Featuring optical absolute method in the slim and strong unit body

SENSOR HEAD

Robust and slim body contributes to a longer service life

Robust and slim body

Slim body like a pencil type sensor head

Hot-swappable

Bending-resistant cable

A bending-resistant cable provides peace of mind even when the sensor is installed on a movable tool.

Plain bearings with 2-point support structure

A new structure supports the spindle with upper and lower plain bearings to significantly increase rigidity to lateral loads.

Durability to withstand more than 200 million vertical sliding operations (typical value) (Note 1)

Notes: 1) Value on HG-S1010 / HG-S1110.
 2) Value on HG-S1010(R) / HG-S1110(R).
 3) Value calculated from the clearance of the upper and lower plain bearings.

The slim unit body contains plain bearings with 2-point support structure disperses load and achieves superb durability. The sensor head offers long life and reduces maintenance costs dramatically.

Optical absolute method

No "value skipping" or "unset zero point"

Displacement is measured by reading a glass scale with a different slit pattern at each reading position using a high-resolution sensor. This eliminates "value skipping" even when measuring at high speed, and there is no concern of "unset zero point".

Class-top accuracy

High-precision sensor head [HG-S1110(R)]

| | |
|---------------------------------------|--|
| Resolution 0.1 μm 0.004 mil | Indication accuracy Full range: 1.0 μm 0.039 mil or less Narrow range: 0.5 μm 0.020 mil or less |
|---------------------------------------|--|

| | |
|-------------------------------------|--|
| Resolution No.1* in class | Indication accuracy No.1* in class |
|-------------------------------------|--|

* As of June 2017, in-company survey.

Metal guide whirl-stop structure

Tip deviation amount of 35 μm 1.378 mil or less (typical value) (Note 3) [40 μm 1.575 mil or less (typical value) on the HG-S1032 (Note 3)]

Superb craftsmanship!

The accuracy and robustness of the **HG-S** series are backed by master craftsmanship.

The plain bearings are accurately aligned with the center of the spindle during their installation to the top and bottom sections of the body to ensure smooth sliding.

This process involves careful adjustment of each bearing by a skilled worker. Even though the plain bearing has a certain width, the clearance is managed to the accuracy of several μm .

Those with experience in mechanisms design will know that this value signifies amazingly high control precision.

The high-precision, robust sensor is made possible by master craftsmanship.

Maximize the high accuracy of our sensors in your pursuit of "ever higher levels of quality."

Resistance to lateral load

Lateral loads often occur in the workplace, so we conduct our own unique lateral load resistance testing. There is a reason why you can use this product with peace of mind for a long time.

Withstands more than 100 million sliding operations under application of lateral load (typical value) (Note 1)

Lateral load resistance
No.1* in class

* As of June 2017, in-company survey.

Example of a lateral load occurring in the workplace

Lateral load resistance test (Note 2)

Hitting the spindle laterally with a roller
We conducted our own unique lateral load resistance testing

<Test conditions>

Impact cycle: 13 times per second
Impact stroke: 1 mm 0.039 in

Notes:

- 1) Value on **HG-S1010** / **HG-S1110**.
- 2) Button-type probe for evaluation purposes was installed on the test sample for the lateral load resistance test.

Resistance to shock and vibration

Shock resistance: 200 G approx.

1,960 m/s² acceleration in X, Y and Z directions three times each

Vibration resistance: 20 G approx.

10 to 500 Hz frequency
(**HG-S1032**: 10 to 150 Hz frequency),
3 mm 0.118 in double amplitude
(Maximum acceleration 196 m/s²)
in X, Y and Z directions for two hours each

Vibration / shock resistance
No.1* in class

* As of June 2017, in-company survey.

Resistant to upward thrust impact

Spindle stopper installed at the lower section

Even if unexpected upward thrust occurs, the lower part of the spindle blocks the impact. Damage to the internal structure, including the glass scale, is minimized.

Hot-swappable

Change of sensor head without turning off the power supply

The sensor head can be changed safely without turning off the controller. This reduces the man-hours required for the change of line setup for processing of different workpieces, thus achieving a significant reduction of setup change time.

