# Panasonic

Thru-beam Type CMOS Type Digital Displacement Sensor

(Excluding SC-HG1-USB)

# The Industry's Highest-Class<sup>\*</sup> Measurement Accuracy Is Now Yours.

\* Among thru-beam type digital sensors, as of January 2019 in-company survey

# **Ultra-slim**

# **HG-T** series

8 mm 0.315 in

The ultra-slim unit with a thickness of 8 mm 0.315 in allows easy installation in a limited space such as the inside of equipment.

## Wide-angle measurement

The belt-shaped laser beam with a measurement width of 10 mm 0.394 in is used for measurement of dimensions and positions.

# **Two types of sensor heads are available.**

Two types of sensor heads, one with a standard type receiver and the other with a slim type receiver, are available.

# **Industry's highest**<sup>\*1</sup> measurement accuracy

The HG-T series boasts repeatability<sup>\*2</sup> of 1  $\mu$ m 0.039 mil and offers the highest\*1 measurement accuracy in the industry.

·Sampling cycle setting can be selected from two options

- Standard: 1 ms, High speed: 0.5 ms.
- •Average count setting can be selected from 11 options.
- 1 time, 2 times, 4 times, 8 times, 16 times, 32 times, 64 times, 128 times, 256 times, 512 times, 1,024 times \*1 As of January 2019, in-company survey
- \*2 This is the P-P value of digital measurement value with half shading at the middle position of the installation distance

# Side view attachment is available (optional). HG-T1010

Side view attachment (optional) is available for the standard type sensor head HG-T1010. This attachment can bend the laser beam at a right angle to allow flexible installation of the sensor head.

\* Two side view attachment units are required when using the attachment on both emitter and receiver \* The slim type sensor head HG-T1110 cannot be mounted with the side view attachment. \* Be sure to confirm proper detection using actual equipment in advance when using the side

view attachment.

# **Ease of Installation**

# Beam axis adjustment assist function

The standard type sensor head **HG-T1010** indicates the direction of receiver displacement relative to the emitter on the controller's display screen and with the beam axis adjustment indicators on the receiver in an easy-to-understand fashion.

 $^{\ast}$  The slim type sensor head  $\rm HG-T1110$  displays the displacement information only on the controller's display section.

When beam axis is displaced slightly toward the BOTTOM side

# Automatic emitter / receiver cable recognition

The HG-T series automatically recognizes the positional relationship of the emitter and receiver connected to the sensor head connection cable at the time the controller is turned ON. This function eliminates the need for identifying the correct cables to connect to the emitter and receiver. Wiring can be completed by simply attaching Controller the connectors to the emitter and receiver Sensor head connection cable Sensor head (1) Emitter and (2) Receiver OR (1) Receiver and (2) Emitter Emitter and receiver can be connected to either connectors!

\* The sensor head connection cable is branched into two cables on the sensor head connecting side, but the two cables can be connected interchangeably to the emitter and receiver.

# Die-cast aluminum case

The sensor head case is made of light and strong die-cast aluminum. It minimizes measurement fluctuations due to temperature effects. The die-cast aluminum case does not easily become distorted in shape by tightening of mounting screws as compared to a resin case. It is highly resistant to deterioration

due to ageing. This robust case helps prevent deviations of beam axis alignment.

Die-cast aluminum case

# **IP67** protection

The **HG-T** series features a protection structure of IP67 (IEC) so it can be used in a place where the product may be exposed to water or large amounts of dust.

\* Note that if the beam emitting / receiving surfaces of the sensor head are adhered with water or dust, correct measurements become inaccurate.
\* The sensor head is watertight, but the connectors are not structurally resistant to dust, water or corrosion. Therefore, the HG-T series cannot be submerged in water or placed under falling water for measurement operation. Be sure to use the product in an appropriate environment.

# **High-performance Controller**

**Dual display for added indication flexibility** (equipped with NAVI function)

The 2-line digital display simultaneously shows head measurement (measured value) and judgment value (calculated value).

# All-direction LCD

The high-contrast LCD provides sharp and clear indications and wide viewing angle.

# Equipped with intuitive circle meter

Values between allowable maximum and minimum values are indicated in green. Values outside of the allowable range are indicated in orange. This provides at-a-glance understanding of the margin to the tolerance limits.

Higher than maximum value

Lower than minimum value

# **Five types of detection modes**

#### Industry's First!\* Auto edge detection mode

Edge detection can be started from either the TOP or BOTTOM without registering the detection direction. This eliminates the need for checking the detection direction.

