

Product Specification PE42556 Flip Chip

Product Description

The PE42556 RF Switch is designed for use in Test/ATE, cellular and other wireless applications. This broadband general purpose switch maintains excellent RF performance and linearity from 9kHz through 13500 MHz. The PE42556 integrates on-board CMOS control logic driven by a single-pin, low voltage CMOS control input. It also has a logic select pin which enables changing the logic definition of the control pin. Additional features include a novel user defined logic table, enabled by the on-board CMOS circuitry. The PE42556 also exhibits excellent isolation of 26 dB at 13500 MHz, fast settling time, and is offered in a tiny Flip Chip package.

The PE42556 is manufactured on Peregrine's UltraCMOS[™] process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate, offering the performance of GaAs with the economy and integration of conventional CMOS.

SPDT UltraCMOS[™] RF Switch 9 kHz - 13500 MHz

Features

- HaRPTM-Technology-Enhanced
 - Eliminates Gate Lag
 - No insertion loss or phase drift
 - Fast settling time
- Next Gen 0.25 µm Process Technology
- Single-pin 3.3 V CMOS logic control
- High Isolation: 26 dB@ 13.5 GHz
- Low Insertion Loss: 1.7 dB @ 13.5 GHz
- P1dB: 33 dBm typical
- Return Loss: 13 dB @ 13.5 GHz (typ)
- IIP3: +56 dBm typical
- Exceptional ESD: 4000 V HBM
- Absorptive Switch Design
- Flip Chip packaging

RF1 (B) GND	RFC	RF2 (4) GND
(7)	(6)	(5)

Table 2. Bump Descriptions

Bump No.	Bump Name	Description
1	V_{SS}	Negative supply voltage or GND connection (Note 3)
2, 13, 14	D-GND	Digital Ground
3, 5, 7, 9	GND	Ground
4	RF2	RF Port 2
6	RFC	RF Common
8	RF1	RF Port 1
10	LS	Logic Select - Used to determine the definition for the CTRL pin (see Table 5)
11	V _{DD}	Nominal 3.3 V supply connection
12	CTRL	CMOS logic level

Note: 3. Use VSS (bump 1, VSS = -VDD) to bypass and disable internal negative voltage generator. Connect VSS (bump 1) to GND (VSS = 0V) to enable internal negative voltage generator.

Table 3. Operating Ranges

Parameter	Min	Тур	Max	Units
V _{DD} Positive Power Supply Voltage	3.0	3.3	3.6	V
V _{DD} Negative Power Supply Voltage	-3.6	-3.3	-3.0	V
I_{DD} Power Supply Current (V _{ss} = -3.3V, V _{DD} = 3.0 to 3.6V, -40 to +85 °C)		8.0	12.5	μA
I_{DD} Power Supply Current ($V_{ss} = 0V, V_{DD} = 3.0$ to 3.6V, -40 to +85 °C)		21.5	29.0	μA
$\label{eq:lss} \begin{array}{l} I_{SS} \mbox{ Negative Power Supply} \\ Current \\ (V_{ss} = -3.3V, \ V_{DD} = 3.0 \ to \\ 3.6V, \ -40 \ to \ +85 \ ^{\circ}C) \end{array}$		-18.0	-24.0	μA
Control Voltage High	$0.7 \mathrm{xV}_{\mathrm{DD}}$			V
Control Voltage Low			$0.3 x V_{DD}$	V
P _{IN} RF Power In⁴ (50Ω): 9 kHz ≤ 1 MHz 1 MHz ≤ 13.5 GHz			fig. 4,5 30	dBm dBm

Note: 4. Please consult Figures 4 and 5 (low-frequency graphs) for recommended low-frequency operating power level.

Table 4. Absolute Maximum Ratings

Symbol	Parameter/Conditions	Min	Max	Units
V _{DD}	Power supply voltage	-0.3	4.0	V
Vi	Voltage on any input except for CTRL and LS inputs	-0.3	V _{DD} + 0.3	V
V _{CTRL}	Voltage on CTRL input		4.0	V
V _{LS}	Voltage on LS input		4.0	V
T _{ST}	Storage temperature range	-65	150	S°
T _{OP}	Operating temperature range	-40	85	S
P _{IN} ⁵ (50Ω)	9 kHz ≤ 1 MHz		fig. 4,5	dBm
$\Gamma_{\rm IN}^{-1}(5022)$	1 MHz ≤ 13.5 GHz		30	dBm
V	ESD voltage (HBM) ⁶		4000	V
V _{ESD}	ESD voltage (Machine Model)		300	V

Note: 5. Please consult Figures 4 and 5 (low-frequency graphs) for recommended low-frequency operating power level.