CONTROLLER

Versatile and easy-to-use controller

The controller features the industry's first* dual display and offers versatile functions and excellent ease of use. It allows simple and reliable operation of the advanced measurement function in a diversity of applications.

* As a sensor product using optical absolute method, as of September 2015 (according to in-company survey)

Dual display for added indication flexibility (equipped with NAVI function)

The 2-line digital display simultaneously shows head measurement (measured value) and judgment value (calculated value).

Industry's first!*

High-speed response of 3 ms in combination with any sensor head

All-direction LCD

The high-contrast LCD provides sharp and clear indications and wide viewing angle.

Equipped with intuitive circle meter

Values between allowable maximum and minimum values are indicated in green. Values outside of the allowable range are indicated in orange. This provides at-a-glance understanding of the margin to the tolerance limits.

Higher than maximum value

Lower than minimum value

Anytime selection of function to copy

The selective copy function significantly reduces the man-hours required for initial setting and maintenance.

Provided with maintenance mode useful on production floor

The following data are stored and can be used for analysis on the spot.

- Abnormal sensor head upward thrust value
- Number of sensor head upward thrusts
- Cumulative total number of sliding operations

Alarm setting for notification of upward thrust

Alarm can be set to notify an upward thrust (stroke) that exceeds the set level. This allows you to conduct a preventive maintenance before the sensor head generates a malfunction.

Easy-to-understand 2-line digital display

The 2-line digital display simultaneously shows sensor head measurement and judgment value.

Sub-screen: Displays sensor head measurement and other data.

Main screen: Displays judgment value.

Easy tolerance setting

Simple 1-point teaching

Align with master workpiece and press ENTER key for easy tolerance setting.

No need for trigger input

Equipped with self-trigger hold function

Easy setting of time length from measurement start to measurement stabilization.
Minimizes measurement fluctuation due to the vibration caused by stopping of spindle rotation.

(1) Static width setting

Stability range above the ST level can be set as desired.
Set the range where measurements are considered to be stable.

(2) Delay timer setting

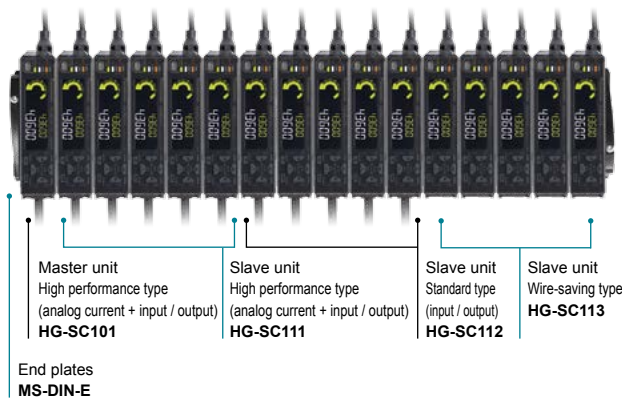

Desired delay time after measurement exceeding the ST level can be set.
Set the time required for stabilization of measurement.

Lateral connection of slave units for added operational ease

Connection of up to 15 slaves units

One master unit can be connected with up to 15 slave units in any order. This allows easy multi-point calculations.

(Example: Connection of 15 slave units)

End plates
MS-DIN-E

* End plates (optional) must be mounted on both sides of the controller after the connection of slave units.

Controller variations

- **Master unit (1 model)**
 - High performance type (analog current + input / output)
- **Slave unit (3 models)**
 - High performance type (analog current + input / output)
 - Standard type (input / output)
 - Wire-saving type

Hold function (9 types)

| | | |
|--------------------------|-----------------------------|-------------------|
| Sample hold (S-H) | Peak hold (P-H) | Bottom hold (B-H) |
| Peak-to-peak hold (P-P) | Peak-to-peak hold/2 (P-P/2) | |
| NG hold (NG-H) | Self-sample hold (SLF.S-H) | |
| Self-peak hold (SLF.P-H) | Self-bottom hold (SLF.B-H) | |

Calculation function (8 types)

| | | | |
|------------------------------|---------------------|--------------------|------------------------|
| MAX (maximum value) | MIN (minimum value) | FLAT (flatness) | AVERAG (average value) |
| STAND (reference difference) | TORSIN (torsion) | CURVEA (curvature) | THICK (thickness) |

COMMUNICATION UNIT FOR DIGITAL DISPLACEMENT SENSOR

Directly send the measurement values of multiple sensors to a host!

