#### Description

The PI6C6612 is a precision clock generator designed to provide synchronous clock signals for digital audio applications with sampling clock rates derived from an MPEG stream. The device can also be used as a standalone clock source with a 27 MHz crystal.

Split power supply pins and ground pins help to provide excellent phase noise and long term jitter performance for superior synchronization and Signal-to-Noise ratio.

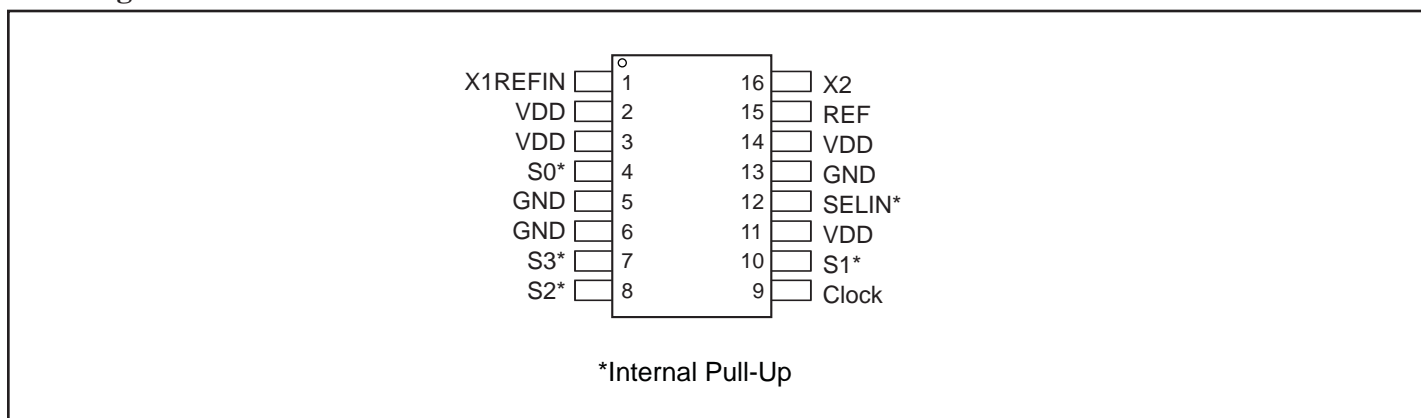

PI6C6612 is one example of Pericom's multimedia clock products, if you have other applications for custom clock designs, either with different clock input or output that is not specified here, please contact Pericom.
