## Product Specification

## PE4245

## Product Description

The PE4245 RF Switch is designed to cover a broad range of applications from near DC to 4000 MHz . This switch integrates on-board CMOS control logic with a low voltage CMOS compatible control input. Using a +3-volt nominal power supply voltage, a 1 dB compression point of +27 dBm can be achieved. The PE4245 also exhibits excellent isolation of better than 42 dB at 1000 MHz and is offered in a small $3 \times 3$ mm DFN package.

The PE4245 is manufactured on Peregrine's UltraCMOS ${ }^{\text {TM }}$ process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

Figure 1. Functional Diagram

## SPDT UltraCMOS ${ }^{\text {TM }}$ RF Switch

 DC - 4000 MHz
## Features

Single 3.0 V Power Supply
Low insertion loss: 0.6 dB at 1000 MHz ,
0.7 dB at 2000 MHz

High isolation of 42 dB at 1000 MHz ,
32 dB at 2000 MHz
Typical 1 dB compression of +27 dBm
Single-pin CMOS logic control
Available in a 6-lead DFN package

Figure 2. Package Type
6-lead DFN

Table 1. Electrical Specifications $@+\mathbf{2 5}^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{DD}}=\mathbf{3} \mathbf{V}(\mathrm{ZS}=\mathrm{ZL}=50 \Omega)$

| Parameter | Conditions | Minimum | Typical | Maximum | Units |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Operation Frequency ${ }^{1}$ |  | DC |  | 4000 | MHz |
| Insertion Loss | 1000 MHz |  | 0.6 | 0.75 | dB |
| 2000 MHz |  | 0.7 | 0.85 | dB |  |
| Isolation - RFC to RF1/RF2 | 1000 MHz | 2000 MHz | 39 | 42 |  |
| Isolation - RF1 to RF2 | 1000 MHz |  |  |  |  |
| 2000 MHz | 30 | 32 |  |  |  |
| Return Loss | 1000 MHz | 27 | 36 | dB |  |
| 'ON' Switching Time | CTRL to 0.1 dB final value, 2 GHz | 21 | 23 | dB |  |
| 'OFF' Switching Time | CTRL to 25 dB isolation, 2 GHz |  | 200 | dB |  |
| Video Feedthrough ${ }^{2}$ |  |  | 90 | ns |  |
| Input 1 dB Compression | 2000 MHz |  | 15 | ns |  |
| Input IP3 | 26 | 27 | mV |  |  |

Notes: 1. Device linearity will begin to degrade below 10 MHz .
2. The DC transient at the output of any port of the switch when the control voltage is switched from Low to High or High to Low in a $50 \Omega$ test set-up, measured with 1 ns risetime pulses and 500 MHz bandwidth.

Figure 3. Pin Configuration

Table 2. Pin Descriptions

| Pin <br> No. | Pin <br> Name | Description |
| :---: | :---: | :--- |
| 1 | RF2 | RF2 port (Note 1) |
| 2 | GND | Ground Connection. Traces should be <br> physically short and connected to the <br> ground plane. This pin is connected to <br> the exposed solder pad that also must <br> be soldered to the ground plane for best <br> performance. |
| 3 | RF1 | RF1 port (Note 1) |
| 4 | VDD | Nominal 3 V supply connection. |
| 5 | CTRL | CMOS logic level: <br> High = RFC to RF1 signal path <br> Low = RFC to RF2 signal path |
| 6 | RFC | Common RF port for switch (Note 1) |

Notes: 1. All RF pins must be DC blocked with an external series capacitor or held at $0 \mathrm{~V}_{\mathrm{DC}}$.