Communication unit for CC-Link IE Field / CC-Link

NEW

Communication unit for CC-Link IE Field
SC-HG1-CEF

iQSS support is planned

NEW

Communication Unit for CC-Link
SC-HG1-C

Supports iQSS

CC-Link IE Field

Communication speed: 1 Gbps

CC-Link

Communication speed: 10 Mbps (max.)

The communication unit can be used to connect directly to a CC-Link network. This lets you acquire digital data and ON / OFF information in real-time without a program. In addition, you can change controller settings and log measurement data via the CC-Link network, so you can also use the system for preventative maintenance of digital displacement sensors.

CC-Link IE Field

Connection of 1 master unit and up to 14 slave units (Note)

CC-Link

Connection of 1 master unit and up to 14 slave units (Note)

Note: When connected to a communication unit for digital displacement sensor, up to 14 slave units can be connected per master unit

Communication unit for RS-485

Communication unit for RS-485
SC-HG1-485

Communication speed: 1.2 kbps / 2.4 kbps / 4.8 kbps / 9.6 kbps / 19.2 kbps / 38.4 kbps / 57.6 kbps / 115.2 kbps

For use of high-precision measurement results as traceability data examples. Transfers not only measurements results obtained at multiple points but also setting statuses as digital data in a batch. Provides powerful support to the management of inspection records and identification of failure causes.

Note: When connected to a communication unit for digital displacement sensor, up to 14 slave units can be connected per master unit.

Connection of 1 master unit and up to 14 slave units (Note)

RS-485 communication protocol
MODBUS (RTU / ASCII): Connection of up to 99 stations
MEWTOCOL-COM: Connection of up to 64 stations

APPLICATIONS

AUTOMOTIVE APPLICATIONS

OTHER APPLICATIONS

Coupling assembly inspection

Installed height measurement

Motor shaft eccentricity measurement

Crankshaft dimension measurement

Screw head height measurement

X-Y stage position measurement

Transmission parts height measurement

Automotive parts dimension measurement

Tablet surface flatness measurement

Management of press-fit points of press-fit parts

Contact-type displacement sensor and load cell are used to manage pressure change point and stroke position for the confirmation of proper press-fit mounting.

Resin roller eccentricity measurement

| Weight | | Net weight: 80 g approx. | | | | Net weight: 150 g approx. |
| Accessories | | Standard type (HG-S1010 / HG-S1110 / HG-S1032): Sensor head fastening wrench 1 pc., Mounting nut 1 pc. Low measuring force type (HG-S1010R / HG-S1110R): Sensor head fastening wrench 1 pc., Mounting nut 1 pc., Rubber bellows 1 pc. | | | | |

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were as follows: standard type measurement probe (TR-S10-C), ambient temperature +20 °C +68 °F, and a clean atmosphere where dust and liquids such as water and oil do not come in contact with the equipment.
2) In the case of low measurement force type (HG-S1010R / HG-S1110R), measurements were obtained with products in standard configuration without rubber bellows.
3) Typical value near center of measurement.
4) Value calculated from the clearance of the upper and lower plain bearings.
5) Excludes damage and deterioration to rubber bellows due to external causes.
6) The probes (optional) are also available.