6. Human Body Model (HBM, MIL_STD 883 Method 3015.7)

Exceeding absolute maximum ratings may cause permanent damage. Operation should be restricted to the limits in the Operating Ranges table. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS[™] device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified.

Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS[™] devices are immune to latch-up.

Table 5. Control Logic Truth Table

LS	CTRL	RFC-RF1	RFC-RF2
0	0	off	on
0	1	on	off
1	0	on	off
1	1	off	on

Logic Select (LS)

The Logic Select feature is used to determine the definition for the CTRL pin.

Spurious Performance

The typical spurious performance of the PE42556 is -116 dBm when VSS=0V (bump 1 = GND). If further improvement is desired, the internal negative voltage generator can be disabled by setting VSS = -VDD.

Switching Frequency

The PE42556 has a maximum 25 kHz switching rate when the internal negative voltage generator is used (bump1=GND). The rate at which the PE42556 can be switched is only limited to the switching time (Table 1) if an external negative supply is provided (bump1=VSS).

Low Frequency Power Handling: $Z_L = 50\Omega$

Figure 4 provides guidelines of how to adjust the Vdd and Input Power to the PE42556 device. The upper limit curve represents the maximum Input Power vs Vdd recommended for this part at low frequencies only. Please consult Table 3 for the 1 MHz \leq 13.5 GHz range.

vs. Vdd and Input Power @ 9 KHz — Upper Power Limit

Figure 4. Maximum Operating Power Limit

6 4 Input Power (dBm) 2 0 -2 -4 -6 -8 -10 -12 2.9 3 3.1 3.2 3.3 3.4 3.5 3.6 Vdd (V)

To allow for sustained operation under any load VSWR condition, max power should be kept 6dB lower than max power in 50 Ohm.

Figure 5 shows how the power limit in Figure 4 will increase with frequency. As the frequency increases, the contours and Maximum Power Limit Curve will increase with the increase in power handling shown on the curve.

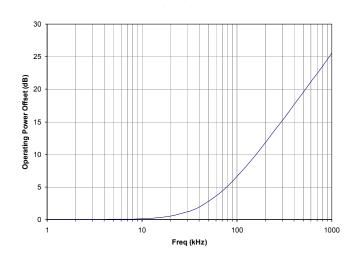

Figure 5. Operating Power Offset vs. Frequency (Normalized to 9kHz)

Power Handling Examples

Example 1: Maximum power handling at 100 kHz, Z=50 ohms, VSWR 1:1, and Vdd=3V

- The power handling offset for 100 kHz from *Fig. 5* is 7 dB
- The max power handling at Vdd = 3 V is 5.5 dB from *Fig. 4*
- Derate power under mismatch conditions
- Total maximum power handling for this example is 7 dB + 5.5 dB = 12.5 dBm

Evaluation Kit

The SPDT switch EK Board was designed to ease customer evaluation of Peregrine's PE42556 (dual use with PE42554). The RF Common port is connected through a 50ohm transmission line via the top SMA connector, J1. RF1 and RF2 are connected through 50ohm transmission lines via SMA connectors J3, and J2, respectively. A through 50ohm transmission line is available via SMA connectors J4 and J5. This transmission line can be used to estimate the loss of the PCB over the environmental conditions being evaluated.

The board is constructed of a four metal layers with a total thickness of 62 mils. The top and bottom layers are ROGERS RO4003 material with an 8 mil core and Er=3.55. The middle layers provide ground for the transmission lines. The RF transmission lines were designed using a coplanar waveguide with ground plane model using a trace width of 15 mils, and trace gaps of 10 mils.

Data Sheet Identification

Advance Information

The product is in a formative or design stage. The data sheet contains design target specifications for product development. Specifications and features may change in any manner without notice.

Preliminary Specification

The data sheet contains preliminary data. Additional data may be added at a later date. Peregrine reserves the right to change specifications at any time without notice in order to supply the best possible product.

Product Specification

The data sheet contains final data. In the event Peregrine decides to change the specifications, Peregrine will notify customers of the intended changes by issuing a CNF (Customer Notification Form).