Table 3. Operating Ranges

| Parameter | Min | Typ | Max | Units |
| :--- | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{DD}}$ Power Supply Voltage | 2.7 | 3.0 | 3.3 | V |
| $\mathrm{I}_{\mathrm{DD}}$ Power Supply Current <br> $\mathrm{V}_{\mathrm{DD}}=3 \mathrm{~V}, \mathrm{~V}_{\text {CTRL }}=3 \mathrm{~V}$ |  | 250 | 500 | nA |
| T <br> Tap Operating temperature | -40 |  | 85 | ${ }^{\circ} \mathrm{C}$ |
| Control Voltage High | 0.7 x <br> $\mathrm{V}_{\mathrm{DD}}$ |  |  | V |
| Control Voltage Low |  |  | 0.3 x <br> $\mathrm{V}_{\mathrm{DD}}$ | V |

## Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the
PE4245 in the 6-lead 3x3 DFN package is MSL1.

Table 4. Absolute Maximum Ratings

| Symbol | Parameter/Conditions | Min | Max | Units |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{DD}}$ | Power supply voltage | -0.3 | 4.0 | V |
| $\mathrm{~V}_{\mathrm{I}}$ | Voltage on any input | -0.3 | $\mathrm{V}_{\mathrm{DD}}+$ <br> 0.3 | V |
| $\mathrm{~T}_{\mathrm{ST}}$ | Storage temperature range | -65 | 150 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{P}_{\mathrm{IN}}$ | Input power (50 $)$ |  | 30 | dBm |
| $\mathrm{V}_{\text {ESD }}$ | ESD voltage (Human Body <br> Model) |  | 1500 | V |

Exceeding absolute maximum ratings may cause permanent damage. Operation should be restricted to the limits in the Operating Ranges table. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

Table 5. Control Logic Truth Table

| Control Voltage | Signal Path |
| :--- | :--- |
| CTRL = CMOS High | RFC to RF1 |
| CTRL = CMOS Low | RFC to RF2 |

## Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS ${ }^{\text {TM }}$ device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in Table 4.

## Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS ${ }^{\text {™ }}$ devices are immune to latch-up.

## Evaluation Kit

The SPDT Switch Evaluation Kit board was designed to ease customer evaluation of the PE4245 SPDT switch. The RF common port is connected through a $50 \Omega$ transmission line to the top left SMA connector, J1. Port 1 and Port 2 are connected through $50 \Omega$ transmission lines to the top two SMA connectors on the right side of the board, J2 and J3. A through transmission line connects SMA connectors J4 and J5. This transmission line can be used to estimate the loss of the PCB over the environmental conditions being evaluated.

The board is constructed of a two metal layer FR4 material with a total thickness of 0.031 ". The bottom layer provides ground for the RF transmission lines. The transmission lines were designed using a coplanar waveguide with ground plane model using a trace width of 0.0476 ", trace gaps of 0.030 ", dielectric thickness of 0.028 ", metal thickness of 0.0021" and $\varepsilon_{\mathrm{r}}$ of 4.4.

J6 provides a means for controlling DC and digital inputs to the device. Starting from the lower left pin, the second pin to the right (J6-3) is connected to the device CTRL input. The fourth pin to the right (J6-7) is connected to the device $\mathrm{V}_{\mathrm{DD}}$ input.

## Data Sheet Identification

## Advance Information

The product is in a formative or design stage. The data sheet contains design target specifications for product development. Specifications and features may change in any manner without notice.

## Preliminary Specification

The data sheet contains preliminary data. Additional data may be added at a later date. Peregrine reserves the right to change specifications at any time without notice in order to supply the best possible product.

## Product Specification

The data sheet contains final data. In the event Peregrine decides to change the specifications, Peregrine will notify customers of the intended changes by issuing a DCN (Document Change Notice).

The information in this data sheet is believed to be reliable. However, Peregrine assumes no liability for the use of this information. Use shall be entirely at the user's own risk.

No patent rights or licenses to any circuits described in this data sheet are implied or granted to any third party.

Peregrine's products are not designed or intended for use in devices or systems intended for surgical implant, or in other applications intended to support or sustain life, or in any application in which the failure of the Peregrine product could create a situation in which personal injury or death might occur. Peregrine assumes no liability for damages, including consequential or incidental damages, arising out of the use of its products in such applications.

The Peregrine name, logo, and UTSi are registered trademarks and UltraCMOS, HaRP, MultiSwitch and DuNE are trademarks of Peregrine Semiconductor Corp.