\* As of January 2019, according to in-company survey

#### Edge detection mode

BOTTOM

Inside diameter / gap detection mode

External form / width detection mode

#### **Central position detection mode**

воттом

# Monitoring of effects caused by stains

\* The reference waveform can be confirmed by using the "**HG-T Configuration Tool**" USB-based PC setting software and **SC-HG1-USB** USB communication unit. For details, refer to page 6.

### **Stable measurement of even transparent workpieces**

The judgment level can be adjusted according to the degree of transparency.

# Elimination of effects caused by fine foreign matters

The judgment filter value can be adjusted for the prevention of erroneous detections due to fine foreign matters. The judgment filter value can be set to a desired value between 3 and 50.

# **Convenient Tool Software**

Combined use of the USB-based PC setting software, "HG-T Configuration Tool," and the USB communication unit, "SC-HG1-USB," enables confirmation and change of current values and settings in the HG-T series using a PC.

# USB-based PC setting software

#### **HG-T Configuration Tool**

The USB-based PC setting software, "HG-T Configuration Tool," can be downloaded free from our website.

Communication units for field networks such as CC-Link as CC-Link IE Field are available so the HG-T series can be linked with a production system for IoT application.

# **Applications**

Measurement of meandering on lithium-ion battery winding machine

Thanks to the compact design, the sensor head can be installed at a location close to the winding core. This improves the meander measurement accuracy.

#### **Detection of clearance between rollers**

The clearance between rollers can be measured for stabilizing the workpiece quality. The compact head is easy to install.

#### Measurement of motor shaft eccentricity

SC-HG1-USE

# Communication unit for digital displacement sensor

# Directly send the measurement values of multiple sensors to a host!

#### CC-Link IE Field / CC-Link communication unit

The communication unit for digital displacement sensor can be used to connect directly to a CC-Link / CC-Link IE Field network. This lets you acquire digital data and ON / OFF information in real-time without a program. In addition, you can change controller settings and log measurement data via the CC-Link / CC-Link IE Field network, so you can also use the system for preventative maintenance of digital displacement sensors.

Note: When connected to a communication unit for digital displacement sensor, up to 14 slave units can be connected per master unit

#### **USB** communication unit

The USB communication unit provides convenient functions that facilitate the setting of the HG-T series while observing the waveform of received light by operating the dedicated USBbased PC setting software. The USB-based PC setting software can be downloaded free from our website.

up to 14 slave units\*1

6) Average count (response time) is for when the sampling cycle is set to 1 ms (standard sampling). Response times differ when the sampling cycle is set to 0.5 ms (high-speed sampling).

7) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.

## **SPECIFICATIONS**

#### Communication units for digital displacement sensors

~		
	Designation	USB communication unit
Iten	n Model No.	SC-HG1-USB
Con	patible controllers	HG-TC
	imum number of nectable controllers	Maximum of 15 controllers (one master, 14 slaves) per SC-HG1-USB unit
Sup	ply voltage (Note 3)	24 V DC ±10 %, including ripple 0.5 V (P-P) (Within specified power supply voltage range)
Curr	ent consumption	50 mA or less
Con	nmunication method	USB 2.0 Full Speed (Note 4)
Con	munication protocol	Our dedicated protocol
USE	3 port	USB Mini-B (1 port)
	ution degree / rating altitude	2 / 2,000 m 6561.680 ft or less (Note 5)
	Protection	IP40 (IEC)
e	Ambient temperature	-10 to +45 °C +14 to +113 °F (No dew condensation or icing allowed), Storage: -20 to +60 °C -4 to +140 °F
tan	Ambient humidity	35 to 85 % RH, Storage: 35 to 85 % RH
l resist	Voltage withstandability	1,000 V AC for one min. between all supply terminals connected together and enclosure
menta	Insulation resistance	20 M $\Omega$ or more, with 250 V DC megger
Environmental resistance	Vibration resistance	10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude (10 to 58 Hz), Maximum acceleration 49 m/s <sup>2</sup> (58 to 150 Hz) in X, Y and Z directions for two hours each
	Shock resistance	98 m/s <sup>2</sup> acceleration (10 G approx.) in X, Y and Z directions five times each
Mate	erial	Enclosure: Polycarbonate
Wei	ght	Net weight: 35 g approx., Gross weight: 95 g approx

 Weter weight. 35 g approx., Gross weight. 35 g approx

 Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.

 2) USB 2.0 (Mini-B) cable for the connection of a PC is not provided with the product. Please purchase a USB 2.0 (Mini-B) cable.