| Environmental resistance | | | IP40 (IEC) | | | | |
| Protection | | | IP40 (IEC) | | | | |
| Ambient temperature | | | -10 to +50 °C +14 to +122 °F (No dew condensation or icing allowed) (Note 5), Storage: -20 to +60 °C -4 to +140 °F | | | | |
| Ambient humidity | | | 35 to 85 % RH, Storage: 35 to 85 % RH | | | | |
| Voltage withstandability | | | 1,000 V AC for one min. between all supply terminals connected together and enclosure | | | | |
| Insulation resistance | | | 20 M Ω , or more, with 250 V DC megger between all supply terminals connected together and enclosure | | | | |
| Vibration resistance | | | 10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude (Maximum acceleration 49 m/s ²) in X, Y and Z directions for two hours each | | | | |
| Shock resistance | | | 98 m/s ² acceleration (10 G approx.) in X, Y and Z directions five times each | | | | |
| Material | | | Case: Polycarbonate, Cover: Polycarbonate, Switches: Polyacetal | | | | |
| Cable | | | 0.2 mm ² 2-core cable (brown and blue lead wires) / 0.15 mm ² 7-core composite cable, 2 m 6.562 ft long | 0.15 mm ² , 7-core composite cable, 2 m 6.562 ft long | 0.15 mm ² , 6-core cabletyre cable, 2 m 6.562 ft long | _____ | |
| Weight | | | Net weight: 140 g approx. | Net weight: 140 g approx. | Net weight: 130 g approx. | Net weight: 60 g approx. | |

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were as follows: supply voltage 24 V DC, ambient temperature +20 °C **+68 °F**.

2) When connected to a communication unit for digital displacement sensor, up to 14 slave units can be connected per master unit.

3) Current consumption does not include analog current output.

4) Linearity F.S. = 16 mA, and is linearity with respect to digitally measured values.

5) When slave units are connected to the master unit, the maximum sink current / source current of the control output and ambient temperature vary depending on the number of connected slave units as shown below.

| Number of connected slave units | Maximum sink current / source current of control output | Ambient temperature |
|---------------------------------|---|-------------------------------------|
| 1 to 7 units | 20 mA | -10 to +45 °C +14 to +113 °F |
| 8 to 15 units | 10 mA | |

6) Banks 1 to 3 can be selected by switching bank input A / B.

7) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.

SPECIFICATIONS

Communication units for digital displacement sensors

| Designation | Communication unit for CC-Link IE Field | |
|---|---|--|
| Item | Model No. | SC-HG1-CEF |
| CE marking directive compliance | EMC Directive, RoHS Directive | |
| Compatible controllers | HG-SC □ | |
| Maximum number of connectable controllers | Maximum of 15 controllers (one master, 14 slaves) per SC-HG1-CEF unit | |
| Supply voltage (Note 2) | 24 V DC ±10%, including ripple 0.5 V (P-P) | |
| Current consumption | 200 mA or less | |
| Communication method | CC-Link IE Field | |
| Remote station type | Remote device station | |
| Network No. setting | 1 to 239 (decimal) [1 to EF (hex)] (0 and 240 or more: Error) (Note 3) | |
| Cyclic transmission (Maximum number of links per station) | RX / RY: 128 points each (128 bits), 16 bytes RW r / RWw: 64 points each (64 words), 128 bytes | |
| Transient transmission | Server function only, data size 1,024 bytes | |
| Station No. setting | 1 to 120 (decimal) (0 and 121 or more: Error) | |
| Baud rate | 1 Gbps | |
| Transmission line types | Line, star (mixing of line and star types is possible), ring | |
| Maximum transmission distance | 100 m 328.084 ft | |
| Maximum number of connectable units | 121 units (1 master station, 120 slave stations) | |
| Cascade connection levels | Maximum 20 | |
| Pollution degree | 2 | |
| Operating altitude | 2,000 m 6561.680 ft or less (Note 4) | |
| Environmental resistance | Protection | IP40 (IEC) |
| | Ambient temperature | -10 to +45 °C +14 to +113 °F (No dew condensation or icing allowed) Storage: -20 to +60 °C -4 to +140 °F |
| | Ambient humidity | 35 to 85 % RH, Storage: 35 to 85 % RH |
| | Voltage withstandability | 1,000 V AC for one min. between all supply terminals connected together and enclosure |
| | Insulation resistance | 20 MΩ or more, with 250 V DC megger between all supply terminals connected together and enclosure |
| | Vibration resistance | 10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude in X, Y and Z directions for two hours each |
| | Shock resistance | 98 m/s ² acceleration (10 G approx.) in X, Y and Z directions five times each |
| | Material | Enclosure: Polycarbonate |
| | Communication cable | Ethernet cable that satisfies 1000BASE-T standard Category 5e or higher (Double-shielded / STP, straight cable) (Note 5) |
| | Weight | Net weight: 100 g approx., Gross weight: 150 g approx. |

