5. Functionality Details

5-1. Sound Group

The sound groups that can be played back are selectable from eight groups of A through H with the Mode Switch (DIPSW). (For bit input)

A sound group cannot be selected when "(2) channel input method" is set for binary.

Sounds for group H can be rearranged freely.

In order to transfer the setting data, the SD card can be used for recombination and transmitting it to the product. Setting data is created as regular data in a text format and the name is saved as OTO-LIST.TXT.

Refer to "8. Sound List" for the Mode Switch (DIPSW) and sound group combination which can be selected.

^{*} Refer to "8. Sound List" for the sound numbers.

^{*} Factory Setting: Group A

5-2. Channel Input Method

Channel input mode can be selected for bit/binary with the Mode Switch (DIPSW).

With the bit input, channels 1-8 can be used to reproduce up to eight channels. (When sound reduction is OFF) With the binary input, channels 1-6 can be used to reproduce up to 32 channels.

5-3. Sound Reduction

- (5) Forced Playback OFF

With the sound reduction function turned ON, when a signal input is put on channel 8, the sound level is reduced at playback.

The sound pressure for the sound reduction can be preset. (-10dB,-20dB,-30dB) The Sound Reduction Function can be selected with the Mode Switch (DIPSW). When the Sound Reduction Function is turned ON, the number of channels available for playback in the Bit Input Mode is set to seven.

^{*} Factory Setting: No Sound Reduction

<u></u>	-20dB
<u></u>	-30dB

- (5) Forced Playback ON

With a Forced Playback, if a signal line input occurs, the playback sound can be reduced. The sound reduction level can be selected by the channel input. Priority rank is channel3>channel2>channel1.

- Factory Mode -- The audible sound is suitable as a warning alarm.
- PA Mode -- The audible sound is suitable for public announcements.

5-5. Forced Playback

When the Forced Playback mode is turned ON, it will play back after power is supplied, even with no signal input. It can be used for testing the playback volume or when controlled by power supply start-up.

The Forced Playback is selected for ON/OFF with the Mode Switch (DIPSW).

The sound (channel) to play back can be selected by the Mode Switch (DIPSW).

6. Timing Chart

It only plays back while the signal input is maintained.

Playback will be stopped as soon as the signal input is lost.

Repetitive playback occurs when the signal input is maintained.

- Channel Input Method : Bit Input

- * All channels above 5 are the same.
- * The wavy line indicates playback is stopped, and the channel corresponding to the changed signal input (Playback) is reproduced.

- Channel Input Method : Binary Input

- * All channels above 5 are the same.
- * The wavy line indicates when playback was stopped and the sound which was the changed signal input (Playback) is played.