 3) Power is supplied from a connected controller / master unit.

 4) Dependent on PC environment.

 5) Do not use or store in an environment that has been pressurized to an air pressure bioter than the other pressure at 0 m.

pressure higher than the atmospheric pressure at 0 m.

Rem	note station type	Remote device station		
Netv	vork No. setting	1 to 239 (decimal) [1 to EF (hex)] (0 and 240 or more: Error) (Note 3)		
Cyclic transmission (Maximum number of links per station)		RX / RY: 128 points each (128 bits), 16 bytes RWr / RWw: 64 points each (64 words), 128 bytes		
Tran	sient transmission	Server function only, data size 1,024 bytes		
Stat	ion No.setting	1 to 120 (decimal) (0 and 121 or more: Error)		
Bau	d rate	1 Gbps		
Tran	smission line types	Line, star (mixing of line and star types is possible), ring		
Max dista	imum transmission	100 m 328.084 ft		
	imum number of nectable units	121 units (1 master station, 120 slave stations)		
Case	cade connection levels	Maximum 20		
	ution degree / rating altitude	2 / 2,000 m 6561.680 ft or less (Note 4)		
	Protection	IP40 (IEC)		
е	Ambient temperature	-10 to +45 °C +14 to +113 °F (No dew condensation or icing allowed), Storage: -20 to +60 °C -4 to +140 °F		
tan	Ambient humidity	35 to 85 % RH, Storage: 35 to 85 % RH		
I resis	Voltage withstandability	1,000 V AC for one min. between all supply terminals connected together and enclosure		
menta	Insulation resistance	$20 \ M\Omega$ or more, with 250 V DC megger between all supply terminals connected together and enclosure		
Environmental resistance	Vibration resistance	10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude (10 to 58 Hz), Maximum acceleration 49 m/s <sup>2</sup> (58 to 150 Hz) in X, Y and Z directions for two hours each		
	Shock resistance	98 m/s² acceleration (10 G approx.) in X, Y and Z directions five times each		
Mate	erial	Enclosure: Polycarbonate		
Corr	munication cable	Ethernet cable that satisfies 1000BASE-T standard Category 5e or higher (Double-shielded / STP, straight cable) (Note 5)		
Wei	ght	Net weight: 100 g approx.,Gross weight: 150 g approx.		
Notor	1) Whore measurer	nont conditions have not been encoified presidely the conditions		

Notes: 1) Where measurement conditions have not been specified precisely, the conditions a) Whete the average of the operation of the end operation of the precisely, the condition used were an ambient temperature of +20 °C +68 °F.
 b) Power is supplied from a connected controller / master controller.
 c) For the network No. setting on this product, convert the network number to hex and set the hex value.

a) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.
5) Use CC-Link Partner Association recommended cable.

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.
2) Power is supplied from a connected controller / master controller.
3) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.

# I/O CIRCUIT DIAGRAMS

For communication unit for digital displacement sensors, refer to the instruction manual. The instruction manual can be downloaded from our website.

#### NPN output type

#### HG-TC101 / Master unit

Non-voltage contact or NPN open collector transistor or 0 to +1.2 V DC: Effective +8 V to +V DC or open: Ineffective

Note: Use shielded wire for the analog output.

### PRECAUTIONS FOR PROPER USE

 This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.

- Never use this product as a sensing device for personnel protection.
- When using sensing devices for personnel protection, use products that meet the laws and standards for personnel protection that apply in each region or country, such as OSHA, ANSI and IEC.

#### User's Manual available for download

The  $\ensuremath{\text{HG-T}}$  series User's Manual is available for download from our website.

#### PNP output type

#### HG-TC101-P / Master unit

Note: Use shielded wire for the analog output.

Refer to the instruction manual for details. The instruction manual can be downloaded from our website.

#### **Cautions for laser beams**

 This product is classified as a Class 1 Laser Product in IEC / JIS / GB standards and in FDA\* regulations. Do not look at the laser beam through optical system such as a lens.

• The warning label and the proof label are attached to the product. Handle the product according to the instruction given on the label.

\* This product complies with 21 CFR 1040.10 and 1040.11 Laser Notice No. 50, dated June 24, 2007, issued by CDRH (Center for Devices and Radiological Health) under the FDA (Food and Drug Administration).