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C **+68 °F**.
 2) Power is supplied from a connected controller / master controller.
 3) For the network No. setting on this product, convert the network number to hex and set the hex value.
 4) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.
 5) Use CC-Link Partner Association recommended cable.

| Designation | Communication unit for CC-Link | | | | | |
|---|--|---|------------------------------|------------------------------|--------------------------------|--|
| Item | Model No. | SC-HG1-C | | | | |
| CE marking directive compliance | EMC Directive (Note 2), RoHS Directive | | | | | |
| Compatible controllers | HG-SC □ | | | | | |
| Maximum number of connectable controllers | Maximum of 15 controllers (one master, 14 slaves) per SC-HG1-C unit | | | | | |
| Supply voltage (Note 3) | 24 V DC ±10 %, including ripple 0.5 V (P-P) | | | | | |
| Current consumption | 80 mA or less | | | | | |
| Communication method | Switchable CC-Link Ver.1.10 or 2.00 | | | | | |
| Remote station type | Remote device station | | | | | |
| Number of occupied station | CC-Link Ver.1.10: 4 stations, CC-Link Ver.2.00: Switchable 2 or 4 stations | | | | | |
| Station No. setting | 1 to 64 (0 and 65 or more: Error) | | | | | |
| Baud rate | 10 Mbps | 5 Mbps | 2.5 Mbps | 625 kbps | 156 kbps | |
| Maximum transmission distance | 100 m 328.084 ft | 160 m 524.934 ft | 400 m 1,312.336 ft | 900 m 2,952.756 ft | 1,200 m 3,937.008 ft | |
| Pollution degree | 2 | | | | | |
| Operating altitude | 2,000 m 6561.680 ft or less (Note 4) | | | | | |
| Environmental resistance | Protection | IP40 (IEC) | | | | |
| | Ambient temperature | -10 to +45 °C +14 to +113 °F (No dew condensation or icing allowed), Storage: -20 to +60 °C -4 to +140 °F | | | | |
| | Ambient humidity | 35 to 85 % RH, Storage: 35 to 85 % RH | | | | |
| | Voltage withstandability | 1,000 V AC for one min. between all supply terminals connected together and enclosure | | | | |
| | Insulation resistance | 20 MΩ or more, with 250 V DC megger between all supply terminals connected together and enclosure | | | | |
| | Vibration resistance | 10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude in X, Y and Z directions for two hours each | | | | |
| | Shock resistance | 98 m/s ² acceleration (10 G approx.) in X, Y and Z directions five times each | | | | |
| | Material | Enclosure: Polycarbonate | | | | |
| | Communication cable | Specified cable (shielded twisted cable) (Note 5) | | | | |
| | Weight | Net weight: 80 g approx., Gross weight: 130 g approx. | | | | |

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C **+68 °F**.
 2) If our product will be incorporated in a customer product that will comply with the EMC Directive, install our product in a conductive box in accordance with "PLC User's Manual [Published by Mitsubishi Electric Corporation]".
 3) Power is supplied from a connected controller / master controller.
 4) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.
 5) Use only a special-use communication cable that is approved by the CC-Link Partner Association.

