**Compact**

Compact size despite the built-in controller and digital read out.

**Easy to embed in machines and production lines**

Controller installation and mounting space is not required because controller function is included in sensor unit.

**IP67 protective enclosure protects from water and dust**

Thanks to its IP67 protective enclosure, the HL-G1 can be used in the presence of water and dust. Mounting holes are lined with metal sleeves, allowing the instrument to be tightened securely in place with up to 0.8 N·m of torque.

**FUNCTIONS**

**Timing input and multi input**

In addition to timing input select the desired input according to your application:

- Zero set on / off
- Reset
- Memory switching
- Laser control
- Teaching
- Saving

**Support for both NPN and PNP polarity GLOBAL SUPPORT**

A single model number accommodates both NPN and PNP wiring polarity, reducing the number of model numbers that must be registered for maintenance purposes.

**Featuring 3 outputs and an analog 2 outputs**

With three outputs, the HL-G1 can be used to generate HI / GO / LOW judgment output or alarm output. The analog output can be used in both current and voltage modes.

**Memory switching function**

Up to four groups of sensor settings can be stored for fast recall. Easy switching among setting groups allows smooth setup changes.

**HIGH FUNCTION TYPE (HL-G1□-S-J / HL-G1□-RS-J)**

The integrated communications interface lets the sensor communicate with upstream devices such as PLCs.

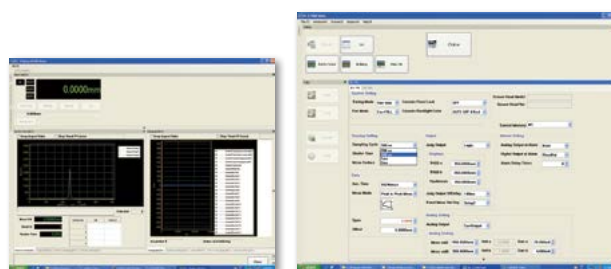

Sensors and other devices can be connected in a 1:1 manner using RS-422, or up to 16 **HL-G1** series sensors can be connected using RS-485, enabling them to return measured values in response to messages from the PLC. When using one of our PLCs\*, you can use the PLC's data write / read instructions (F145 and F146) to easily configure **HL-G1** series settings and acquire measurement output.

\* Supported PLCs from Panasonic Industrial Devices SUNX:  
**FP0R, FPΣ, FP-X**

**Software tool for sensor configuration and evaluation (Free download available)**

In addition to configuring up to 16 sensors at once, this free tool makes it easy to gather data needed for analysis, such as received light waveform monitoring and data buffering. The interface language can be selected at the time of installation.

- **Data buffering**  
Stores and displays measurement data, which can be superimposed on previously recorded data for easy comparison and analysis.
- **Received light waveform display**  
Displays the amount of light received by cell from light-receiving element.
- **Measured value display**  
Displays measured values as well as the output state for each terminal.

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were as follows: supply voltage 24 V DC, ambient temperature +20 °C +68 °F, sampling rate 500 μs, average number of samples: 1024, measurement center distance, object measured is made of white ceramic (specular reflection type: an aluminum vapor deposition surface reflection mirror) and analog measurement values.
- 2) This product complies with 21 CFR 1040.10 and 1040.11 Laser Notice No. 50, dated June 24, 2007, issued by CDRH (Center for Devices and Radiological Health) under the FDA (Food and Drug Administration).
- 3) This beam diameter is the size at the measurement center distance. These values were defined by using 1/e<sup>2</sup> (13.5 %) of the center light intensity. The results may be affected if there is a slight leakage of light outside the normal spot diameter and if the periphery surrounding the sensing point has a higher reflectivity than the sensing point itself.

  - 4) The sensor is of non-isolated type. Make sure that the potential difference between the sensor and RS-422 connecting device does not exceed 4 V. A difference in potential in excess may cause the connecting device or the sensor to malfunction.

### RS-485 1-to-N connection

- Connectable up to 16 units.
- Please set the prefix with no duplication.

- Notes:
- 1) The transmission data cable and reception data cable are both twisted-pair cables.
  - 2) The shield is connected to the 0 V side of the power supply line inside the sensor.
  - 3) Be sure to connect the signal ground.
  - 4) The sensor is of non-isolated type. Make sure that the potential difference between the sensor and RS-485 connecting device does not exceed 4 V. A difference in potential in excess may cause the connecting device or the sensor to malfunction.
  - 5) The sensor has a built-in terminating resistor. Be sure to turn ON the terminating resistor of the terminating sensor.
  - 6) Perform transition wiring for the transmission path.
  - 7) Connect the wires according to the specification of the equipment.