# PRECAUTIONS FOR PROPER USE

#### Sensor head

#### Mounting

- The light emitting and receiving surfaces of the sensor head must be free of water, oil, fingerprints, and other substances that refract light as well as dust, grit, and other objects that intercept light.
- Do not allow ambient light such as sunlight to directly hit the light receiving section of the sensor head. In particular, if precision is required, use this product by mounting a douser (or similar material) on the sensor head.
- A serial number is marked on each opposite surface of the light emitting and receiving surfaces of the sensor head. Use a pair of emitter and receiver that have the same serial number.
- For the installation of sensor heads, use M3 screws and tighten to the torque of 0.5 N·m. M3 screws are not provided with the product.

#### Controller

#### Mounting

#### Mounting

- 1. Insert the rear of the mounting part into the DIN rail.
- 2. While pressing down on the rear of the mounting part, insert the front of the mounting part into the DIN rail.

1. Press forward

#### **Removal method**

- 1. Grasp the product and push forward.
- 2. Lift the front to remove.

#### Attaching the sensor head connection cable

#### Mounting

1. Insert the sensor head connection cable into the connector for the sensor head connection cable on the controller.

#### **Removal method**

 Grasp the controller, and while pressing on the lock release lever on the connector of the sensor head connection cable, pull toward you to disconnect.

Note: If you attempt to disconnect the cable by pulling it without pressing the lock release lever, cable wire breakage and connector damage may occur.

#### Connection

- Always shut off the power before connecting a slave unit to or disconnecting a slave unit from the master unit. Risk of controller damage if you attempt connection with the power on.
- Insert the male connector firmly into the female connector. Risk of controller damage if not completely connected.
- When connecting slave units to a master unit, connect only NPN output types, or only PNP output types. Dissimilar output types cannot be connected together.

- To connect units, the units must be mounted on a DIN rail. Attach end plates **MS-DIN-E** (optional) so as to enclose the connected units at the ends.
- If the HG-TC controller is used together with the HG-SC controller for contact-type digital displacement sensor HG-S series, make sure to use the HG-SC controller manufactured in and after February, 2019. Furthermore, connect the slaves units of the same series to the side closer to the master unit and the slave units of the other series to the far side.

#### Common

#### Wiring

- The product is designed to fulfill the specifications when combined with the **HG-T**<sup> $\Box$ </sup> sensor head and **HG-T**<sup> $\Box$ </sup> controller. If the product is used in combination with other products, it not only fails to meet the specifications but also generates a malfunction in some cases.
- For the controller DC power supply, only use a power supply that is isolated by means of an isolation transformer or otherwise.
- Risk of short-circuiting and damage to the controller or power supply if a transformer such as an auto transformer is used. Risk of short-circuiting and damage to the controller or power supply if incorrectly mounted or connected.
- Make sure that the power supply is off while performing wiring or expansion work.
- After you have completed wiring work, check the wiring carefully before switching on the power.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- · Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Make sure that stress by forcible bend or pulling is not applied directly to the sensor cable joint.

#### Others

- · This device has been developed / produced for industrial use only.
- Do not use this product outside the range of the specifications. Risk of an accident and product damage. There is also a risk of a noticeable reduction of service life.
- Do not use during the initial transient time after the power supply is switched on.
- To ensure performance, use the product at least 30 minutes (warm-up time) after the power is turned ON.
- This product (controller and sensor head receiver) uses an EEPROM. The EEPROM has a service life of one million setting operations.
- This product is suitable for indoor use only.
- Avoid dust, dirt, and steam.
- Take care that the product does not come in direct contact with organic solvents such as thinner.
- Take care that the product does not come in direct contact with strong acid or alkaline.
- Take care that the product does not come in direct contact with oil or grease.
- Do not use in an environment containing inflammable or explosive gases.
- Performance may not be satisfactory in a strong electromagnetic field.
- The sensor head is watertight, but the connector is not dustproof, waterproofing, or corrosion-resistant due to its structural reasons, so measurements cannot be taken under the water or in the rain. Pay attention to the environment where the product is used.
- This product is a precision device. Do not drop or otherwise subject to shock. Risk of product damage.
- Never attempt to disassemble, repair, or modify the product.

#### HG-TSV10

#### Side view attachment (Optional)

#### Assembly dimensions

The diagram shows the attachment mounted on the receiver of the standard type sensor head **HG-T1010**. Can be installed in either direction.

Two M2 (length 4 mm 0.157 in) screws with washers are attached.

Notes: 1) The attachment cannot be installed to the slim type sensor head HG-T1110.2) Be sure to confirm proper detection using actual equipment in advance when using the attachment.