| Designation | Communication unit for RS-485 | | |
|---------------------------------|--|--|--|
| Item | Model No. | SC-HG1-485 | |
| CE marking directive compliance | EMC Directive, RoHS Directive | | |
| Compatible controllers | HG-SC □ | | |
| Supply voltage (Note 2) | 24 V DC ±10 %, Ripple P-P 10 % or less (Within specified power supply voltage range) | | |
| Current consumption | 40 mA or less | | |
| Communication method | Two-wire half duplex communication | | |
| Synchronization method | Start-stop synchronization | | |
| Communication protocol | MODBUS (RTU / ASCII) / MEWTOCOL-COM | | |
| Baud rate | 1.2 kbps / 2.4 kbps / 4.8 kbps / 9.6 kbps / 19.2 kbps / 38.4 kbps / 57.6 kbps / 115.2 kbps | | |
| Electrical characteristics | Complies with EIA RS-485 | | |
| Number of connectable units | Host (RS-485) | 1 to 99 units when MODBUS (RTU / ASCII) is used, 1 to 64 units when MEWTOCOL-COM is used | |
| | Sensors | Maximum of 15 controllers (1 master, 14 slaves) per SC-HG1-485 unit | |
| Stop bit length | 1 bit / 2 bits | | |
| Parity check | Even / Odd / None | | |
| Data bit length | 8 bits (RTU) / 7 bits (ASCII) | | |
| Pollution degree | 2 | | |
| Operating altitude | 2,000 m 6561.68 ft or less (Note 3) | | |
| Environmental resistance | Protection | IP40 (IEC) | |
| | Ambient temperature | -10 to +45 °C 14 to +113 °F (No dew condensation or icing allowed), Storage: -20 to +60 °C -4 to +140 °F | |
| | Ambient humidity | 35 to 85 % RH, Storage: 35 to 85 % RH | |
| | Voltage withstandability | 1,000 V AC for one min. between all supply terminals connected together and enclosure | |
| | Insulation resistance | 20 MΩ, or more, with 250 V DC megger between all supply terminals connected together and enclosure | |
| | Vibration resistance | 10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude in X, Y and Z directions for two hours each | |
| | Shock resistance | 98 m/s ² acceleration (10 G approx.) in X, Y and Z directions five times each | |
| | Material | Enclosure: Polycarbonate | |
| | Total extension distance | Communication cable: 1,200 m 3,937.008 ft or less between SC-HG1-485 (terminal) and PLC | |
| | Weight | Net weight: 75 g approx., Gross weight: 120 g approx. | |
| Accessory | Termination resistor switching jumper pin: 1 pc. | | |

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C **+68 °F**.
 2) Power is supplied from a connected controller / master controller.
 3) Do not use or store in an environment that has been pressurized to an air pressure higher than the atmospheric pressure at 0 m.

Refer to the user's manual for details. The user's manual can be downloaded from our website. Refer to p.1595 for general precautions.

PRECAUTIONS FOR PROPER USE

- Never use this product as a sensing device for personnel protection.
- When using sensing devices for personnel protection, use products that meet the laws and standards for personnel protection that apply in each region or country, such as OSHA, ANSI and IEC.

• This catalog has been prepared to aid selection of appropriate products. When using the product, be sure to read the user's manual.

Part description

Standard type

<Standard type>
(HG-S1010 / HG-S1110)

<Standard type>
(HG-S1032)

<Low measuring force type>
(HG-S1010R / HG-S1110R)

Controller

Note: Not provided on slave units or wire-saving type (HG-SC113).

Sensor head

Mounting

- When tightening the nut, take care not to damage the rubber bellows.
- If the rubber bellows is deformed, a load will occur when the spindle operates and damage may result.
- Do not remove the rubber bellows from the standard type products (HG-S1010 / HG-S1110 / HG-S1032) except for when replacing them. Unnecessary removal of rubber bellows can result in entry of dust and water, thus causing malfunction.

1. Open a hole in the housing in which the sensor head will be mounted.

2. Insert the sensor head into the hole you opened in the housing, and fasten provisionally with the provided mounting nut.

Note: The orientation of the mounting nut depends on the thickness of the housing. For details, refer to **DIMENSIONS** (p.1107~).

3. Fasten the sensor head. When fastening the sensor head, tighten the mounting nut with a wrench while holding the sensor head in place with the provided sensor head fastening wrench as shown right. Tighten to a torque of 12.5 N·m or less. (HG-S1032: 15 N·m or less)

4. Make sure that the rubber bellows has not become deformed as shown right. If the rubber bellows is deformed, restore the normal shape by rotating the bellows or otherwise.

