UL File No.: E122222  
C-UL File No.: E122222

Pin type

Screw terminal type

### Features

- Bright and Easy-to-Read Display**  
A brand new bright 2-color back light LCD display. The easy-to-read screen in any location makes checking and setting procedures a cinch.
- Simple Operation**  
Seesaw buttons make operating the unit even easier than before.
- Short Body of only 64.5 mm 2.539 inch (screw terminal type) or 70.1 mm 2.760 inch (pin type)**  
With a short body, it is easy to install in even narrow control panels.
- Conforms to IP66's Weather Resistant Standards**  
The water-proof panel keeps out water and dirt for reliable operation even in poor environments.

- Screw terminal (M3.5) and Pin Types are Both Standard Options**  
The two terminal types are standard options to support either front panel installation or embedded installation.
- Changeable Panel Cover**  
Also offers a black panel cover to meet your design considerations.
- Compliant with UL, c-UL and CE.**

# LT4H-L Timers

UL File No.: E122222  
C-UL File No.: E122222

## Features

- Economically priced in anticipation of market needs.**
  - Economically priced to provide excellent cost performance.
- Display is a bright reflective-type LCD.**
- Inherits all of the characteristics of the LT4H digital timer.**
  - Seesaw switches ensure easy operation.
  - IP66 environmental protection.
  - Shortened body (70.1 mm 2.760 inch underhead).

4. Compliant with UL, c-UL and CE.

• Installation panel cut-out dimensions

The standard panel cut-out dimensions are shown below. Use the mounting frame (AT8-DA4) and rubber gasket (ATC18002).

• For connected installations

Note) 1: The installation panel thickness should be between 1 and 5 mm (.039 and .197 inch).  
2: For connected installations, the waterproofing ability between the unit and installation panel is lost.

# Setting the operation mode, time range, and time

## Setting procedure 1) Setting the operation mode and time range

Set the operation mode and time range with the DIP switches on the side of the LT4H timer.

### DIP switches

	Item	DIP switch	
		OFF	ON
1	Operation mode	Refer to table 1	
2			
3			
*4	Minimum input reset, start, and stop signal width	20 ms	1 ms
5	Time delay direction	Addition	Subtraction
6	Time range	Refer to table 2	
7			
8			

\* The 8-pin type does not have the stop input, so that the dip switch can be changed over between reset and start inputs. The signal range of the lock input is fixed (minimum 20 ms).

Table 1: Setting the operation mode

DIP switch No.			Operation mode
1	2	3	
ON	ON	ON	A: Power on delay 1
OFF	OFF	OFF	A2: Power on delay 2
ON	OFF	OFF	B: Signal on delay
OFF	ON	OFF	C: Signal off delay
ON	ON	OFF	D: Pulse One shot
OFF	OFF	ON	E: Pulse On delay
ON	OFF	ON	F: Signal Flicker
OFF	ON	ON	G: Totalizing On delay

Table 2: Setting the time range

DIP switch No.			Time range
6	7	8	
ON	ON	ON	0.001 s to 9.999 s
OFF	OFF	OFF	0.01 s to 99.99 s
ON	OFF	OFF	0.1 s to 999.9 s
OFF	ON	OFF	1 s to 9999 s
ON	ON	OFF	0 min 01 s to 99 min 59 s
OFF	OFF	ON	0.1 min to 999.9 min
ON	OFF	ON	0 h 01 min to 99 h 59 min
OFF	ON	ON	0.1 h to 999.9 h

- Notes: 1) Set the DIP switches before installing the timer.  
 2) When the DIP SW setting is changed, turn off the power once.  
 3) The DIP switches are set as ON before shipping.

## Setting procedure 2) Setting the time

Set the set time with the keys (UP and DOWN keys) on the front of the LT4H timer.

### Front display section

- ① Elapsed time display
- ② Set time display
- ③ Time delay indicator
- ④ Controlled output indicator
- ⑤ Reset indicator
- ⑥ Lock indicator
- ⑦ Time units display

- ⑧ UP keys  
Changes the corresponding digit of the set time in the addition direction (upwards)
- ⑨ DOWN keys  
Changes the corresponding digit of the set time in the subtraction direction (downwards)
- ⑩ RESET switch  
Resets the elapsed time and the output
- ⑪ LOCK switch  
Locks the operation of all keys on the unit

### • Changing the set time

**1. It is possible to change the set time with the up and down keys even during time delay with the timer.**

**However, be aware of the following points.**

1) If the set time is changed to less than the elapsed time with the time delay set to the addition direction, time delay will continue until the elapsed time reaches full scale, returns to zero, and then reaches the new set time. If the set time

is changed to a time above the elapsed time, the time delay will continue until the elapsed time reaches the new set time.

2) If the time delay is set to the subtraction direction, time delay will continue until "0" regardless of the new set time.

**2. If the set time is changed to "0," the unit will operate differently depending on the operation mode.**

1) If the operation mode is set to A (power on delay 1) or A2 (power on

delay 2), the output will turn on when the power supply is turned on. However, the output will be off while reset is being input.

2) In the other modes, the output turns on when the start is input. When the operation mode is C (signal off delay), D (Pulse one shot), or F (Signal flicker), only when the start input is on does the output turn on. Also, when the reset is being input, the output is off.

### • Power failure memory

**The EEPROM is used for power failure memory. It has a life of Min. 10<sup>5</sup> over-writings.**

**The EEPROM is overwriting with the following timing.**

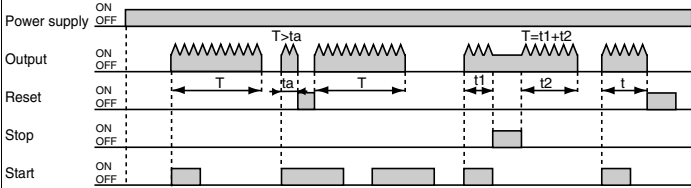

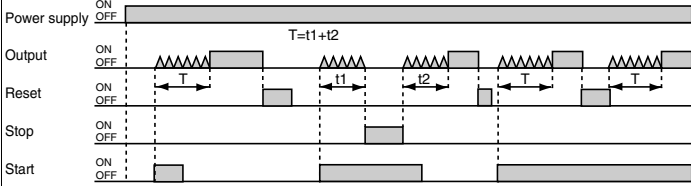

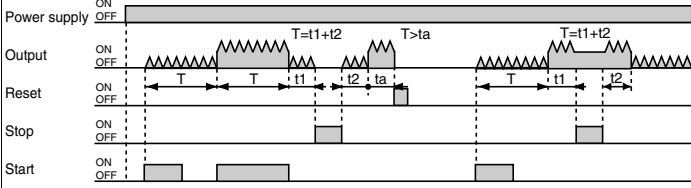

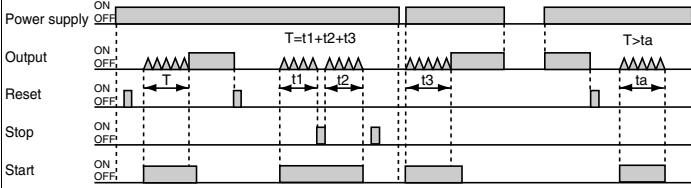

Output mode	Overwrite timing
Power ON delay (2) A2	When power is OFF
Addition G	Change of preset value or start, reset input When power is OFF after being ON
Other modes	When power is OFF after changing preset value

\* Be aware that the contents of EEPROM for all modes will be overwritten when power is turned OFF during input to external lock terminals ④ to ③ and ⑦ to ⑥. Such an action does not exist by doing lock operation from the front.
