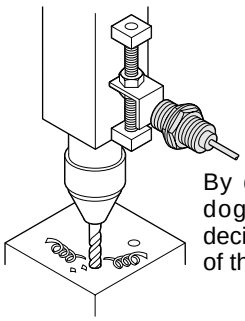
APPLICATIONS

Detecting traveling aluminum pallets



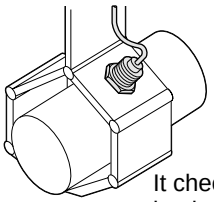
It can reliably detect even aluminum pallets because of its long sensing range.

Controlling depth of drilling



By detecting the dog, the sensor decides the depth of the drilled hole.

Detecting workpiece in robot hand



It checks handling by the robot.

Distance from surrounding metal

• As metal around the sensor may affect the sensing performance, pay attention to the following points.

Influence of surrounding metal

• The surrounding metal will affect the sensing performance. Keep the minimum distance specified in the table below.