Attaching the sensor head connection cable

- When disconnecting, always make sure that the fastening ring has been completely loosened before pulling out the cable.
- Risk of damage if you pull the cable with excessive force (15 N or more) with the fastening ring tightened.

Mounting

1. Insert the sensor head connection cable into the connector for the sensor head connection cable on the sensor head.
2. Turn the fastening ring on the sensor head connector in the direction shown to fasten the ring.

Removal method

1. Turn the fastening ring on the sensor head connector in the direction of the arrow to loosen the ring.
2. Grasp the sensor head connector and pull up to remove.

PRECAUTIONS FOR PROPER USE

Refer to the user's manual for details. The user's manual can be downloaded from our website.
Refer to p.1595 for general precautions.

Controller**Mounting****Mounting**

1. Insert the rear of the mounting part into the DIN rail.
2. While pressing down on the rear of the mounting part, insert the front of the mounting part into the DIN rail.

**Removal method**

1. Grasp the product and push forward.
2. Lift the front to remove.

**Attaching the sensor head connection cable****Mounting**

1. Insert the sensor head connection cable into the connector for the sensor head connection cable on the controller.

**Removal method**

1. Grasp the controller, and while pressing on the lock release lever on the connector of the sensor head connection cable, pull toward you to disconnect.

Note: If you attempt to disconnect the cable by pulling it without pressing the lock release lever, cable wire breakage and connector damage may occur.

Connection

- Always shut off the power before connecting a slave unit to or disconnecting a slave unit from the master unit. Risk of controller damage if you attempt connection with the power on.
- Insert the male connector firmly into the female connector. Risk of controller damage if not completely connected.
- To connect units, the units must be mounted on a DIN rail. Attach end plates **MS-DIN-E** (optional) so as to enclose the connected units at the ends.
- Up to 15 slave units (up to 14 slave units when a communication unit for digital displacement sensor is connected) can be connected per master unit.
- When connecting slave units to a master unit, connect only NPN output types, or only PNP output types. Dissimilar output types cannot be connected together.

Connection method

1. Mount one master unit on the DIN rail.
2. Remove the connector cover.
3. Mount each slave unit one at a time on the DIN rail. Remove all connector covers except for the cover on the end slave unit.
4. Slide each slave unit to connect the female and male connectors.
5. Attach end plates **MS-DIN-E** (optional) with the flat side facing in so as to enclose the connected units at the ends.
6. Tighten the screws to fasten the end plates.

**Removal method**

1. Loosen the screws on the end plates
2. Remove the end plates.
3. Slide and remove the controllers, one at a time.

**Common****Wiring**

- The product is designed to fulfill the specifications when combined with the **HG-S** sensor head and **HG-SC** controller. If the product is used in combination with other products, it not only fails to meet the specifications but also generates a malfunction in some cases.
- For the controller DC power supply, only use a power supply that is isolated by means of an isolation transformer or otherwise.
- Risk of short-circuiting and damage to the controller or power supply if a transformer such as an auto transformer is used. Risk of short-circuiting and damage to the controller or power supply if incorrectly mounted or connected.

- Make sure that the power supply is off while performing wiring or expansion work.
- After you have completed wiring work, check the wiring carefully before switching on the power.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Do not use during the initial transient time after the power supply is switched on.
- Make sure that stress by forcible bend or pulling is not applied directly to the sensor cable joint.

Others

- This device has been developed / produced for industrial use only.
- Do not use this product outside the range of the specifications. Risk of an accident and product damage. There is also a risk of a noticeable reduction of service life.
- This controller uses an EEPROM. The EEPROM has a service life of one million setting operations.
- This product is suitable for indoor use only.
- Avoid dust, dirt, and steam.
- Take care that the product does not come in direct contact with organic solvents such as thinner.
- Take care that the product does not come in direct contact with strong acid or alkaline.
- Take care that the product does not come in direct contact with oil or grease.
- Do not use in an environment containing inflammable or explosive gases.
- Performance may not be satisfactory in a strong electromagnetic field.
- This product is a precision device. Do not drop or otherwise subject to shock. Risk of product damage.
- Never attempt to disassemble, repair, or modify the product.
